Administration Encounter by computer link Message from DeCHAT ANP (P3) Vikki Cathcart with reply; Hi Vikki, Nice to hear from you. There is nothing obvious on the meds list that is known for causing postural hypotension, apart from amisulpride as you said, which is noted to cause dose related postural hypotension, but I would not want to alter that either without a referral. I do note however a letter in his file from Wedderburn dated 27/05/25 stating he failed to attend his last review appointment on that date and has missed several app'ts the last 5 years and does not appear to have been seen since 2019, so perhaps a referral may be beneficial? BP this AM was looking better, hopefully the previous changes are starting to work, I would continue to monitor and see if he becomes symptomatic again. Perhaps a referral to POA may be needed if he becomes symptomatic of the drop again? Other than that, I do not think there are anymore medication factors we could review, and perhaps keep an eye on BMs/HbA1c for any dizziness related to this? Maybe POA could explore the recreational drug suspicion also if a referral was deemed? Thanks Louise Hi Louise, My colleague has been in touch with you recently regarding this gentleman due to a postural drop. Following medication changes there was no improvement and the drop was fairly marked 137/68 >78/54 which he was symptomatic - dizzy and lightheaded. Nurses attended this am and his Bp was found to have improved sitting 126/79 standing 104/71 (1min) and 111/78 (3min) prior to having his medications and was asymptomatic. I'm aware you have previously reviewed his medications - are there any other culprit medications that could be contributing? I note he is taking Amisulpride 250mg bd which I would not be keen to change and would need to refer back to POA. There is also a suspicion that he is using recreational drugs but this is unconfirmed. Any advice would be appreciated. Kind regards, Vikki Cathcart, Advanced Nurse Practitioner/ Non Medical Prescriber Dundee Enhanced care at Home Team (DECaHT)

Diagnosis Postural hypotension ANP discussion with cluster SN V (P3) Anderson Symptomatic postural hypotension Postural BP checked today, significant drop remains - 137/68 sitting, 78/54 standing. Quite unsteady on feet. Several medication changes made - Furosemide, Solifenacin and Glucalazide stopped. Dihydrocodeine reduced. Compression stockings fitted today for the first time. Plan - cluster nurses will recheck postural BPs in 1 week after wearing stockings. Postural advice given re. managing dizziness.

Intervention (P3) Review of care plan DECaHT entry. Reviewed by DECaHT nurses today for L+S bp post stopping furosemide and BM check. Note HbA1c 49mmols. Spoke to RN M.Rudd who visited Stuart today with CN F. Stephen. Stuart reports he is still feeling a little dizzy. BP today 108/68 sitting and standing 83/68 despite stopping furosemide. Note entry from pharmacist L.Kirkcaldy 15/07/25 re Solifenacin. Discussed with DECaHT geriatricians and agreed stop Solifenacin. Diabetic medication also reviewed and agreed to stop Gliclazide given recent HbA1c of 49mmols. BM today 7.7mmols. Boots lochee contacted and will update changes for Vena link for delivery on Friday. DECaHT nurses will take vena link to boots lochee tomorrow to remove meds and boots lochee to re delivery vena link tomorrow. For review Thursday. For L+S BP and BM check.

15-July-2025 Ms Louise Kirkcaldy Medicine Management

Intervention (P3) Referral to pharmacist Request for medication review in regards to postural drop/dizziness from DECHAT as per OPIC 08/07/25. DECHAT have already spoken to NP, who has stopped furosemide to try and minimise postural drop. ANPs have also visited 14/07 - agree with plan that has been put in place, including putting DHC in venalink to aid with dosing. OPIC states that pt has pain controlled on paracetamol only, however note entry from today below - had been taking 6 DHC per day (I had previously tried to call pt re this (03/07/25)). OPIC also states pt says zopiclone doing nothing - can this be stopped? Only other stand out med that could be reviewed in terms of falls risk would be solifenacin which has an Anti cholinergic burden score of 3 (high), potential to increase falls risk. Could this perhaps be reviewed for effectiveness/need? Labels in venalink should have descriptors for pt to identify what is what? (noted below that these are unidentifiable).

15-July-2025 Dr Federated User Home Visit

Intervention (P3) Care plan reviewed DECaHT entry. Visit to Mr. Beattie today to pick up vena link to have pharmacy remove Furosemide from vena link as per discussion with Dr. N. Perdios yesterday. Attended with student paramedic J. Gilkison-Davies. Stuart answered with call entry on second attempt and buzzed us into the building. Stuart sitting in his livingroom watching TV. His carers have attended this morning but Stuart feeling a little unwell, states he has been sick this morning. Explained reason for visit and happy for me to remove his vena link containing Furosemide. Stuart reports 1 x episode of vomiting this morning, nil since. Has managed to eat his breakfast this morning. Nil specific but just not feeling 100%. E+D, has breakfast and dinner but rarely eats lunch. Denies any urinary symptoms and states bowels moved yesterday with nil concerns. Chest clear with good air entry throughout. Vital signs unremarkable - BP sitting 144/80 standing 98/68, temp 36.4, pulse 76, O2 sats 96%, RR 35 - no respiratory distress and pallor normal. Discussed use of Dihydrocodeine and Stuart states he last had this on Sunday. His understanding was that he was still to be taking 6 a day. Took the last 3 on Sunday. States in pain in lower back, mobilising and standing from chair with no obvious signs of pain. Not giving very descriptive answers with regards to his pain and giving one to two word answers upon questioning. Happy to just be taking 2 at night as prescribed. Discussed sick day rules with regards to vomiting if it were to continue but tablets unidentifiable in vena link. Plan - Vena link taken to Boots Lochee to remove furosemide and they will deliver back to Stuart this afternoon. DECaHT nurses will review postural hypotension on Thursday as planned. Email to Dr. Perdios ? Dihydrocodeine to be added to vena link to avoid taking out with prescription. Also to review diabetic medication as this is a LTC. Awaiting HbA1c results all other bloods acceptable.

14-July-2025 Dr Federated User Home Visit

Diagnosis (P3) Hypotension Referred to DECaHT initially by GP on 07/07/25 for frailty and reduced mobility. Escalated by DECaHT cluster nurse with concerns of symptomatic postural hypotension. PMHx – COPD, Stroke 2001, BCC, Emphysema, Rhabdomyolysis 2025, T2DM and epilepsy. Joint visit with ANP colleague V.Cathcart. On arrival Stuart answered his door buzzer and let us in. Friend Darius and his young son visiting, occasionally visit to help Stuart. Explained reason for visit and gained consent for examination. Stuart has had a number of falls recently at home. Dizzy when standing, denies mechanical falls starts clearly it is due to dizziness. Otherwise reports feeling well. No injuries sustained with falls and reports no seizure activity and no episodes of LOC. Stuart reports his last falls roughly 1 week ago. Stuarts main concerns is his mobility. Eating and drinking well. Denies urinary sx and reports bowels moving as normal, expresses nil concerns. BP sitting 107/77, standing 76/59, 3min standing 105/73. Feeling a little dizzy but standing well not unsteady on feet. Other vital signs unremarkable. BMs today 8.4mmols. Discussion re medication states taking his Zopiclone 3.75mg and does not wake feeling groggy. States taking Dihydrocodiene 4-5 times daily for lower back pain (was previously prescribed this but changed on his last hospital admission), discussed currently prescribed 30mg take 2 at night but no boxes of Dihydrocodiene to check prescription as he states the boxes were thrown out. Neuro - PEARL, no nystagmus, no signs of opioid toxicity. Has previously tried topical pain relief and patches which have not helped. Recent ECG sinus rhythm and no concerns. Recent MMSE 24/30. No cognitive concerns. Impression – taking excess dihydrocodiene (prescription checked with GP) Stop Furosemide. Plan – Stuart to only take dihydrocodiene at night as prescribed. Visit tomorrow to remove Furosemide from vena link. L+S BP and pain to be reviewed on Thursday. Stuart has DECaHT contact number knows to call if any concerns between 9-4pm.

14-July-2025 Dr Nectarios Perdios Surgery consultation

Administration Telephone triage encounter discussed case with zoe (P3) from decaht - postural drops which are quite significant. standout medication that could contribute is furosemide - prescribed for many years without evidence of CCF. stop and observe if BP regulates. Ozempic could be contributory if not eating enough but BMs are 8 when checked. If furosemide yields little result then suggest geris clinic. DHC to be taken as per last hospital discharge

14-July-2025 Mrs Lesley Simpson Administration

Administration Administration Letter - Dundee Law Centre (P3)

10-July-2025 Dr Nectarios Perdios Surgery consultation

Administration Administration Dear Mr Marshall, Thanks for your letter (P3) requesting a medical opinion of Mr Beattie' fitness to attend court proceedings. He has been a registered patient with the surgery since 31 March 1991. He has indeed in recent months had a prolonged admission to Ninewells hospital following mechanical and likely seizure related falls at home. He was first admitted 18th April 2025 and discharged on 21st May 2025. He was treated for both pain and rhabdomyolysis secondary to the time he spent on the ground following his fall. He was then readmitted with a suspected choking episode/seizure on the 24th May 2025 and discharged 10th June 2025. I note there is mention of bilateral ankle fractures in your letter but this is not documented anywhere in the hospital paperwork nor can I see any imaging on his record to support this. During admission he did have leaf spring ankle orthosis fitted due to foot drop that would be contributory to his falls and unsteadiness. I recently consulted with Mr Beattie who reports that he has essentially become housebound due to his poor mobility and increasing frailty. He tells me he made a short trip to a local bank last weekend with the assistance of a friend but fell over in the bank as his legs gave way beneath him. We are investigating and treating him further in the community and have most recently found a significant drop in his blood pressure that we will address in the coming days and weeks. It would most certainly be a concern in a court room setting where I would say there is a risk of further falls and injury until addressed. The stated court date of the 25th July will likely come too soon for Mr Beattie and my opinion is that he would be medically unfit to attend without significant physical assistance to do so. I'd be happy to provide any further information as required Yours Sincerely Dr N Perdios GP Partner Taycourt Surgery

Symptom	Diet - patient initiated Carer sometimes makes meals for Stuart. Eats plenty fruit/veg	
Symptom	Enjoys light exercise Walks to shop every day	
Examination	O/E - pulse rate	86 bpm
Examination	O/E - blood pressure reading	134 / 74 mm Hg
Administration (P3)	Patient encounter admin. data Attended for 6 month diabetic review. Came here rather than CCTS as had questions about checking blood sugars. Had been given another monitor as previous not working and this one not working either. Showed how to use as was trying to collect blood at back of device. More strips requested. Seems to be very anxious and not sure when to check BM. Have explained about hypos previously so went over this again. Advised that he only needs to check BM s if he feels unwell. Does not drive. Told him to pass this info on to his carer.	
Intervention (P3)	Capillary blood sampling Blood sugar checked whilst showing Stuart how to use the monitor = 13.7 mmols/l before lunch	
Examination	Cigarette smoker	10 / / cigarettes / cigars / tobacco units per week
Examination	Teetotaler	114.6 Kg
Examination	O/E - weight	37.4
Examination	Body Mass Index

21-Feb-2024 Dr Miriam Tiong Telephone call to a patient

Administration Telephone encounter rv of DHC and zopiclone. says (P3) needs to take 7.5mg zopiclone as 3.75mg not working. no caffeine/alcohol. cannot sleep at night. says sleeping during the day. i advised zopiclone shouldnt be for long term use. advised to get out during the day, get sunshine to reset sleep wake cycle, not to nap during the day. given some additional top ups he can use short term to help him reset but going forward, to try wean off zopiclone use as able. DHC for chronic back pain. explained again not good for long term use. not taking pcm. add this is in regularly and try to wean down DHC use over time.

21-Feb-2024 Mrs Jane Thomson Clinic

Administration Patient encounter admin. data instruction given on use (P3) of glucometer and blood finger prick today was high discussed with duty doc and is ok for home, i have given information leaflets on diet and diabetes and foot care, i have completed a podiatry referral as he tried to cut his own nails last night and made his toe bleed.

Intervention	Smoking cessation advice	Spoke to Stuart about Pharmacy First Service as he says he would try patches
Symptom	Diet - patient initiated	Often does not eat till tea time. Eats 3 bananas a day
Symptom	Enjoys light exercise	Lives at top of flats so up and down stairs a lot.
Diagnosis (P3)	Lifestyle counselling	Advised to reduce bananas to one per day and to try to increase fruit intake. Also strongly advised to have at least breakfast and tea due to taking diabetic medications at these times
Diagnosis (P3)	Depression screening using questions	During the past month, have you often been bothered by feeling down, depressed, or hopeless? Answer: NO During the past month, have you often been bothered by little interest or pleasure in doing things? Answer: NO
Diagnosis (P3)	Diabetic monitoring	
Diagnosis (P3)	Epilepsy monitoring	
Administration (P3)	Patient encounter admin. data	Attended for annual diabetes and epilepsy reviews. Could not provide urine sample so will bring in next week. Is due to phone Ninewells to arrange epilepsy appointment. Discussed diet and he has lost some weight. Does not eat regular meals so advised to do this due to diabetic medication. Leaflet given and discussed hypos. Feet checked -no sensation in either but pulses ok. Will see nurse next week to be shown how to use glucometer and to be issued with one. Says he has had hypos in the past.
Examination	Cigarette smoker	roll ups 20 / / cigarettes / cigars / tobacco
Examination	Waist circumference	126 cm
Examination	Teetotaller	units per week
Examination	O/E - weight	109.6 Kg
Examination	Body Mass Index	35.7

15-Sept-2022 Diagnosis Type 2 diabetes mellitus
(P1)

21-Sept-2022 Mrs Jane Thomson Clinic

Examination O/E - blood pressure reading although this is slightly 140 / 85 mm Hg
raised his BP in clinic today was normal

21-Sept-2022 Mrs Jane Thomson Clinic

Diagnosis Type 2 diabetes mellitus
(P3)

21-Sept-2022 Mrs Jane Thomson Clinic

Examination Blood sugar result 16.9 mmol/L
Administration Patient encounter admin. data patient has all pulses
(P3) present in both feet, but does not have any sensations
with 10g monofilament in both feet, discussed with
DrSanu and as no symptoms ok to be left for now, patient
has signs up for OVIVA today and awaits his first
telephone appt, FOR repeat HB A1C in 12 weeks has
been commenced on metformin and glicazide and
empagliflozin but has not collected script, will start on friday
23/9 when they are delivered
Examination Waist circumference 136 cm
Diagnosis Type 2 diabetes mellitus
Examination **Blood sugar result:**
Blood sugar result 16.9 mmol/L (No range available)

21-Sept-2022 Mrs Jane Thomson Clinic

Intervention Smoking cessation advice
Intervention Lifestyle counselling discussed diet, smoking and
exercise
Symptom Diet - patient initiated very high carbohydrate diet, and
high fat, no fruit or vegetables. advice given and has
signed up for OVIVA
Symptom Exercise grading no exercise only walks to corner shop
once a day.
Examination O/E - pulse rate 87 bpm
Examination O/E - blood pressure reading 128 / 85 mm Hg
Diagnosis Depression screening using questions During the past
(P3) month, have you often been bothered by feeling down,
depressed, or hopeless? Answer: NO During the past
month, have you often been bothered by little interest or
pleasure in doing things? Answer: NO
Examination Cigarette smoker 15 // cigarettes /
cigars / tobacco
units per week
Examination Drinks rarely
Examination O/E - weight 117.2 Kg
Examination Body Mass Index 37.8
Examination O/E - height 1.75 m

24-Mar-2022 Mrs Clare Dow Surgery consultation

Intervention Diabetic monitoring newly diagnosed

23-Mar-2022 Mrs Clare Dow Surgery consultation**21-Mar-2022 Ms Janice Birse Administration**

25-Feb-2022 Ms Emma Jones Medicine Management

Administration Outpatient clinic letter received Ensemble received from
(P3) NW Nurse led epilepsy clinic - 24/02/2022

Intervention Repeated prescription ensemble started Lacosamide
(P3) titration dose - 50mg in the evening 7/7, then 50mg morning and evening 7/7, 50mg in the morning and 100mg in the evening 7/7 then 100mg morning and evening thereafter. to be reviewed in 4 months. Ensemble states that there's no change sodium valproate or lamotrigine dose.

Administration Telephone encounter Call to Boots Lochee Hub / Donna
(P3) - Patient is due to have new cycle of trays start week beginning 07/03/2021 so lacosamide titration to start then - acute Rx done to full titration dose and added to repeats

22-Feb-2022 Miss Jill Rowan Administration**26-Jan-2022 Ms Janice Birse Administration****10-Jan-2022 Dr Deepa Sanu Surgery consultation**

Administration Telephone encounter discussed medications, tolerating
(P3) fine, he is to come in for bloods in may time, no indication needs these repeated in 2 days time cancelled appointment. he feeling well in himself and tolerating his medications fine and compliant, will increase metformin to 1gm bd with next issue

05-Jan-2022 Miss Jill Rowan Administration**29-Dec-2021 Dr Balakrishnan Pillai Triage**

Administration Telephone triage encounter Pt says the 3.75mg of the
(P3) Zopiclone is not helping him sleep and still waking up 3-4 times during the night...I will increase the dose to 7.5mg and see if that helps....(sdr.bala pillai-locum)

21-Dec-2021 Mr Mark Gourlay Clinic

Examination	Blood glucose result	9.8 mmol/L	
Examination	Blood ketone level	mmol/L	
Administration (P3)	Seen by practice nurse Attended for blood glucose and ketone level check as requested by Dr Sanu. Blood glucose = 9.8 mmol and ketones = low. Discussed this with Dr Sanu as planned - she was happy with this result and I explained that Stuart is looking well. I asked about his medications - he has ran out of Gliclazide and isn't sure about Metformin as he is on a lot of medications, which we agreed with. Dr Sanu advised HbA1c in 3 months time (March) and she will review his medication next month. I advised his Gliclazide should arrive in his next Venalink. He asked to be weighed this morning as well, he says this has gone up since last time.		
Examination	O/E - weight Patient request	111.2 Kg	
Examination	Body Mass Index Patient request	35.8	
Examination	Blood glucose result:		
	Blood glucose result	9.8 mmol/L	(No range available)
Examination	Blood ketone level: Low		
	Blood ketone level	mmol/L	(No range available)

20-Dec-2021 Mr Mark Gourlay Clinic

Administration Telephone encounter Called Stuart following a
(P3) discussion with Dr Sanu regarding his cancelled appointment - this was to have his blood glucose and ketone levels checked, as well as to discuss his medication. I wasn't aware this was what was required. I apologised to Stuart over the phone and have booked him in with myself tomorrow to have these done.

17-Dec-2021 Mr Mark Gourlay Clinic

Administration Telephone encounter Called Stuart regarding his (P3) booked appointment with myself on Monday (20/12/21) - comment box indicated "follow up as requested by Jane". Unable to see anything documented that required a follow up and Nurse Thomson is currently on annual leave. I asked Stuart if he had any knowledge of this appointment and he said this was the first he had heard of it - said the nurse hadn't mentioned anything. I noted a request from Dr Pillai for follow-up bloods in 6/52 from 01/12/21, so I have cancelled Monday's appointment and booked a blood test for this follow up on 12/01/21. I said if anything else is outstanding we can follow this up then.

CHECK FOR HAEMATURIA AND PROTEINURIA	(No range available)

11-Dec-2021 Dr Deepa Sanu Results recording

10-Dec-2021	Examination	Eosinophil count x10 ⁹ /L	0.08 10 ⁹ /L	
10-Dec-2021	Examination	Haemoglobin estimation	142 g/L	
10-Dec-2021	Examination	Mean corpusc. haemoglobin(MCH)	30.3 pg	
10-Dec-2021	Examination	Mean corpusc. Hb. conc. (MCHC)	336 g/L	
10-Dec-2021	Examination	Mean corpuscular volume (MCV) fl	90.1 fL	
10-Dec-2021	Examination	Monocyte count x10 ⁹ /L	0.7 10 ⁹ /L	
10-Dec-2021	Examination	Neutrophil count x10 ⁹ /L	3.5 10 ⁹ /L	
10-Dec-2021	Examination	Platelet count x10 ⁹ /L	230 10 ⁹ /L	
10-Dec-2021	Examination	Red blood cell (RBC) count x10 ¹² /L	4.68 10 ¹² /L	
10-Dec-2021	Examination	Total white cell count x10 ⁹ /L	6.3 10 ⁹ /L	
10-Dec-2021	Examination	Lymphocyte count x10 ⁹ /L	2 10 ⁹ /L	
10-Dec-2021	Examination	Full blood count - FBC <none>		
10-Dec-2021	Examination	Haematocrit	0.422 ratio	
10-Dec-2021	Examination	Basophil count x10 ⁹ /L	0 10 ⁹ /L	
10-Dec-2021	Examination	Eosinophil count x10 ⁹ /L:		
		Eosinophil count x10 ⁹ /L	0.08 10 ⁹ /L	(No range available)
10-Dec-2021	Examination	Haemoglobin estimation:		
		Haemoglobin estimation	142 g/L	(Range: 130 - 180)
10-Dec-2021	Examination	Mean corpusc. haemoglobin(MCH):		
		Mean corpusc. haemoglobin(MCH)	30.3 pg	(Range: 27 - 32)
10-Dec-2021	Examination	Mean corpusc. Hb. conc. (MCHC):		
		Mean corpusc. Hb. conc. (MCHC)	336 g/L	(Range: 320 - 360)
10-Dec-2021	Examination	Mean corpuscular volume (MCV)fl:		
		Mean corpuscular volume (MCV) fl	90.1 fL	(Range: 85 - 105)
10-Dec-2021	Examination	Monocyte count x10 ⁹ /L:		
		Monocyte count x10 ⁹ /L	0.7 10 ⁹ /L	(Range: 0.2 - 0.8)
10-Dec-2021	Examination	Neutrophil count x10 ⁹ /L:		
		Neutrophil count x10 ⁹ /L	3.5 10 ⁹ /L	(Range: 2 - 7.5)
10-Dec-2021	Examination	Platelet count x10 ⁹ /L:		
		Platelet count x10 ⁹ /L	230 10 ⁹ /L	(Range: 150 - 400)
10-Dec-2021	Examination	Red blood cell (RBC) count x10 ¹² /L:		
		Red blood cell (RBC) count x10 ¹² /L	4.68 10 ¹² /L	(Range: 4.5 - 6)
10-Dec-2021	Examination	Total white cell count x10 ⁹ /L:		
		Total white cell count x10 ⁹ /L	6.3 10 ⁹ /L	(Range: 4 - 11)
10-Dec-2021	Examination	Lymphocyte count x10 ⁹ /L:		
		Lymphocyte count x10 ⁹ /L	2 10 ⁹ /L	(Range: 1.5 - 4)
10-Dec-2021	Examination	Full blood count - FBC <none>:		
		Full blood count - FBC <none>		(No range available)
10-Dec-2021	Examination	Haematocrit:		
		Haematocrit	0.422 ratio	(Range: 0.4 - 0.52)
10-Dec-2021	Examination	Basophil count x10 ⁹ /L:		
		Basophil count x10 ⁹ /L	0 10 ⁹ /L	(No range available)

11-Dec-2021 Dr Deepa Sanu Results recording

10-Dec-2021	Examination	Urine microalbumin	14 mg/L	
10-Dec-2021	Examination	Urine albumin:creatinine ratio <none>	g/mol	
10-Dec-2021	Examination	Urine albumin:creatinine ratio mg/mmol Creat	2.8 mg/mmol(creat)	
10-Dec-2021	Examination	Urine microalbumin:		
		Urine microalbumin	14 mg/L	(No range available)
10-Dec-2021	Examination	Urine albumin:creatinine ratio <none>:		
		Urine albumin:creatinine ratio <none>	g/mol	(No range available)
10-Dec-2021	Examination	Urine albumin:creatinine ratio mg/mmol Creat:		
		Urine albumin:creatinine ratio mg/mmol Creat	2.8 mg/mmol(creat)	(No range available)

10-Dec-2021 Mrs Clare Dow Surgery consultation

10-Dec-2021 Mrs Olive Neave Surgery consultation

10-Dec-2021 Mrs Patricia Buckingham Other

08-Dec-2021 Dr Deepa Sanu Surgery consultation

Administration Consultation seen with Jane, he seems to be confused (P3) about his medications, however appears has started taking gliclazide and bloods are a reflection of this, will now increase the dose of his medications and add metformin. CNS examination, power reduced right UL AND LL, reflexes dulled as well. ?/ has had a vascular event, will organise for urgent CT brain. will need referred to the foot clinic BS This morning 18 after bfast and ketones 0.4.

08-Dec-2021 Mrs Jane Thomson Clinic

Examination Blood sugar result has had weetabix with 2 sugars this 18.6 mmol/L am for breakfast

Examination ECG

Intervention Smoking cessation advice

Symptom Diet - patient initiated regular meals does not enjoy fruit and veg breakfast weetabix with sugar lunch sandwich and coffee with sugar tea time a ready meal and coffee with sugar also eats about 2 packs of crisps per day

Examination O/E - vibration sense normal patient has had referral form completed and sent to foot care diabetics at Ninewells by instruction of Dawn Trevis podiatrist at strathmore today

Examination Urine test for glucose

Examination Urine protein test

Examination O/E - R.-leg pulses all present

Examination O/E - L.-leg pulses all present

Examination O/E - pulse rate 82 bpm

Examination O/E - blood pressure reading 129 / 83 mm Hg

Examination Urine dipstick for blood

Diagnosis (P3) Depression screening using questions During the past month, have you often been bothered by feeling down, depressed, or hopeless? Answer: NO During the past month, have you often been bothered by little interest or pleasure in doing things? Answer: NO

Diagnosis (P3) Lifestyle counselling advice given regarding diet and smoking

Administration (P3) Patient encounter admin. data Ketone measurement blood today 0.4 ALSO NO FEELING IN FEET TODAY, FOR REFERRAL TO DIABETIC FOOT CLINIC

Diagnosis (P3) Bowel cancer screening programme

Administration (P3) Patient encounter admin. data Referral to be made to diabetic podiatry as no sensations or pulses in both feet today. says they have been feeling a bit numb for about 4-5 months now

Administration (P3) Patient encounter admin. data can we repeat the bloods from yesterday as on ICE for yesterday and resend urine

Intervention (P3) Referral for further care referral sent to tayside podiatry dept as sensations and pulses absent

Examination Cigarette smoker 10 / cigarettes / cigars / tobacco

Examination O/E - tactile sensation normal Absent

Examination Waist circumference 121 cm

Examination O/E - weight 114 Kg

Examination Body Mass Index 36.3

Examination O/E - height 1.76 m

Examination **Blood sugar result** has had weetabix with 2 sugars this am for breakfast: Blood sugar result has had weetabix with 2 sugars this 18.6 mmol/L (No range available) am for breakfast

Examination **ECG:** (No range available)

Examination **ECG** (No range available)

Examination **Urine test for glucose: ++**

Urine test for glucose (No range available)

Examination **Urine protein test: Nil**

Urine protein test (No range available)

Examination **Urine dipstick for blood: Nil**

Urine dipstick for blood (No range available)

02-Dec-2021 Mrs Ann Murray Administration

01-Dec-2021 Intervention Referral for further care . Recipient: Ninewells department of Neurology; Referral Type: Out Patient; Sender: Dr Deepa Sanu; Reason: Referral for further care; Referral Status: Referred

02-Dec-2021 Mrs Ann Murray Administration

Intervention Referral for further care . Recipient: Wedderburn House department of CMHT West; Referral Type: Out Patient; Sender: Dr Balakrishnan Pillai; Reason: Referral for further care; Referral Status: Referred

29-Nov-2021 Dr Calum Paton Surgery consultation

Administration Administration NOS lab contacted - blood gluc 31.8 - ? is this cause for tingling - for f2f appt with dr Pillai tomorrow to assess at 1530

29-Nov-2021 Miss Jill Rowan Administration**29-Nov-2021 Mr Mark Gourlay Clinic**

25-Nov-2021 Dr Balakrishnan Pillai Surgery consultation

Diagnosis Hand pain
(P3)
Administration Consultation HJx as per the triage notes below-Checked
(P3) Rt hand now and Numbness felt on the tip of all the fingers and also tender when he flexed the wrist and also Tinel's sign was positive...He says this has been going on for 3 months now and fingers all feel stiff and sore in the morning...Good radial pulse felt...My gut feeling is that if this either could be ?OA on the wrist or ?CTS....I will get the ball rolling and start with blood tests and will also organise a Xray on thw wrist and review him back with the results...With the tingling getting worse at night,I have put him a low dose Amitriptyline though have told him that with him having the Zopiclone will make him more drowsy than normal but he says the sleeping tabs have never helped him sleep properly...Worsening advise given...(dr.bala pillai-locum)

Administration Consultation Pt says he has spoken to Neurology and
(P3) CMHT and they have askwed us to send in new referrals for both these depts to put him on the waiting list to be seen (Seen notes below from Dr Tiong about this)...I will get the ball rolling and will send in rboth the referrals... (dr.bala pillai-locum)

24-Nov-2021 Dr Miriam Tiong Telephone call to a patient

Administration Telephone encounter couple months wakening up 3
(P3) times a night. on nitrazepam for a long time. feels its not working, and i agree, explain it loses effectiveness after a while and this applies to all sleeping meds. says no major causes for sleeplessness and **no change to mental health. no alcohol/rec drug.** not had **psych** rv for a long time. neither has he had neuro rv and says had a couple blackouts few months back and ended up in hospital but no letters for this. advised to get in touch w **psych** and neuro for rv. agree to switch nitrazepam to zopiclone but gradually wean nitrazepam down to avoid withdrawal. not to drink coffee after 12pm.2.at the end of consult says all 5 finger tips R hand has been numb for months. no pain/colour change. unable to come in today for examination. booked in for f2f tmrw to assess hand. ? carpal tunnel ?need screen for diabetes and haematinics ?raynauds

12-Nov-2021 Data Transferred from other system

Intervention Administration of first inactivated seasonal influenza vacc *FLU - Flucelvax Tetra (QIVc) (Dundee Central Mass Vax Clinic)*

Intervention (P3)	Referral to pharmacist From Boots Lochee RE: Epilim chrono MCS. Can change to Epilim G/R?
Management (P3)	Telephone encounter Spoke to MC RE: Epilim query below. He suggested contacting the pt's Epilepsy specialist nurse, Pauline Smith.
Intervention (P3)	Telephone encounter Contacted Neurology outpatients at PRI. Spoke to Nicola. HCA. Left message for Pauline Smith. Awaiting c/b.
Management (P3)	Follow-up consultation Emailed PSU Techs RE: Epilim Chrono MCS?Reply below:Sanofi valproate out of stock statement - February 2019Sanofi can confirm that supply of valproate (Epilim and Depakote) is available in the UK. Any patients who have concerns should contact their pharmacist who can contact the Sanofi customer service team so that we can assist and help resolve the issue.Due to temporary disruption in the production of valproate at a Sanofi manufacturing site outside of the UK, stock levels for some treatments of valproate may be lower than usual. Sanofi is managing the situation carefully and working to ensure continued supply of valproate across all markets, including the UK. There are 17 different valproate-based treatments, ranging from tablets of different strengths and coatings through to granules and liquid preparations. We have notified the Department of Health & Social Care about the disruption of supply of valproate.This temporary disruption in supply of some valproate-based treatments is not related to Brexit.Change from 100 tablet packs to 30 tablet packs: At the request of the Medicines and Healthcare products Regulatory Agency (MHRA) pack sizes of valproate have been changed from 100 to 30 tablets. Pharmacies may therefore see that the 100 tablet packs are "unavailable" and assume that valproate is out of stock. The codes for 30 tablet packs should be used. The Customer Services line is available for pharmacists to check on stock levels and ordering codes.
Management (P3)	Telephone encounter Spoke to MC. He has contacted Sanofi med info RE: Epilim Pharmacokinetics.Epilim Chrono time to peak plasma conc = 4-10hrsEpilim E/C time to peak plasma conc = 3-8hrsSanofi Med info
Intervention (P3)	Telephone encounter C/B from Pauline Smith. Specialist Epilepsy Nurse RE: Epilim query as below. Recommended, in the short term, changing pt to Epilim E/C brand at the same daily dose.
Intervention (P3)	Telephone encounter Contacted Boots Hub Lochee RE: Epilim as below. Advised of Specialist Epilepsy Nurses advice - change formulation to Epilim G/R at same dose.Also passed on supply advice from PSU Techs, as below, RE: obtaining Epilim Chrono for future supplies to pt.They have requested a new Rx to cover supply, as pt needing Venalink today.
Administration (P3)	Follow-up consultation Rx signed & faxed to Boots Hub Lochee.

24-Sept-2014 Miss Jill Rowan Administration

08-Sept-2014 Dr Stephen Pegg Surgery consultation

Symptom (P3) Back pain without radiation NOS Came in for another
line. Has 27 reasons why he cannot work - back pain /
headaches / diarrhoea / epilepsy and the list goes on.
Has not worked for 20 years he tells me. Does not to me
seem to have any intention of returning to work and
almost seemed 'put out' to be asked about working. I note
that all of his recent lx are normal. Discussed - I have
given him more of the meds he needs today and another
line for 4 weeks but would ask does he need to continually
signed off work?
Administration eMED3 (2010) new statement issued, not fit for work Fit
Note (Diagnosis: Backache; Duration 08-Sept-2014 - 06-Oct-2014)

FOR SOCIAL SECURITY AND STATUTORY SICK PAY PURPOSES ONLY

NOTES TO PATIENT ABOUT USING THIS FORM

You can use this form either:

1. For Statutory Sick Pay (SSP) purposes - fill in Part A overleaf. Also fill in Part B if the doctor has given you a date to resume work. Give or send the completed form to your employer.
2. For Social Security purposes - To continue a claim for state benefit fill in parts A and C of the form overleaf. Also fill in Part B if the doctor has given you a date to resume work. Sign and date the form and give or send it to your Local Social Security Office QUICKLY to avoid losing benefit.

NOTE: To start your claim for State benefit you must use form SC1 if you are self-employed, unemployed or non-employed OR form SSP1 if you are an employee. For further details get leaflet IB202 (from Social Security Local Offices).

Date 11 October 2000

Dear Dr Montgomery

STUART BEATTIE, 36 WHITFIELD AVENUE, DUNDEE, DD4 0BD
DOB: 14.11.60

The above named person (currently on Probation to me) submitted a medical line to this office today. However I am unsure from the line the date of commencement of the medical line and what in fact his illness is. I would be grateful if you could please supply me with this information in writing. Could you also let me know if the nature of his illness would stop him attending Probation sessions.

Mr Beattie was made the subject of a one year Probation Order on 6 June 2000 and to date has supplied three medical lines – each for a 28 day period. Given that he is one quarter of the way into his Order and he has not yet done any work, I am beginning to gain the impression that the Order is unworkable and intend returning it to Court.

I would be grateful if you could return the information in writing to me as soon as possible.

Thank you.

Yours sincerely

DD1 9SY

16th December, 1981

Dr W Gardiner,
1 South Tay Street,
DUNDEE.

Dear Dr Gardiner,

Stuart Beattie, 103 Finella Terrace, Dundee.

This young man was admitted to Ward 15 in the small hours of the morning of the 12th of December under the care of Dr Semple. He had admitted to taking up to 30 tablets of Paracetamol, but apart from that communicated nothing. He was very withdrawn and sullen. He said he was depressed and wished to take his own life. He was not co-operative in taking a full history.

On examination his general condition was good. He smelt strongly of alcohol, there was a small graze over his sternum. Vital recordings were normal, chest and heart sounds were normal. Abdominal examination was normal. He submitted to gastric lavage and paracetamol level checked at 4 hours was well within safety limits and his urine and electrolytes were normal.

He was seen the following morning by Dr Semple, who noted his withdrawn behaviour. At Dr Semple's request, Dr Reid, Consultant Psychiatrist, interviewed this young man at mid-day. It transpired that this gentleman's father had died of a malignancy, possibly malignant melanoma, a fortnight before. He had also been unemployed for two years and his current girlfriend told him that she was leaving him as she had a job in another city. Being depressed and upset he had taken the overdose. Dr Reid also found him uncommunicative but thought he was fit to go home from a psychiatric point of view.

He was allowed home later that day when he was thought to be medically fit. No medical follow-up has been arranged. I gather that Dr Reid has not not arranged any psychiatric follow-up.

c.c. Dr. R. Semple, Consultant Physician,
Ward 15, Ninewells Hospital, Dundee.

Dear Dr. Gardiner,

Re: Stuart Beattie, d.o.b. 14.11.60
103 Finella Terrace, Dundee.

I saw this young man in Ward 15, Ninewells Hospital on the 12th December, 1981 at Dr. R. Semple's request following an overdose of Paracetamol taken along with large quantities of alcohol. Mr. Beattie told me he had been depressed and unhappy following his father's death from malignant disease some two weeks previously and on the evening of the episode of self poisoning his girlfriend had told him that she was off to Germany where she had obtained work as a Hairdresser. He said he now regretted the overdose and did not think it likely that he would repeat this behaviour. I thought he was fit to be discharged home from a psychiatric point of view and I have not arranged any follow-up.

C.F.	☐

Dear Dr. Montgomery,

STUART BEATTIE, 103 FINELLA TERRACE, DUNDEE

This patient attended the Accident and Emergency Department of Dundee Royal Infirmary on 4th April, 1993 following an alleged assault. Records would indicate that on his way out from a Night Club in Dundee he was hit on his right shoulder with a baseball bat. In the Accident and Emergency Department he was severely agitated and required to be sedated. He was observed in the Trauma Ward overnight and by the following morning apart from some discomfort around the right shoulder, his condition was satisfactorily.

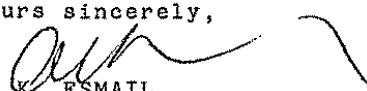

Today he informs me of pain in the anterior aspect of the right rib cage particularly on coughing and on deep inspiration. The right shoulder discomfort is improving. He remains well, otherwise.

On examination despite his history of chest pain, the chest is noted to be clear. I have explained to Mr. Beattie that this is consistent with an intercostal sprain.

His shoulder movements have improved but there is still a lag of 30% in all movements. The prominence at the joint is consistent with dislocation of the acromio-clavicular joint. I have advised Mr. Beattie regarding this and symptomatic treatment. He is to gradually mobilise his shoulders as symptoms permit.

I do not anticipate any problems here and have discharged him from our care.

Yours sincerely,

A. K. ESMAIL

SPECIALTY: Trauma and Orthopaedic Surgery CLINICIAN: ANY CONSULTANT SOURCE: ALISTAIR MONTGOMERY

CLINICAL INFORMATION**Reason for Referral** (including expectation of referral outcome)

Recurrent nail growth on partially amputated big toe

History of presenting complaint/examination findings/Investigation results

This gentleman had a traumatic amputation of the tip of his left big toe some time ago. He then had complications with remnants of toenail growing out of his stump, causing a lot of pressure problems. He was in last year having this tidied up, but unfortunately there is new nail growth on both lateral margins of his big toe, which are causing pain, tenderness and discomfort. I would therefore be grateful if he could be seen again to have this definitively dealt with. I have explained to the patient that it can be quite difficult especially in the aftermath of a traumatic amputation.

Dear Dr Montgomery,

Stuart Beattie, 36 Whitfield Avenue, Dundee, DD4 0BD

Diagnosis: Probable generalised tonic clonic seizures *Spice done*
Previous head injury
Global right upper limb weakness of uncertain aetiology
Right acromio-clavicular joint dislocation 1994
Traumatic amputation distal phalanx left great toe May 2001

Medications: Valproate Chrono 300 mg bd
Diazepam 2 mg tds (reducing)

Many thanks for referring once more Mr Beattie who gives a history suggestive of frequent generalised tonic clonic seizures over a period of at least 14 years. Mr Beattie is a 43 year old right handed gentleman who has previously worked as a labourer but has been unemployed for the past 18 years.

To his knowledge gestation and delivery were uncomplicated and there is no history of CNS infection or febrile convulsions. He attained motor and language milestone appropriately and attended mainstream schooling to the age of 15.

At the age of 18 he was assaulted with a pick shaft and lost consciousness for an unknown period of time. He was taken to accident and emergency at DRI but self discharged before a skull x-ray was taken. He re-attended on the following day for suturing of the scalp wound. There is no history of traumatic amnesia.

Later in the same year he began to suffer attacks which he terms "blackouts". These episodes were preceded by very presyncopal sounding symptoms, but he is adamant that they were not associated with postural change and could occur whether sitting, lying or standing. A number of these attacks were associated with micturition. He would experience light headedness with concentric diminution of visual fields before collapsing. Unconsciousness would last only a few seconds and he would recover with no post ictal symptoms.

At some point in the late 80's or early 90's he developed distinct attacks with features suggestive of generalised tonic clonic epileptic seizures. He was treated with Carbamazepine in the community, achieving limited seizure control. He was not referred to Neurology until 1999 and at this time failed to attend four consecutive appointments. He was re referred and assessed by Dr Davidson in April 2001 who felt that the history was compatible with generalised epileptic seizures. Outpatient investigations were arranged but Mr Beattie did not attend these and subsequently defaulted from a further four appointments before being lost to follow up.

Headquarters
King's Cross, Clepington Road, Dundee DD3 8EA

Chairperson, Mr Peter Bates
Chief Executive, Professor Tony Wells

Since this time he has continued on Carbamazepine with ongoing attacks with a frequency of up to 8 per month. I note that you changed his anti convulsant to Valproate in January 2004, and control appears to have improved since this time. Mr Beattie tells me that he has had no seizures over the past two and a half months, having had a total of 8 attacks this year.

Mr Beattie was able to give a relatively lucid account of his typical attacks as described by his current partner. Attacks are all preceded by an ill defined sense of unease associated with profuse sweating and pale colour change. This is followed by abrupt and complete loss of consciousness. His partner describes tonic stiffening with extension of all four limbs and trunk accompanied by trismus. Eyes remain open and are "rolled back". They are followed by low amplitude symmetrical clonic movements lasting only a few seconds. Mr Beattie has never been incontinent of urine or sustained tongue or buccal injuries. He does, however, describe generalised myalgia, feels fatigued and may have a headache. Curiously he describes being completely unaware of the passage of some convulsive attacks. He does not need to sleep afterwards and will usually sit still until he "recovers". He is unable to identify any trigger factors or precipitants. There is no clustering of attacks. He has never suffered any significant injuries in the context of an attack.

Past medical history is as detailed above. He smokes 10 cigarettes per day and takes no alcohol. He is the youngest of 6 male siblings. The second, third and fourth brothers have all suffered epileptic seizures in the past. In one case this is related to a previous severe head injury and in the other two brothers, alcohol appears to be a causative factor. There is no other history of epilepsy in the family. Mr Beattie himself has 2 children, a son aged 14 and a daughter aged 6 with whom he has no contact.

On examination today Mr Beattie was alert, orientated and well presented. Cranial nerve examination including fundoscopy was entirely unremarkable. In the upper limbs tone was normal and symmetrical. There was no pyramidal drift but on testing there was a grade 4/5 weakness globally in the right arm. There is no reflex asymmetry. In the lower limbs tone, power and reflexes were normal and symmetrical with flexor plantar responses bilaterally. Upper and lower limb co-ordination was normal and there was no somato sensory deficit.

Mr Beattie offers a remarkably detailed and accurate description of generalised tonic clonic seizures as described by his partner. It is surprising that he has suffered such attacks on a weekly basis for a period of 14 years, yet has only managed to attend the Neurology clinic on 2 occasions. There are also some rather unusual features to the post ictal period. He does, however, appear to have derived significant improvement in seizure control following the change to Valproate and this would appear to support an organic diagnosis. He clearly warrants further investigation and I have arranged for outpatient EEG and MRI. A 12 lead ECG taken today shows sinus rhythm with a rate of 70 bpm normal axis and no changes. PR and QT intervals are normal. Routine bloods show a normal, U&E, LFT, calcium, glucose, magnesium, thyroid function and full blood count. Valproate is predictably low at 65.

Results of Mr Beattie's further investigations will follow when available. In the meantime it would be reasonable to increase his Valproate to a normal maintenance dose. This can be done in steps of 200 mg at weekly intervals to 500 mg bd initially. Mr Beattie has a return appointment for 6 months time.

Yours sincerely,

Dr D Simpson

Dear Dr Montgomery

Stuart Beattie, 36 Whitfield Avenue, Dundee

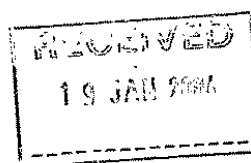

Procedure: Removal of 2 Nails Isles left great toe amputation stump.

Date of surgery: 09 12 03

Reviewed today in the clinic about 4 weeks down the line from this surgery, he tells me that the wound site had burst out once, about 4 days ago, but by now it is entirely dry with no sign of infection or inflammation. I am discharging Mr Beattie from our care with the understanding that he can be referred back should any problem arise.

Yours sincerely

Mr M Nassif
 Consultant Orthopaedic Surgeon

CLINICAL INFORMATION					
Reason for Referral (including expectation of referral outcome)					
Epilepsy - lost to follow up					
History of presenting complaint/examination findings/Investigation results					
This gentleman was seen once in the epileptic clinic back in 2001. It was arranged for him to have a CT scan and EEG and diagnosis of generalised, chronic epilepsy was made. Unfortunately due to a change of address he missed his appointments and never went for investigations and then he was admitted to orthopaedics and things got lost. He himself never raised the subject again. He has been on Carbamazepine all these years and is still having up to three seizures a week. During this time, he had an accident with a Flymo and had to have a traumatic amputation of his big toe. As he seems to be inadequately controlled, I have changed him to Epilim Chrono 300mg bd and plan to review him with a view to increasing his medication according to response. I wonder if he could be seen again and possibly his investigations re-instituted. I note that he has a brother who has epilepsy and another brother has also been referred with ?epilepsy to the clinic.					
Past medical History					
Shoulder dislocations and joint reconstruction, traumatic amputation of his big toe.					
Current and recent medication					
Epilim Chrono, reducing Diazepam, Trimovate cream, Dihydrocodeine tablets 60mg qds

Dear Dr Montgomery

RE: Stuart Beattie, 36 Whittfield Avenue, Dundee

I think you have spotted the diagnosis exactly. Unfortunately some nail bed was left behind after the amputation of the tip of the left big toe, and this took a very long time to show. Currently he has 2 isles of nails to the 2 corners of the wound causing him severe localised pain.

I am booking him as a Day Case to my list in Stracathro Hospital for nail and nail bed excision.

Yours sincerely

Dear Stuart

Our practice is reviewing all patients receiving temazepam with the view to stopping prescribing this medication. You have been receiving prescriptions for temazepam 60mg for some time now. You would probably like to ask the following question:

Why should I come off temazepam?

Studies have shown that after a few weeks of taking temazepam it loses effectiveness, the body gets used to these tablets so that they no longer work properly. Some people try to make the drug more effective again by increasing the dose they take. This doesn't work for long and can increase the problems of side effects.

Sometimes, people take temazepam because it helps them feel better when they have lots of worries in their lives. Unfortunately temazepam doesn't solve these worries and because it affects the memory and ability to make judgements it can actually make it harder to deal with these problems.

We would like to help you to reduce your temazepam and perhaps stopping them at a future date. We do not want you to stop taking them suddenly as this could cause unpleasant effects. Therefore, you will first be changed to an equivalent dose of a similar medicine called diazepam. Our aim is to make you less dependent on the tablets.

What will happen next?

Your next repeat prescription will be for an equivalent dose of diazepam, therefore your next prescription will be for: Diazepam 5mg x 168 up to 6 tabs daily

If you are unhappy with this please make an appointment to see Dr before your prescription is due.

Yours sincerely

Dr Flavahan, Dr Montgomery, Dr Gardiner, Dr Hollins, Dr Badenhorst

Dundee

Dear Mr Nassif

Stuart Beattie – 36 Whitfield Ave, Dundee
DOB: 14.11.60

Thank you for your letter of the 11th April on this gentleman.

He asked me today if I had heard when his appointment was going to be and he complained that one month ago he had pulled a small fragment of bone out of the corner of his wound on top of his toe and there is still a slight hole of sinus there today. When I asked him about his missed appointment in both April and in May, he looked absolutely blank at me and said "that he had never had an appointment or received one". I asked if he had been having trouble with his postman and he said "that he had had a lot of temporary people recently". I suggested that he made a complaint to the Post Office. It may be worthwhile sending him a duplicate appointment to 103 Finella Terrace, where his mother lives, as well as to his home at 36 Whitfield Avenue.

He still has a lot of tenderness around his toe and is finding it very, very sore. I would be grateful if he could be seen again. Sorry to trouble you in this matter. He continues on DHC, Temazepam etc.

Yours sincerely

Dear Dr Montgomery

Stuart Battie, 30 Whitfield Avenue, Dundee

Your patient attended Ophthalmology OPD on 09/05/02.
 Our findings were as follows:

Consultant: Dr C J MacEwen

Visual acuity:
 6/5 right eye, 6/9 left eye unaided

Diagnosis:
 Metallic foreign body and rust ring, left cornea.

Management Plan;
 Removed with a green needle today. Chloramphenicol ointment qds left eye for 1 week and then discontinue. Discharge from routine eye Clinic review but I would be happy to see him again should there be any problems in the future.

Yours sincerely

G Cormack

Dear Dr Montgomery.

Re: Stuart Beattie, 36 Whitfield Avenue, Dundee

Diagnosis: Open fracture amputation tip distal phalanx right big toe - 25/05/01.

The last time I saw Mr Beattie in my Clinic was on 5th November 2001 when I found that he has developed an element of hyper-sensitivity to the stump of his right big toe which is a well known complication in digital stumps after amputation and this complication is quite difficult to address.

However, I gave him an appointment to my Fracture Clinic on 11th February 2002 for follow up but he failed to attend this clinic and there was no note to me to say that he phoned and cancelled.

However, I will give him the benefit of the doubt and I will send him an appointment to attend my Clinic in four weeks and I will keep you informed regarding his follow up should he attend.

Yours sincerely

M Nassif
 Consultant Orthopaedic Surgeon

Dear Mr Nassif

Stuart Beattie, 36 Whitfield Avenue, Dundee
DOB: 14.11.60 0134

This gentleman failed to attend your clinic on 15th February. When I challenged him about this, he told me that he had the flu on that day and he rang up the appointments office and cancelled his appointment and was told they would send him another one. I would be most grateful if you could try and confirm this. We are in fact trying to tighten up on the prescribing on Dihydrocodeine in our practice and Stuart does receive a regular prescription for eight a day. If his story that he rang up and cancelled and another appointment was being sent out cannot be substantiated, we would have to view this very seriously in the light of his previous history of DNAs at the hospital and to whether he really justifies having repeat prescriptions of Dihydrocodeine. I would therefore be grateful for your help.

Yours sincerely

Dear Dr Montgomery

Stuart Beattie, 36 Whitfield Avenue, Dundee

Diagnosis: Open fracture amputation tip of distal phalanx right bit toe
- 25 05 01

I reviewed Mr Beattie today in the clinic. He has been having hypersensitive stump of the left big toe over the last four weeks. On clinical examination the stump is very healthy, healed fully without any sign of complication. There is an element of hypersensitivity and sharp pain but difficult to locate. I have a feeling that it is more to do with hypersensitivity rather than a local neuroma. No doubt it is a very difficult problem to address, local massaging may subjectively benefit him however I am seeing him back in this clinic in three months for follow up.

Yours sincerely

Dear Dr Montgomery

Stuart Beattie, (14.11.60), 36 Whitfield Avenue, Dundee

Diagnosis: Open fracture left great toe distal phalanx with partial amputation

Treatment: Wound excision and debridement with delayed closure

I saw this gentleman in clinic today. His wound appearance of his great toe is very satisfactory. He has got one area, which has hyperaesthesia, and sensitive area. He complains of shooting pains across his great toe. All the pains he describes sounds more like a neuro type of pain, possibly related to the cut ends of his digital nerves, rather than an infective sign. X-rays done freshly today do not show any evidence of peri-osteal reaction or ongoing osteomyelitis.

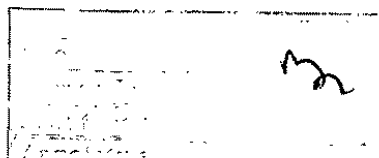

Under the circumstances, I don't think we can take further his alteration of his analgesic medication. Sometimes in this neuro type of pain, a very low dose Amitriptyline at bedtime, or occasional Carbamazepime might also help. We will review him in a couple of months' time. I would be grateful if you could prescribe appropriate analgesia, and take it from there.

Yours sincerely

Dear Dr Montgomery

Stuart Beattie, 36 Whitfield Avenue, Dundee

Diagnosis: Open fracture, amputation tip of distal phalanx left big toe

Time elapsed: 15 days

Mechanism of injury: Left big toe cut with lawn mower

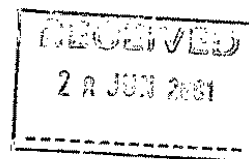

Treatment: Wound excision and debridement and delayed closure

Stuart was reviewed today in the clinic. His toe is healing very well and showing no sign of infection. There is a bit of hypersensitivity to the toe. The big toe has been re-dressed mainly for protection and we will review Stuart back in four weeks hopefully for a final check.

Yours sincerely

Dear Dr Montgomery

Re: Stuart Beattie, 36 Whitfield Avenue, Dundee

Date of Admission: 25/05/01.

Date of Discharge:

Diagnosis: Open fracture distal phalanx left big toe with partial
amputation of the tip of the distal phalanx.

Mechanism: Lawnmower.

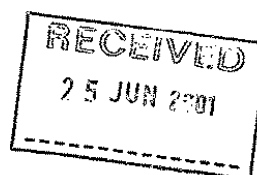

Operation: Wound excision and debridement with delayed
closure.

This gentleman was admitted as an emergency on 25th May 2001 with the
above injury having run over his left big toe with the lawnmower. He was
taken to Theatre and the wound was excised and he was started on oral
Flucloxacillin and Metronidazole and he then underwent delayed primary
closure on 27th May 2001 with some more debridement being necessary at
that time. He was discharged home on 27th May 2001, weight bearing on the
heel and he will be seen in Mr Nassif's Fracture Clinic on 4th June 2001.

Yours sincerely

RECEIVED

28 APR 2001

Dear Dr Montgomery

Stuart Beattie, 36 Whitfield Avenue, Dundee

Thank you for your letter about Mr Beattie who was first referred to the clinic in June 1999 but did not attend and finally, after re-referral, attended on 17.4.01. He is a labourer who has not worked for about 15 years for reasons that were not entirely clear to me.

He has a history of possible seizures for about 12 years. He was told that there are episodes in which he suddenly blacks out, is staring, shaking, sweating profusely, and then he recovers through a phase in which he is dazed. He did not attend with a witness, but I will try to obtain a better history from his girlfriend. These have continued over the years and he has had 5 or 6 in the last four months. His treatment is Tegretol Retard 200mg t.i.d.

There is a history of being hit on the head with a pick axe shaft in about 1978. He was taken to DRI, walked out and the next morning when he found that there was blood on his pillow returned to DRI for suturing. He has had surgery to remove the distal 3rd of his right clavicle, and says that his right arm feels cold at times, and has been weak.

Two brothers have epilepsy, one of whom has alcoholism and the other had a severe injury after an assault.

On examination he was not a lucid historian. The only neurological abnormality was global weakness in the right arm of somewhat variable type without associated wasting. The tendon reflexes were symmetrical, tone normal and plantar responses flexor.

OPINION

The history suggests generalised tonic clonic seizures, but is more likely to be secondary generalised than a generalised epilepsy syndrome. I will try to telephone Pauline Douglas.

Blood has been taken to check the Carbamazepine levels and I will write when the result is available about revision of his dosage, for he still has occasional seizures.

Contd/.

-2-

He drives and I have explained to him that the law states that he should not drive until he has been seizure free for a year.

As he has not been previously investigated I will arrange a CT brain scan.

I was not impressed by the pattern of weakness in the right arm and will not look specifically into that.

Yours sincerely

D.L.W. DAVIDSON
Consultant Neurologist

Dear Dr Montgomery

Stuart Beattie, (14.11.60), 36 Whitfield Avenue, Dundee

Thank you for your referral letter dated 15.03.2000 and 18.01.2001. The above named patient was appointed to the combined orthopaedic/physiotherapy spinal clinic on 19.04.01. Unfortunately, Mr Beattie failed to attend this appointment. He has now been given three appointment dates, ie 24.08.2000, 08.03.2001 and 19.04.01, and has failed to attend all of these appointments. We do not routinely re-appoint these patients, and Mr Beattie will not be offered any further appointments, unless you write to request this.

Many thanks for your referral.

Yours sincerely

Factual Report for ☒ Disability Living Allowance

☐ Attendance Allowance

Dear Doctor

This allowance is a benefit for severely disabled people who satisfy certain disability conditions. We are considering an award for the disabled person named on page 3 of this form who, we understand, is a patient of yours. We need more information before we can make a decision about the claim.

The claim has been made by one of these people:

- the patient named on page 3
- a parent or guardian of the patient who is under 16. The law about social security requires the claim to be made by a parent or guardian when a person is under 16
- a person empowered by a court to handle the affairs of the patient who is incapable of looking after their own affairs
- a person acting under a power of attorney for the patient
- a person appointed by the Secretary of State to manage the social security affairs of the patient who is unable to act for themselves. To protect their interests these appointments are only made after an interview with them. Medical evidence is sought in cases of doubt. The person appointed has also been interviewed by the Department of Social Security and is considered to be suitable to act as an appointee
- a person acting on behalf of the patient who has not been told they are terminally ill. In these circumstances no consent has been given by the person who is terminally ill, but we trust that you will feel it in your patients best interests to give us details of their condition.

Except in the cases when a person has not been told they are terminally ill, the person making the claim has given consent, on behalf of your patient, for you to disclose their medical records to the Department of Social Security for the purpose of the claim.

10/99

Please turn over >

DBD370(EP)

■ What we want you to do

Will you kindly supply a factual report on this form, based on your knowledge of the patient, and on their records. Then sign and date page 5. A special examination is not required.

Please include in your report any relevant information contained in letters or reports from hospitals or consultants. If you think it essential to send us originals or copies of any letters from consultants, **please obtain the author's consent and let me know whether they agree to the correspondence being used in connection with this claim.**

If you decide to change an answer on this report please cross it out and initial it. Then put your new answer next to your old one. Please do not use correcting fluid.

If a bodily function can only be carried out with considerable difficulty most of the time, it should be considered as unable to be performed.

Important

- If this patient has died or recently moved to another practice please still complete this report.

■ Harmful information

We may have to send a copy of your report to the patient. We can **only** withhold information from the patient which would be harmful to their health. Will you please put any such information on page 6 of this form.

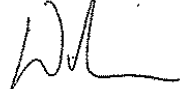

Please note we cannot withhold information on any other grounds.

■ What to do next

As the patient's entitlement to benefit is involved, it would help us if you can complete and return this report to us before 12 / 4 / 01.

- Please return your report in the envelope we have sent you. It does not need a stamp. I also enclose a form for you to claim a fee of £ 17.00.

Yours sincerely

Dear Sirs

Stuart Beattie
DOB: 14.11.60

Thank you for your enquiry about this patient.

Mr Beattie consulted me on 15th June 2000, for a repeat prescription of his routine medicines and whilst there complained of back pain and said he was unfit for work. It is difficult assessing these things and fitness for with back pain but I gave him a sick line for it. I do not recall being advised at the time that the sick note was really to cover him against attendance at the social work for probation. He was certainly fit enough to attend the surgery to pick up his prescription and sick line and I thought I was signing him off sick for work as opposed to attendance occupation. He also saw me on 11th July, for a further repeat prescription and sick line for a month. I then saw him again on 21st July, a week early for his repeat prescription and have no record of giving him a further sick note.

Going back through this gentleman's records, I note that I actually referred him to the physiotherapy department on 15th March 2000, on account of his back pain, which was described as being of long-term. In it I noted I had tried him with some home exercise sheets and given him different types of painkillers, with no effect. At the time he had been complaining of spasms of pain, which would last up to twenty minutes or more. I then received a letter back from the combined orthopaedic/physiotherapy spinal clinic, informing that he had failed to keep his appointment on 24th August with them. I broached the subject with Mr Beattie the following month and he claims he never received the appointment. I therefore referred him back again and note a further letter of 18th January 2001, a result of Mr Beattie continuing to claim he failed to receive the appointments. He is yet to be seen by the physios.

In summary, yes Mr Beattie had consulted me during the period of June and July about his back and had asked me for sick lines for being off work but I am unaware that these were in fact for probation. I note that he was fit to attend the surgery and am therefore surprised that he failed to attend the social work department.

I hope you find this of help to you in assessing your client's predicament.

Yours faithfully

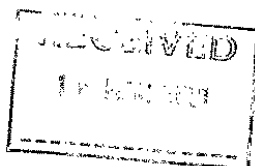

Dr A J Montgomerie

Dear Sirs,

Our Client: Stuart McKinstrie Beattie
D.o.B. 14/11/1960

We act for the above named client.

Mr. Beattie is due to appear at Dundee Sheriff Court on the 5th April 2001 in connection with an alleged Breach of Probation. This relates to Mr. Beattie failing to attend at the Social Work Department on the 14th June 2000, 19th June 2000, 11th July 2000 and the 26th July 2000.

Mr. Beattie's position is that he was unwell on these dates and that he consulted you in relation to the above and we understand he was given medical lines in relation to some of the dates mentioned above.

We would be obliged if you could provide us with the appropriate Report confirming your contact with Mr. Beattie during this period and what your advise to him was. We also understand that you may have spoken to a Rose Sinclair Social Worker at Dundee and we would be obliged if you could confirm what contact you had with her.

We confirm we are in a position to meet your fee in respect of this matter and enclose for your attention guidelines issued by the Scottish Legal Aid Board. We also enclose mandate signed by Mr. Beattie.

Yours faithfully,

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below.

This gentleman was referred to you back in June 1999 with a history of possible seizures but unfortunately failed to keep his appointments. There is a history that he had a significant head injury with a pickaxe handle many years ago and he wonders whether this may be connected. He also suffers from epilepsy. He has been on Carbamazepine 200mg once a day. (We thought he was taking more than this) I have advised him to increase to three a day as he has had several more fits recently. His girlfriend says that he starts shaking violently and it lasts for seconds rather than minutes. He has never been incontinent but he does sweat profusely thereafter. As he has never been adequately investigated, I would be grateful if you could send him a further appointment.

He is going to be out of Dundee for three weeks now, returning on 28th February.

Thanking you for your help.

Yours sincerely

Dr A J Montgomery

I am sorry to trouble you.

I wrote to you In September after this gentleman failed to keep his appointments. He claims he has not had any further appointments sent. It is quite possible that he is still on your waiting list and has not had his first appointment yet. However he does tell me that his post went awry over the Christmas period and was concerned in case he didn't receive an appointment.

Thanking you for your help.

Yours sincerely

Dear Ms Schooling

Stuart Beattie, 36 Whitfield Avenue, Dundee
DOB: 14.11.60 0134

Thank you for your letter re the above. I have now had a chance to talk to Mr Beattie about the situation. He was telling me that he seldom actually drinks and the party was a one off occasion.

He then mentioned to me that four years ago he was in a pub when a friend of his was actually stabbed and died and this left a tremendous impression upon him. I think this was the one at the Drumgeith Bar, where a wedding party was gatecrashed and the brother of the bridegroom was killed by the gatecrashers. Subsequent to that, two years ago, Mr Beattie woke up in bed and found that his girlfriend was dead beside him. Also a couple of years ago, he lost three friends who lived in Fintry but were working a building site at Westpark halls, when the wall collapsed and they were killed under the falling masonry. He wonders whether his event was linked to these three critical incidents in his life and he really would appreciate the opportunity to talk through the issues that these raise with him.

I would therefore be grateful if he could be sent an appointment.

Yours sincerely

Dr A J Montgomery

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below.

This gentleman has suffered from long term low back pain. He also has had trouble and attended the orthopaedic clinic before with shoulder trouble. Unfortunately he is permanently stuck on Dihydrocodeine and Temazepam and I have also been trying him Tegretol to see if helps his pain. He has been trying home exercise sheets of physiotherapy, but this apparently has not been doing him any good. He says he can get spasms of pain, when he has to lean up against a wall for up to twenty minutes before it eases off.

Thanking you for your help.

DUNDEE

Dear Dr Montgomery

RE: STUART BEATTIE - DOB 141160/0134
36 WHITFIELD AVENUE, DUNDEE

I am writing to confirm our telephone conversation on the 2 February 2000 regarding the above gentleman. The referral was discussed at the Team meeting and it was decided that as he does not have a recognisable mental health problem that it was not appropriate to offer him an appointment with the Team.

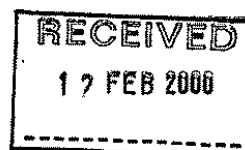

However, we do feel that the Tayside Council on Alcohol would be an appropriate service for this gentleman to access. They apparently offer counselling on a one to one basis or for couples or families and also give general advice and information. They also claim to be able to see people within two weeks which is better than we could offer. As Mr Beattie's problem seems to be trying to make sense of what happened the night he had amnesia, I believe that a service specialising in problems with alcohol would be most appropriate to help Mr Beattie work out what went wrong.

I have enclosed a leaflet on Tayside Council on Alcohol for your information.

Thank you.

Yours sincerely

Susan Schooling
Community Mental Health Nurse

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below.

This gentleman has asked that I refer him to you to be assessed. I was a little uncertain of his request as it would appear that on New Year's eve, he was celebrating and had some alcohol, which he does not normally do as he regularly takes Dihydrocodeine, Temazepam and Tegretol for chronic back pain. He is totally amnesic about what happened thereafter, but apparently he assaulted his girlfriend and he is having charges pressed against him for assault. His girlfriend is keen for him to "get help" and he says he wants to find out "what happened".

I have explained to him that in all likelihood that is was probably a combination of him having an unaccustomed load of alcohol along with his tablets, especially as he is a non-drinker. If he is not going to drink again, which is likely, I don't really understand how he can get further help. However, he was very insistent that I write to you.

I do note however, that he has a brother who is currently in prison, who has done silly things whilst under the influence of alcohol, which is partly why he is in prison. It is quite possible that there is family susceptibility her as well.

I am sorry to trouble you in this matter.

Yours sincerely

Dr A J Montgomery

Dear Dr

Montgomery

This patient did not attend on 13/12/99 or 14/12/99 at Dundee 21/9/99. for the new neurological consultation that you requested. As there is considerable pressure for appointments in the clinic, I am not sending a further appointment but would be happy to see him/her in the future if he/she wishes to attend.

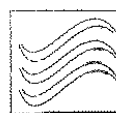

Yours sincerely

Dear Dr. Flavahan,

Stuart Beattie, 36 Whitfield Avenue, Dundee DD4 0BD

This is the 5th time that this chap has failed to attend for a Pain Clinic appointment without contacting us, four times for Bill Macrae and now once for me. We have his address as 36 Whitfield Avenue and that is where the appointment was sent to. I am afraid I am not prepared to send this chap an appointment unless we receive written assurance from him that he is going to attend.

Kind regards,

Yours sincerely,

T. HOUSTON
 Consultant Anaesthetist

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below.

This young gentleman gives a history that he was sitting in a house smoking a cigarette when he lost consciousness. His friends say that he dropped the cigarette on the ground, his eyes rolled up and his arms and legs began shaking uncontrollably. The whole thing lasted about thirty seconds. When he came round he was a bit confused and couldn't understand why everybody was standing over him. He doesn't appear to have been incontinent or bitten his tongue but his muscles ached all over and he felt sleepy afterwards and went and had a nap.

It sounds like he has had a grand mal convulsion. He has had no symptoms prior or since then. He is on regular medication some of which if he had suddenly discontinued may have provoked a fit but he denies having done this. His fundoscopy is also normal. He has chronic shoulder and back pain and for this reason he is on Dihydrocodeine 60mg four times a day, he takes 60mg of Temazepam at night to help him sleep, he is also on Tegretol 200mg bd to help the pain. He also takes Linctus Simplex.

I would be grateful for your advice concerning investigation on what clearly sounds like a grand mal seizure.

Yours sincerely

Dr A J Montgomery

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below.

This man was initially referred to the Pain Clinic by the Orthopaedic surgeons because of persistent back and shoulder pain following surgery to his left shoulder after an injury several years ago. He continues to have pain for which he is taking Dihydrocodeine tablets. There seems to have been some confusion about his previous appointments because of his change of address. He is quite insistent that he did not receive the appointment and it certainly appears from his records that at the time of the most recent appointment in October 1998 you have his address as Finella Terrace when, in fact, he has been living at Whitfield Avenue for some time.

I would be grateful, therefore, if you would consider once more re-appointing him.

Yours sincerely

Dr C Flavahan

Dear Dr. Montgomery,

Stuart Beattie, 103 Finella Terrace, Dundee DD4 9NE

You may remember that this gentleman was referred to the Pain Clinic last year but failed to keep his appointment. We re-appointed him and once again he failed to appear. I therefore wrote to you saying that we wouldn't be sending him another appointment unless specifically requested to do so. You kindly wrote saying that he had given an undertaking that he would come on this occasion so we sent him an appointment for today but once again he failed to attend. We will not be re-appointing him unless requested as obviously this is a waste of valuable clinic time.

Yours sincerely,

Bill Macrae

MR STEWART MCKINSTRY BEATTIE	10/09/1998		

Payment of benefit and the award of National Insurance credits due to incapacity for work are subject to an incapacity test. If a customer satisfies the test or is incapable of work, they no longer need to send us medical certificates.

6175/0014

Now go to the next page

10/09/1998

PAGE 02 OF 02

MR STEWART MCKINSTRY
BEATTIE

REF: WL632831C

The patient shown above has satisfied the incapacity test or is treated as incapable of work so we do not require further NHS medical certificates for this person's present claim for benefit. However, we may need to contact you for further information about your patient in the future.

Proof of incapacity or illness may still be required for other interested groups or organisations such as employers and insurance companies. The provision of this information is not usually an NHS requirement.

If your patient makes another claim for benefit in the future, we will require medical certificates from the date of incapacity.

The booklet 'A guide for registered medical practitioners' gives you more information. If you do not already have this booklet, you can get it from your local Family Health Authority or Health Board.

If you want to ask us anything about this letter, please get in touch with us. Our phone number and address are at the top of this letter.

Yours sincerely,

IB74

■ INCAPACITY FOR WORK

Patient's name : Mr. Stuart BEATTIE

Date of Birth : 14/11/60

This patient has been claiming benefit because they are incapable of work. Their ability to work was recently assessed using the *all work test*.

The adjudication officer has decided that your patient is capable of work from 25/03/98. Adjudication officers are people who decide whether the law says someone is entitled to benefit or not.

The adjudication officers base their decision on:

1. information given by your patient; and
2. a detailed medical assessment carried out by a doctor from the Benefit Agency Medical Service.

If the adjudication officer decided that there are any limitations or restrictions on your patient's ability to work, a summary of these will have been given to your patient.

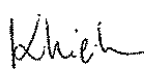

■ What this decision means

You no longer need to give your patient any more medical certificates unless:

1. your patient's condition becomes significantly worse; or
2. your patient wants to claim benefit because of a new medical condition.

■ Where to get more information

You can get more information about what to do now and in the future in the booklet entitled *A Guide for Registered Medical Practitioners*. If you do not have a copy you can get this booklet from the Health Authority you have a contract with.

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below.

I spoke to this gentleman today about his failure to attend your appointment at the Pain Clinic in April of this year. He tells me that he had the 'flu and that he 'phoned up to tell the clinic. He maintains that he is still having a lot of trouble with his back and his shoulder and I would be grateful for another appointment. I note that he is currently appealing against a decision by the Regional Medical Officer that he is now fit for work.

He continues on Dihydrocodeine, Temazepam, Carbamazepine and Simple Linctus.

Yours sincerely

Dr A J Montgomery

DUNDEE

Dear Dr Montgomery

Stuart Beattie, 103 Finella Terrace, Dundee

Diagnosis: Painful right shoulder, ?neurogenic.

Thank you very much for re-referring this patient to Mr Dent. I have seen him and he says that he has had pain and clicking in his right shoulder for quite some time, with all of his arm going dead. The pain is like a knife cutting through mainly in his arm, elbow and forearm, which is not relieved by painkillers. I note that he is on Dihydrocodeine and Temazepam 60 mg at night.

He also had his left shoulder badly twisted behind his back and has got a flexion deformity with limitation of extension by 20 degrees, which is quite painful. X-ray revealed no bony injury, but effusion in the elbow joint. He has had some physiotherapy to improve the range of movement, but has still got painful limited movements of his left elbow.

His right shoulder was x-rayed again today which did not show any significant difference from the previous x-ray taken in October 1996, baring some heterotopic calcification at the lateral end of the clavicle and base of the corocoid process.

I discussed his case with Mr Dent and he feels that he will benefit by asking Dr Macrae for pain control and he has not been given a follow-up appointment at this Clinic.

Yours sincerely

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below.

I am sure you remember this gentleman on whose right shoulder you operated. I am not sure whether he ever completed his course of physiotherapy. He told me that the girl who was doing his physio was moved to Ninewells and he never received a further appointment. He is now left with quite a stiff shoulder and he is unable to raise it very far up behind his back and it certainly clicks quite pronouncably when he rotates it in front of his chest. He says it aches all the time. Things may not have been helped when the police sat on him at the end of May. He incidentally also hurt his left elbow at that time and is now unable to fully extend it with pain in his biceps, body and possibly the head of biceps in his forearm. I have referred him to Kemback Street for that to see if some stretching will help it.

He continues to take Dihydrocodeine and Temazepam 60mg at night along with his Flixonase nasal spray.

Thank you for your help.

Yours sincerely

Dr. A J Montgomery

☐ Incapacity for work

Patient's name

STUART M BEATTIE

Date of birth

14/11/60

This patient has been claiming benefit because they are incapable of work. Their ability to work was recently assessed using the *all work* test.

The adjudication officer has decided that your patient is capable of work from 20/9/96.

Adjudication officers are people who decide whether the law says someone is entitled to benefit or not.

The adjudication officer based their decision on

- ☐ information given by your patient, and
- ☐ a detailed medical assessment carried out by a doctor from the Benefits Agency Medical Service.

If the adjudication officer decided that there are any limitations or restrictions on your patient's ability to work, a summary of these will have been given to your patient.

☐ What this decision means

You no longer need to give your patient any more medical certificates unless

- ☐ your patient's condition becomes significantly worse, or
- ☐ your patient wants to claim benefit because of a new medical condition.

☐ Where to get more information

You can get more information about what to do now and in the future in the booklet *A Guide for Registered Medical Practitioners*. If you do not have a copy, you can get this booklet from the Health Authority you have a contract with.

Dr. A. Montgomery,
Tay Court Surgery,
50 South Tay Street,
DUNDEE

Dear Dr. Montgomery,

Re: Stuart Beattie,
103 Finella Terrace, DUNDEE

This patient had a previous Bosworth operation which did not succeed and so he had resection of the distal third of his right clavicle. At the moment he is complaining of pain and restriction of movements, particularly abduction of the right shoulder. The muscle group around the shoulder, however, is pretty good and he has since been able to recover most of his function through physiotherapy so he has been referred for a course of physiotherapy course and we will be seeing him again in due course.

Yours sincerely,

U. Prakash,
Specialist Registrar

To Whom It May Concern

STUART BEATTIE, 103 FINELLA TERRACE, DUNDEE, DOB, 14.11.60

This gentleman is continuing to get significant problems with his left shoulder. He had a previous fixation with a coraco-clavicular screw which was later removed along with excision of the lateral head of the right clavicle. Despite physiotherapy he is still getting bother and has been referred back to Mr. Dent's clinic for a further opinion. It is possible that he will require further surgery. I personally feel that he is unable to work as a result in the interim.

Yours faithfully

Dr. A J Montgomery

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below.

I am sure you remember this gentleman on who's shoulder you operated in February. Unfortunately he is still getting a lot of pain and discomfort. I note he didn't complete his physiotherapy course earlier this year. He has asked me to refer him back to you as his life is really getting miserable. He is taking Dihydrocodeine, Temazepam and Diclofenac.

Yours sincerely

A J Montgomery

Dear Dr. Montgomery,

Re: **Stuart Beattie,**
103 Finella Terrace, DUNDEEDATE OF ADMISSION: 14.12.95
DIAGNOSIS: Right acromio-clavicular joint dislocation with failed fixation

Mr. Beattie came in for removal of screw and excision of distal clavicle. Unfortunately he attended late, failed to go through the admissions desk, and had eaten his breakfast. Surgery has been postponed and his name will be re-listed.

Yours sincerely,

P. Henman,
Orthopaedic Registrar

Dear Dr. Montgomery,

**Re: Mr. Stuart Beattie,
103 Finella Terrace, DUNDEE****DIAGNOSIS:** AC joint dislocation
MANAGEMENT: For removal of screw and excision distal end of right clavicle

Mr. Dent reviewed this man in the Clinic today. Unfortunately the Bosworth screw has come out of the coracoid and is no longer maintaining the reduction of the clavicle. He has therefore been put on the waiting list to have the screw removed and excision of the distal end of the clavicle to relieve his persistent symptoms.

Yours sincerely,

**M. M. Orr,
Senior Orthopaedic Registrar**
