Patients Presenting Complaint: rib pain Clinical Narrative: Investigations Requested in ED: Pathology Computerised Tomography, X-ray plain film, Clotting studies, Full blood count (FBC), Urea & Electrolytes (U&Es), Liver function tests (LFTs), C reactive protein (CRP), Arterial / capillary blood gas, Venous blood gas, Electrocardiogram (ECG) Radiology Opinion Sought From Acute medicine Seen By Lucy Bates			
Problem/Diagnosis		Treatments and Procedures (e.g. suturing/manipulation)	
Renal / ureteric colic due to stone, Ms Margery presented to ED with left sided flank pain and difficulty breathing on a background on longstanding cough. Observations and chest x-ray were unremarkable. She had widespread wheeze on auscultation and tenderness over the left lateral chest wall. Urine dip found haematuria so CTKUB was requested to exclude ureteric colic. She was admitted under the medical team.		Intravenous cannula, Intravenous drug : bolus, Administration of medication,
