Problem being referred

Dear Colleague

I shall be most grateful if you could review and advise on the further management of this 50 year old lady with history of painful feet for more than 2 years and she is now finding it very difficult to walk. She was referred to podiatry back in October 2017, but unfortunately she does not meet their criteria for review. X-rays of the feet, showed mild degenerative changes of the left foot, seen at the first metatarsophalangeal joint and suspicion of erosions developing at the condyles of the proximal phalanx of the great toe. Right foot was essentially normal.

On examination she had warm well perfused legs with mild bunion on both big toes, globally tender feet from hindfoot to toes, no erythema or swelling ?? hyperesthesia D pedis felt both feet.

In view of her history of ongoing pain which is effecting her ability to walk, I would be most grateful for your further assessment and onward management.

Thank you for your assistance.

Yours sincerely

Dr U Ota
