RE: Katrina Margery 24/05/1967 400 067 0514
1 Wing House, Wing Road. Leysdown on Sea ME12 4QR

Hi,

The above lady attended the Wound Medicine Centre today for initial wound assessment, including Doppler studies. Doppler readings are slightly elevated, showing possible signs of calcification to arteries:

ABPI Rt Leg 1.3mmHg

ABPI Lt Leg 1.3mmHg

We will continue to see this lady weekly to redress her wound and we are applying reduced compression due to the Doppler readings.

Please find attached a prescription request for dressings, thank you.

Kind regards

Sian Bale (Kent)

Tegaderm foam adhesive						
Sorbsan alginate						
Clinisorb Charcoal						

Non Formulary Items

Name of Item	Size/Details	Quantity Requested
UrgoClean Activa Compression Hosiery	10x10cm Black Closed Toe Medium Below Knee	5 X2 pairs
Rationale for use of non-formulary item Katrina has a long standing mixed aetiology leg ulcer, with a thick sloughy wound bed which on formulary dressings are not debriding. Doppler readings are slightly elevated so patient cannot tolerate full compression (40mmHg) only Class I (14-17mmhg)
