Dear Dr Frood

SAMUEL ROBERTSON - d.o.b. 02/05/1956
10 Companys Close, Weston, Runcorn, Cheshire, WA7 4NA

Diagnosis: Avulsion fracture tip of distal fibular left ankle, five weeks ago.

Outcome: Reassure and discharged.

I reviewed Mr Robertson in the clinic. He has been comfortably weight bearing in the cast for the last four weeks.

On examination after removal of the cast, there is not tenderness. The ankle is stable on varus stressing and anterior draw test was negative.

Plan: Reassured and discharged.

Yours sincerely

Mr Saurabh Odak

Dear Dr Thackray

Re: **Mr Samuel Robertson - 02/05/1956**
10 Companys Close, Weston,, Runcorn, Cheshire, WA7 4NA

DIAGNOSIS: Hyperhidrosis

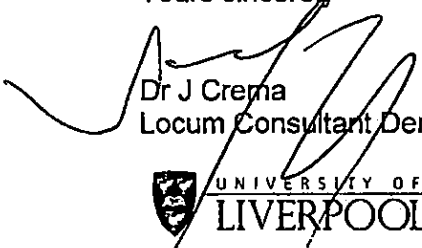

TREATMENT: Oxybutynin 5 mgs one tablet daily for one week, one tablet twice a day for one week, one tablet three times a day for 10 weeks
Requested catecholamines and metanephrines

FOLLOW UP: 3 months

Thank you very much for referring the patient Mr Samuel Robertson. I saw this patient that I have met today in the Dermatology Department. He attended the clinic with his wife. He is a 58 year old gentleman with a history of sweating for 2 years. It is worse on his head. He has never had treatment for this. His current medications are Ibuprofen, Lisinopril, Memetasone Spray, Omeprazole, Paracetamol, Simvastatin and Verapamil. Today I have discussed with him the possible ways to try to treat hyperhidrosis and we will try Oxybutynin. I will check the catecholamines and metanephrine levels as well. A follow up appointment has been arranged for 3 months' time.

Kind regards,

Yours sincerely

Dear Dr Beynon

Re: **Mr Samuel Robertson - 02/05/1956**
10 Companys Close, Weston, Runcorn, Cheshire, WA7 4NA

Diagnosis: Hyperhidrosis

Treatment: Oxybutynin 5 mgs three times a day

Follow Up: 6 months

I have reviewed Samuel Robertson who has a history of hyperhidrosis. We started Oxybutynin for him in July 2014. We did blood investigations on 15 August 2014 and his metadrenalines were all normal. He's very happy with the outcome of the treatment and his quality of life has improved because he's not sweating as much as before. He thinks he is seventy per cent better.

Because the current treatment has been successful I told him to stay on Oxybutynin 5mg three times a day. I would appreciate it if you would continue to supply him with this medication. I will see him again in clinic in 6 months time.

Dear Dr Chauhan

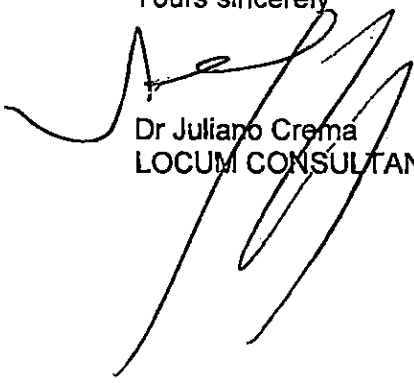

Re: Mr Samuel Robertson – 02/05/1956

10 Companys Close, Weston, Runcorn, Cheshire, WA7 4NA

Thank you for your letter dated 3rd June 2015. I believe Samuel Robertson did not DNA'd his dermatology appointment in April 2015. He has been taking Oxybutynin three times a day to treat his hyperhidrosis. The symptoms have improved with this medication, so my advice would be to keep the Oxybutynin 5 mg three times a day on his repeat prescription and he could take on a regular basis to keep his symptoms under control. If this medication starts to fail you perhaps could re-refer him back to us.

Kind regards

Yours sincerely

Dr Julian Crema

SAMUEL ROBERTSON - d.o.b. 02/05/1956
10 Companys Close, Weston, Runcorn, Cheshire, WA7 4NA

Diagnosis: dislocation DIP joint little finger 1 week ago

Plan: continue with neighbour strapping for 2 weeks and we will see him then for possible full mobilisation and out of the neighbour strapping

This gentleman was playing piggy in the middle a week ago with his grandchildren, when accidentally he landed on his left little finger. He attended A&E where X ray was taken which showed a DIP joint dislocation of the left little finger.

On clinical examination today out of the neighbouring strapping there is slight tenderness over the PIP joint of the left little finger, no bony tenderness, no neurovascular deficit, good movements in the fingers with just a little bit of stiffness at the end, no rotational deformity. His X ray shows dislocation with no associated fracture.

I have reassured the patient from this point of view. I have explained to him to stay in the neighbour strapping for a further 2 weeks and we will see him in 2 weeks' time, and if at this time everything is ok he will be fit for mobilisation.

Yours sincerely

Dear Dr Thackray

Re: Mr Samuel Robertson - 02/05/1956
10 Companys Close, Weston,, Runcorn, Cheshire,, WA7 4NA

Diagnosis: Seborrhoeic keratosis on left arm
Follow up: Discharged

Thank you for referring 59 year old Samuel who has a lesion on the left arm present for about 10 years. It occasionally gets crusty. I understand that you are slightly worried as he had a previous melanoma excised on his left thigh about 10 years ago.

On examination over the left upper arm, there is a 6mm well demarcated greyish lesion with a papillomatous surface. There are no sinister features under dermoscopy.

This is a seborrhoeic keratosis. I have reassured him that it is a benign lesion. As it is asymptomatic, he has been discharged.

Yours sincerely

Dr E Pang
Consultant Dermatologist

Problem	Dressing of wound (Review)
Comment	Wound to left thigh shows signs of clinical infection, so seen by Dr. Cottier and anti-biotics prescribed. Applied aquacel following cleansing with n. saline and bordered biatain to occlude and secure.
29-Apr-2003	District Nurse Clinic MCKENNALL, Jamie (Mr)
Problem	Dressing of wound (First)
Comment	graft appears not to have taken, slough present, photo attempted but did not develop, small cavity filled with aquacel and biatain adhesive, reveiw on friday.
25-Apr-2003	G.P.Surgery SCOTT, Barbara (Mrs)
Problem	Malignant melanoma of thigh (Review)
Comment	I visited today, seen at hospital this week, donor site to rt. leg healed, graft site to lt. leg has failed, bandage had rolled down and caused bleeding, ? this disturbed graft. I cleansed it and dressed with biatain, it is aprox. 8 cms inwidth but will need full assessment when he comes to clinic on Tues, at present the wound is fairly clean but there is some yellow around margins, I have this may develop int an infection but will be monitored, he and his wife are willing and capable to change the dressing if it comes off, I have explained self-care. Review on Tuesday. Painful but taking analgesia, he is speaking to Dr. Frood later re same.

Dear Dr Alexander

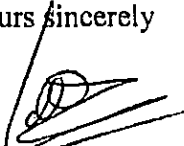

SAMUEL ROBERTSON - d.o.b. 02.05.1956
10 Companys Close, Weston, Runcorn, Cheshire, WA7 4NA

Date of Injury: 21.9.13

Nature of Injury: ~~Cross~~ ^{with} fracture right small finger distal phalanx with mallet deformity.

History: This gentleman caught his finger in the fire door when the dog pushed it shut, sustaining the above injury. He came to A&E as he was unable to extend his DIPJ. X-rays confirmed a small posterior fragment. He has therefore gone into a mallet splint. He knows how to look after this. He will see us again in six weeks' time with splint off and assessment of function.

Yours sincerely

Mr I M Shackleford MBBS FRCS Ed Orth
Consultant Orthopaedic Surgeon

Dear Dr Frood

SAMUEL ROBERTSON - d.o.b. 02/05/1956
10 Companys Close, Westön, Runcorn, Cheshire, WA7 4NA

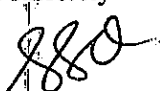

Diagnosis: Avulsion fracture tip of distal fibula left ankle one week ago.

Outcome: Immobilise in a below knee weight bearing cast for four weeks.
Review in four weeks for removal of cast and to commence normal mobilisation.

I reviewed Mr Robertson in the clinic. He is otherwise fit and well. He is the Carer for his Wife full time. He sustained this injury when he twisted his ankle while coming off a hard pavement onto soft grass. He immediately felt pain. He went to Halton and was diagnosed as above. He mentioned that he is an ex-smoker who stopped smoking about two years ago.

On clinical examination there was no tenderness on the medial side. However, there was tenderness around the fracture site. Check x-rays confirm the diagnosis. I have shown the x-rays to Mr Robertson as well. The plan would be as above. Kind regards.

Yours sincerely

Mr Saurabh Odak

Dear Dr Alexander

SAMUEL ROBERTSON - d.o.b. 02/05/1956
10 Companys Close, Weston, Runcorn, Cheshire, WA7 4NA

Diagnosis

Follow up of bony mallet right little finger - 21.9.2013

I reviewed this gentleman in the clinic today. He has about a 20° extension lag. Apart from that he is doing well. He is non-tender at the fracture site. There is some skin irritation at the dorsum due to the splint. There is no need for further splinting now.

He has therefore, been discharged back to yourself.

Yours sincerely

Mr Seif Sawalha
Specialist Registrar in Orthopaedics

20-Feb-2024 11:43 Administration note (WEAVER VALE PRACTICE) DOS SANTOS, Julie (Mrs)

Comment Task sent to me to review endo Dr thota's letter 30/1/24 (typed 7/2/24)
Requests GP to issue 3 month course of folic acid and also to issue vitamin d 800iu (2 daily in winter and 1 daily in summer).
Note on Alendronic acid so vit d levels should be kept at least 50 (current bloods showed Vit D level was 43)
However also note ongoing issues with raised calcium (primary hyperparathyroidism)
May need to keep an eye on calcium levels creeping up with Vitamin d
Can see NA already issued these meds on 7/2 and is seeing pt on 11/3 so no further action for me

Additional	Short message service text message sent to patient (procedure) In an attempt to reduce the wait times on the telephones. The practice will be offering a 'Call-Back' service following an upgrade to our telephone systems. From 10th January 2024 you will hear a message which will tell you how to request a call back. However, you will still have the option to remain on the line if you need an urgent appointment. Please note however, that if you ask for a call back, you will need to be available to answer your telephone on the first attempt as we are unable to make multiple calls. If you miss the call, you will need to call the surgery back.

15-Aug-2023 10:15 GP Surgery (WEAVER VALE PRACTICE) CHOUDHURY, Tariq Lutfur Rahman (Dr)

History History and background reviewed
Known primary hyperparathyroidism > recently underwent PET scan which reported possible 5mm parathyroid adenoma
Describes numbness and pins/needles in both feet getting worse over the past few months
Has been taking tramadol and amitriptyline prn but only slight relief
Reports waking up 2-3 times per night but this is normal for him and going on for several years
Has been listed for parathyroidectomy +/- neck exploration to improve symptoms

Examination Appears well
Comfortable at rest

Comment Discussed options
Sx likely in keeping with primary hyperparathyroidism
Try alternative neuropathic analgesia
Advised on sedation, risk of resp depression alongside tramadol, to take sparingly prn
If no better to seek further medical advice

Medication Pregabalin 50mg capsules One To Be Taken Upto Three Times A Day 56 capsule

Comment	Patient mobile telephone number 7999732426 SMS text message sent to patient Dear Mr Robertson, 2 of 2 It would be useful to get a 24 hour urine collection for your calcium level before you see the hospital team about your calcium. If you could collect the urine form from us for this that would be great. You would then need to collect the 24 hour urine bottle from Halton hospital pathology reception. This website gives some information on how to perform this test: https://labtestsonline.org.uk/glossary/urine-24 Thanks, Dr Ramona Knox Weaver Vale Practice Scheduled to send on 23/08/2022 08:00:00

31-May-2022 08:50 GP Surgery (WEAVER VALE PRACTICE) ELLIS, Hannah (Dr)

History seen with wife
for over a year has had reduced sensation balls of both feet when walking left
>right
also in bed at night pain and discomfort which wakes him up
x-rays dec 2021 showed mild degenerative change
has had multiple bloods, mainly for the ix of hypercalcaemia
hba1c aug 2021 was normal
no trauma or injuries prior to symptoms starting
symptoms came on suddenly
no back pain
no leg symptoms/sciatica type pain
tramadol not helping with foot pain

Examination alert and comfortable at rest
gait appeared normal
O/E - blood pressure reading 152/80 mmHg
able to get on and off bed unaided
inspection feet multiple superficial blood vessels noted right >left
both feet warm, DP easily palpable on left but not palpable on right, CRT 2secs
both big toes
normal sensation both feet
normal power both feet
plantar reflexes equivocal and not able to elicit ankle jerk

Comment ?cause
recheck hba1c with bloods next week
for healthy legs doppler
ref neurology for further ix ?nerve conduction studies
stop tramadol
trial amitriptyline, discussed how to take and side effects
also BP raised, has home monitor and generally not as high on this - monitor daily
for next 2 weeks then let me know results
review as needed
he is happy with plan

Medication Amitriptyline 10mg tablets 1-3 tablets at night (can increase every 3 days to a maximum of 3 tablets) 84 tablet

Test Request Blood Sciences - Unknown specimen
Test Request : HbA1c

Test Request : Vitamin D (Total)

25-Feb-2022 21:42 accuRx Consultation KNOX, Ramona (Dr)

Comment Patient mobile telephone number 7999732426
SMS text message sent to patient Dear Mr Robertson, I have reviewed your bloods today and these show that you have a high calcium and you are dehydrated on the bloods which is affecting your kidney function. Both of these issues can be caused by the medication indapamide which you are taking. I would recommend that you stop the indapamide and push oral fluids to ensure you are well hydrated. We will need to repeat your bloods in 1 week. Please could you come in and see me at 8AM on Monday so we can review you. If not please contact on Monday to arrange an alternate time. Thanks, Ramona Knox Weaver Vale Practice

11-Feb-2022 13:01 Administration note (WEAVER VALE PRACTICE) WHITELEY, Abby (Dr)

History Managed to get hold of the patient
No overt symptoms of high calcium
No urinary sx
No weight loss
Explained rationale for having bloods taken including PSA- patient happy for this to be checked and aware if comes back elevated will need further ix

11-Feb-2022 09:11 Administration note (WEAVER VALE PRACTICE) WHITELEY, Abby (Dr)

History Note NI previous consultation with patient regarding raised calcium level
Plan was for repeat and if still elevated for further ix
Calcium results in my inbox
Adjusted Calcium level 2.74 (2.66 in August and then 2.67 in October)
TYhen was taking vit D and calcium tablets but stopped taking them

Comment Tried to contact the patient at 09:12 but unfortunately pt did not answer
Repeat calcium along with PTH, Vitamin D, TFT's, PSA and serum electrophoresis - will post out
Will try to contact patient again to update him on the above

Comms Hub - Email	Patient Email: sammyrob56@gmail.com Message Sent: Dear Samuel. Thank you for your request for an alternative medication for Oxybutynin 5mg, unfortunately there is not an alternative for this medication, therefore the GP has printed the prescription off for Oxybutynin and left it in reception for you, so you can try other pharmacies. If you still struggle to get the medication it might be worthwhile speaking to Dermatology, to see if they can either prescribe something else or send us an email advising us of something we can prescribe as an alternative. Best wishes, Weaver Vale Practice General Enquiries: weaver.vale@nhs.net Prescriptions: weavervale.prescriptions@nhs.net Website: http://www.weavervalepractice.nhs.uk/ Tel: 01928 711911 Campaign Description: A Message From Your Practice

Comms Hub - Email	Patient Email: sammyrob56@gmail.com Message Sent: Dear Samuel We have received the results of your recent CT scan organised by the Lung Health Team. It has shown some calcification of the blood vessels that supply blood to your heart. This is sometimes known as hardening of the arteries. Hardening of the arteries is an inevitable part of aging but can in some cases lead to heart disease. The extent and speed of calcification of the blood vessels can be altered by factors in our lifestyle Getting regular exercise, eating a healthy diet, quitting smoking and making sure your blood pressure and cholesterol levels are normal will help keep your arteries healthy. We would like you to book an appointment to see our HealthCare Adviser who will take your BP, weight and height and provide you with afurther information about keeping your heart healthy. Book Appointment Best wishes, Weaver Vale Practice General Enquiries: weaver.vale@nhs.net Prescriptions: weavervale.prescriptions@nhs.net Website: http://www.weavervalepractice.nhs.uk/ Tel: 01928 711911 Scheduler Link: https://blinx.uk/rOJUqMt Campaign Description: Healthy Lung Appointment

17-Dec-2025 10:24	Administration note (WEAVER VALE PRACTICE) CRANDLE, Laurie (Ms)
Problem	Review of LFTs
History	Patient's ALT was slightly deranged at 37 iu/L after starting him on ezetimibe. Repeat Dec 25 now shows normal AST and ALT. GGT has reduced from last test Sept 25- 123 --> 109 iu/L. US June 24- showed fatty infiltration. GGT is chronically raised. FIB-4 1.15 points- advanced fibrosis excluded. I will order a repeat for 6 months time via admin. Lipids are to target on rosuvastatin and ezetimibe. No further intervention necessary.

08-Dec-2025 11:16	GP Surgery (WEAVER VALE PRACTICE) MOHAMED, Reshma (Dr)
History	Presents with epigastric pain radiating upwards, which started last Tuesday and has been worsening. The pain occurs after eating. Reports constipation but no haematochezia. No acid reflux, regurgitation, or vomiting. No difficulty swallowing. No known trigger, such as spicy food. Current medications: Omeprazole 20mg, alendronic acid. Takes alendronic acid every Monday. Counselling on correct administration: must be taken on an empty stomach, 30 minutes before food or other medications, and to remain upright for at least 30 minutes after taking it to prevent oesophageal inflammation.
Examination	: Abdomen is soft and non-tender. Normal bowel sounds. No masses palpated. O/E - blood pressure reading 120/68 mmHg HR 70
Comment	Suspected acid reflux flare-up - Likely exacerbation of acid reflux, - Increase Omeprazole to 20mg twice daily. A one-off prescription has been issued to Superdrug pharmacy. - Advised on correct administration of alendronic acid to prevent oesophageal irritation. - Follow-up telephone review scheduled for 24/12/2025 between 8:30 and 9:30 am to assess response to treatment. If symptoms persist, consider referral for endoscopy.

Comment	Patient mobile telephone number 447999732426 SMS text message sent to patient Dear Mr Robertson, I have just reviewed your cholesterol result from September and your cholesterol is now to target. Please continue on the rosuvastatin 20mg and ezetimibe so this tight control of your cholesterol is maintained. I have ordered a repeat liver function test as two of your markers were raised on the last test but not to concerning levels. This will allow me to assess the trend. Many thanks, Laurie Crandle Weaver Vale Practice Sent on 05/12/2025 at 15:59

05-Dec-2025 15:50	Administration note (WEAVER VALE PRACTICE) CRANDLE, Laurie (Ms)
Problem	Lipid optimisation for the primary prevention of CV disease
History	We started patient on ezetimibe Aug 25 to optimise patient's lipids for primary prevention of CV disease. Patient was already on rosuvastatin 20mg. Bloods were due October but came back a little early.
Examination	Lipids Sept 25 show non-HDL was 2.1 mmol/L. LFTs Sept 25 show slightly raised ALT at 37 iu/L and raised GGT at 123 iu/L. Other TA's normal.
Comment	Non-HDL should be 2.6 mmol/L or less for the primary prevention of CV disease. Patient's non-HDL is 2.1 mmol/L so patient is to target. LFTs slightly raised so I will order repeat now to assess the trend and let patient know.
Test Request	Blood Sciences - Unknown specimen Test Request : Liver function test

History	seen with husband . Patient presents with heaviness in both legs for a few months, affecting his ability to walk.History:- Reports heaviness in both legs for a few months, making it difficult to walk. Describes the sensation as heaviness rather than bone or muscle pain. Also reports pain in both thighs. Pain is worse on standing. No associated skin changes, rashes, lumps or bumps.- No weight loss.- PMH: history of melanoma in the thigh), peripheral neuropathy, high cholesterol, sciatica. No history of seizures.- DH: statin (unspecified), ezetimibe (recently started), amitriptyline 2 at night.- SH: reports has cut down on alcohol intake.Examination:- Hips: full range of movement.- Legs: good power on straight leg raise bilaterally. Sensation to light touch intact.Impression:1. Heaviness in legs, cause uncertain.- Differential diagnosis: medication side effect (statin/ezetimibe), peripheral neuropathy.Plan:- Previous MRI spine reviewed, requested by physiotherapy, showed age-related degenerative changes only, no sinister findings.- Trial stop of ezetimibe to see if symptoms improve. Counselling on risks vs benefits of a short break from the

medication.- To start Nefopam for pain.- Follow-up in 4-6 weeks to review effect of stopping ezetimibe. Patient will book after calling reception - Safety netting: advised that if there is no improvement, further blood tests can be considered at follow-up.

01-Aug-2025 11:54	Administration note (WEAVER VALE PRACTICE) TURNER, Amy (Dr)
Problem	Altered bowel function (First)
History	Seen today by clinical pharmacist Laurie Crandle to discuss management of hyperlipidaemia. After thorough discussion with patient agreement with patient was to add Ezetimibe 10mg to Rosuvastatin 20mg prescription. See LC consultation notes. Whist here seeing LC patient mentioned a change in bowel habit to being more constipated over the past 4 months. Samuel attributed this to his statin but has also recently started Amitriptyline for peripheral neuropathy. BO 2-3 x daily previously and now OD. Stools previously normal consistency and now more firm. No pr bleeding. No weight loss.
Comment	Discussed CBH most likely related to medications however for completeness sake check FBC / ferritin and FIT test. Ezetimibe 10mg px. LC will arrange monitoring / F/U.
Medication	Ezetimibe 10mg tablets One To Be Taken Each Day 28 tablet
Test Request	Blood Sciences - Unknown specimen Test Request : Full blood count - FBC Test Request : Iron Profile Test Request : Renal profile Test Request : Thyroid function test
Problem	Mixed hyperlipidaemia (Review)
Problem	Primary prevention (First)
01-Aug-2025 11:25	Administration note (WEAVER VALE PRACTICE) CRANDLE, Laurie (Ms)
Problem	Lipid optimisation for primary prevention of CV disease
Comment	Body weight 98 kg Spoke to patient today about his cholesterol management. Patient takes rosuvastatin every day with no missed doses. Patient has good diet but we identified changes he can make. Patient is obese- informed and offered referral to fresh start weight management service- patient declined. Patient is now vaping not smoking- not ready to give up vaping yet. O/E - blood pressure reading 132/78 mmHg BP in normal limits- on BP medication. Gave patient options to uptitrate lipid lowering therapy- leave on rosuvastatin 20mg (little change to non-HDL) or add in ezetimibe 10mg tablets. Patient is happy to add in the ezetimibe to the rosuvastatin 20mg tablets.

AT to issue the script for ezetimibe today.
I will call patient in 1-2 weeks to see how he is getting on with it but patient is to call the surgery if he experiences issues in the meantime.
Bloods in 2 months: Lipids and LFTs.
Target: Non-HDL 2.6 mmol/L or less for primary prevention of CV disease.

Test Request Fit Testing - Unknown specimen
 Test Request : FIT Pathway

Additional Weight monitoring Current weight 98 kg equates to 15 st, 6 lb. A 3% gain from the previous reading (95kg, 05-Apr-2024). Based on the height entry (05-Jan-2023) a healthy weight is likely to be 57 - 77kg (8 st, 14 lb - 12 st, 2 lb)
Body mass index 32 kg/m2 (calculation based on height entry 05-Jan-2023, NB prior to age 70 average height loss is 1cm per 10 years).

Comment Patient reports change in bowel habit, AT has ordered FIT test and FBC.

Patient happy to attend.

14-Jul-2025 15:11 Administration note (WEAVER VALE PRACTICE) CRANDLE, Laurie (Ms)

Problem Lipid optimisation for the primary prevention of CV disease

History Patient is on statin for primary prevention due to QRISK3 > 10%.
We swapped this patient from simvastatin 40mg to rosuvastatin 20mg April 25 to optimise lipids for primary prevention of CV disease.
Patient had fatty liver detected on US June 24.
Patient had parathyroidectomy 14/05/24 due to parathyroid adenoma.
Recently seen by GP over peripheral nerve disease 23/06/25 and started on amitriptyline.

Examination Lipids July 25 show non-HDL is 3.3 mmol/L. TG's are 2.8 mmol/L.
LFTs July 25 show GGT is raised at 91 iu/L. Other TA's normal.

eGFR March 25 = 74 mL/min/1.73m².

TSH Nov 24 normal.

HbA1c May 25 normal.

Comment Non-HDL has reduced from 3.5 to 3.3 mmol/L and TG's have reduced from 3.7 to 2.8 mmol/L. Non-HDL should be 2.6 mmol/L or less for primary prevention, so patient is not to target. Patient's TG's should also be 2.0 mmol/L or less. LFTs show GGT has increased from 70 iu/L March 25 to 91 iu/L July 25. GGT < 3 x ULN, AST and ALT normal.
To check compliance with rosuvastatin 20mg tablets.
Patient has not tried ezetimibe 10mg tablets. Ezetimibe does not interact with his current repeat meds.
Does patient smoke?
No allergies or intolerances recorded- to check.
No adverse drug reactions recorded- to check.
BMI 31 kg/m²- obese. To get updated weight.
I will call patient to discuss and offer addition of ezetimibe to rosuvastatin 20mg to optimise lipids for primary prevention of CV disease.

Problem Peripheral nerve disease (First)

History seen with wife

Subjective:- Known to have peripheral neuropathy- Pain and pins and needles in legs, mainly in feet- Pain worse at night- Struggling with sleep- Stopped drinking alcohol- No heart rhythm abnormalities
Past Medical History:- Peripheral neuropathy- Hypertension
Objective:- Blood test results normal
Assessment:- Peripheral neuropathy
Plan:- Start Amitriptyline 10mg at night for neuropathic pain and sleep- Counselling regarding common side effects including sedation and dryness- Advised to cut down Tramadol as it doesn't help with neuropathic pain- Discussed dependence and tolerance issues with Tramadol- Review as needed if symptoms don't improve
Current medications:- Pregabalin 150mg (not helping much)- Tramadol two tablets four times daily- Lisinopril for hypertension- Verapamil for hypertension

Medication Amitriptyline 10mg tablets One To Be Taken At Night 28 tablet

16-Jun-2025 07:44 accuRx Consultation (NUTTALL, Dawn (Mrs))

Comment	Dear Mr Robertson, From today, our practice is taking part in a new pilot in collaboration with all Runcorn GP practices. As part of this initiative, for certain medical conditions, you may be offered a timed appointment at the Urgent Care Centre (UCC) instead of being seen at the practice. This is to help ensure you receive the most appropriate care as quickly as possible. Thank you for your understanding and support as we work together to improve local healthcare services. Comment Patient mobile telephone number 7999732426
SMS text message sent to patient Dear Mr Robertson,A prescription will be sent automatically to your pharmacy on 28/04/25 for 43 x rosuvastatin 20mg tablets and it is then on repeat as a quantity of 28. This will align it with your other medications so that you can order them all together in future.Many thanks,Laurie Crandle Weaver Vale Practice

17-Apr-2025 13:18 Telephone call to a patient (WEAVER VALE PRACTICE) CRANDLE, Laurie (Ms)

Problem Lipid optimisation for the primary prevention of CV disease
Comment Called patient to see how he is getting on with rosuvastatin 20mg (swapped from simvastatin 40mg).
Patient has been fine on the rosuvastatin 20mg.
I will ask AG to issue a post dated Rx for 28/04/25 (due 05/05/25) for 43 x rosuvastatin 20mg tablets and then move to repeat as a quantity of 28 and this will broadly align it with his other repeat meds.
To review 2 monthly bloods as per plan.

08-Apr-2025 07:52 Accurx Consultation CRANDLE, Laurie (Ms)

Comment Patient mobile telephone number 7999732426
SMS text message sent to patient Dear Mr Robertson,As discussed last week, a prescription has been sent to your pharmacy for the rosuvastatin 20mg tablets.

This is to replace the simvastatin 40mg tablets. I will be in touch in 1-2 weeks time to see how you are getting on with it but please let the surgery know if you experience issues in the meantime. Many thanks, Laurie Crandle Weaver Vale Practice Scheduled to send on 08/04/2025 08:00:00

07-Apr-2025 14:46	Administration note (WEAVER VALE PRACTICE) GLANCEY, Andrea (Ms)
History	Lipid optimisation for primary prevention of cardiovascular disease. LC agreed with patient to switch from simvastatin 40mg to rosuvastatin 20mg and safety netted. See consultation dated 4/4/25.
Comment	Plan: stop simvastatin 40mg. Initiate rosuvastatin 20mg. Follow up call 1-2 weeks. Bloods at 2 months: lipids and LFTs. Target: non-HDL <2.6mmol/L and TG <2.0mmol/L.
Medication	Rosuvastatin 20mg tablets One To Be Taken Each Day 28 tablet This medication has replaced Simvastatin 40mg tablets Reason: Switch to higher intensity statin and avoiding interaction with verapamil.
07-Apr-2025	Docman: DOCMAN, pcti (Mr)
Additional	Attachment  Clinical Letter Warrington and Halton Hospital Physiotherapy Letter encounter
04-Apr-2025 09:41	Telephone call to a patient (WEAVER VALE PRACTICE) CRANDLE, Laurie (Ms)
Problem	Lipid optimisation for primary prevention of CV disease
Comment	Called patient to discuss details of consult below dated 04/04/25. Explained cholesterol not to ideal levels but the simvastatin interacts with verapamil and should be 20mg (but this will cause cholesterol to creep up if we lower the dose). Explained rosuvastatin does not interact with the verapamil and is more effective. Proposed swap to rosuvastatin 20mg- patient is happy to. Patient will take the simvastatin 40mg tablets until he picks up the rosuvastatin 20mg tablets and knows not to take the two together. I will ask AG to stop the simvastatin 40mg and issue rosuvastatin 20mg tablets- one daily. Bloods in 2 months: Lipids and LFTs. Target: Non-HDL 2.6 mmol/L or less and TG's 2.0 mmol/L or less for primary prevention of CV disease.
03-Apr-2025 16:01	Administration note (WEAVER VALE PRACTICE) CRANDLE, Laurie (Ms)
Problem	Lipid optimisation for primary prevention of cardiovascular disease
History	Patient is currently on simvastatin 40mg (Feb 23- now) for primary prevention. Patient has been on simvastatin 10mg (Sept 98- Feb 03), simvastatin 20mg (Sept 11-Feb 23), atorvastatin 20mg (Feb 03-Aug 11). Patient had fatty liver detected on US June 24. Patient had parathyroidectomy 14/05/24 due to parathyroid adenoma.
Examination	QRISK3 cardiovascular disease 10 year risk calculator score 19.5 % Lipids March 25 show non-HDL is 3.5 mmol/L and TG's are 3.7 mmol/L. LFTs March 25 show raised GGT at 70 iu/L. Other TA's normal. eGFR March 25 = 74 mL/min/1.73m ² . CrCl (IBW) = 76 mL/min. TSH Nov 24 normal. HbA1c Nov 24 normal.
Comment	Patient has QRISK3 > 10% so should be on a statin/ LLT for primary prevention. Patient's non-HDL is 3.5 mmol/L and should be 2.6 mmol/L or less for primary prevention (lifespan pathway guidance). Patient's TG's are 3.7 mmol/L and should be 2.0 mmol/L or less. Patient has had history of TG's being raised on and off over

the years- previous result was normal (1.8 mmol/L).
Patient is on verapamil so dose of simvastatin is not meant to exceed 20mg daily as verapamil moderately increases exposure to simvastatin.
Patient has not tried rosuvastatin and there is no interaction between verapamil and rosuvastatin.
As with simvastatin, both rosuvastatin and paracetamol increase the risk of hepatotoxicity. Patient will get LFT in 2 months then yearly thereafter.
Patient would be eligible for swap from simvastatin 40mg to rosuvastatin 20mg. Rosuvastatin 20mg is more effective than simvastatin 40mg so should reduce patient's non-HDL and TG's further. Rosuvastatin is also better at reducing TG's. I will call patient to offer swap to rosuvastatin 20mg to improve cholesterol and also due to the interaction between simvastatin and verapamil.

05-Nov-2024 10:37 GP Surgery (WEAVER VALE PRACTICE) COTTIER, Fenella (Dr)

History came in to ask fro tramadol
uses it for arthritis type pain. takes 8 a day and also has paarcetamol
All meds reviewed
Pregabalin he takes for nerve pain in feet - has FU tel call with AT for this
Oxybutinin is for sweating - helps
Takes lisinopril and verapamil 9for years) for BP which is well controlled
Alendronic acid he has been taking since PTH surgery. Prev high calcium so only on vit D

Comment adv take paracetamol reg but try and restrict tramadol to bad days - try and avoid taking 8 a day as he will develop toerance and it wont work

Problem	Numbness (New)	
History	Toes on both feet numb for >2 years. No pain. No pins and needles. Says toes get jittery and stops him sleeping. Annoying sensation that he finds problematic. Has tried Amitriptyline in the past. Currently on Pregabalin. Recent surgery for primary hyperparathyroidism. Advised this should help but it hasn't. B12 and folate in 2024 normal. Last Hba1c 30 in 2022. See consultation with Dr Anto May 2024 - ? alchol excess. Seen by neurology for the same in September 2022. Says has had nerve conduction studies but I am unable to find these results.	

Comment Chase nerve conduction studies.
Review with results.
? For up to date adjusted calcium and hba1c.

Document Blood pressure recorded by patient at home ■ Home Blood Pressure Diary

Problem **Essential hypertension (Review)**

History Has BP checked at the pharmach recently.
BP hight at 160/97.
Says has a home BP machine but hasn't checked for a while.
On Lisinopril 20mg.

Comment Advised do 7 days worth of BD readings at home and hand into reception.
Will make any medication changes based on this.

Dear Dr Johnson

Re: Forename: Samuel Surname: ROBERTSON DOB: 02 May 1956
Address: 16 Companys Close Weston Runcorn WA7 4NA

Diagnosis: Medial meniscal tear with early patellofemoral osteoarthritis - left knee.

Thank you for your referral. I saw Mr Robertson in my specialist knee clinic this morning at the Cheshire and Merseyside Treatment Centre. As you know, he has been having problems with his left knee for the past few months with episodes of giving way, occasional locking and clicking sensations and pain in the joint. He has had a recent MRI scan which shows some patellofemoral osteoarthritis but also a medial meniscal tear. The rest of the joint was in reasonably good condition.

We have gone through the results of the scan and explained the diagnosis to Mr Robertson today and explained the different treatment options. Mr Robertson feels he is currently managing his symptoms reasonably well and his knee is not causing him too much bother and is not looking for any treatment at present. I have therefore discharged him from further follow up.

Yours sincerely

URGENT PRESCRIPTION REQUEST FORM

If you require medication urgently please provide clear details for the reason for the request.

The only medications that we guarantee will be issued as urgent on the day are the following: insulin, inhalers, epipen, anti-epileptic drugs (sodium valproate, carbamazepine, phenytoin, levetiracetam, lamotrigine) addisons, contraception, GTN spray and drugs for patients with a terminal illness

Please note that the issuing of an urgent prescription is at the discretion of the doctor and based on clinical need, if refused the prescription will be processed within 2 working days.

Your local pharmacy may be able to provide you with an emergency supply without a prescription but this will be based on clinical need.

ROBERTSON	SAMUEL JOSEPH	02/05/1956
NHS No: 400 129 0375		

Dear Doctor,

Re: Abdominal Aortic Aneurysm Screening

The above named attended for an abdominal aortic aneurysm screening test recently on Thursday, 08 Sep 2022 at Princeway Health Centre.

We are pleased to confirm that the scan showed that no aneurysm was found. If an aorta is less than 3cm wide, this means there is no aneurysm. Most men have this result. No treatment or monitoring is needed afterwards. They have been notified of the outcome of the screening test and have been informed that they will not routinely be invited to attend for any further aortic aneurysm screening.

If you have any queries regarding this result, please contact the co-ordinator of the screening programme at the above address.

Yours sincerely,

Mandy Summers

Dear Dr Knox

Re: Samuel Robertson DOB: 02/05/1956
16 Companys Close, Weston, Runcorn, Cheshire, WA7 4NA

This 66-year-old gentleman did not attend his outpatient neurology appointment today. You referred him regarding reduced sensation in the balls of both feet when walking, more pronounced on the left. There has also been night pain which can wake him up. Your examination was normal except absent ankle jerks. These symptoms and signs suggest sensory axonal polyneuropathy. I have not arranged a further appointment in clinic, and I don't think he needs to see a specialist. Your plan is perfectly adequate. You provided amitriptyline to ease the discomfort. You wondered about nerve conduction studies, but these are not required unless there are atypical features, which there do not appear to be. You plan to check HbA1c, and it would also be worth checking thyroid function, B12 and paraprotein screen if not done.

If these tests were unremarkable, then review of alcohol intake is appropriate, as this is a common risk factor for neuropathy, but otherwise axonal polyneuropathies are quite common as people get older without any other clear causes. They usually gradually progress with time, but do not cause significant disability.

Yours sincerely

Dr James Holt
Consultant Neurologist

Dear Dr Cottier

Re: Forename: Samuel Surname: ROBERTSON DOB: 02 May 1956
Address: 16 Companys Close Weston Runcorn WA7 4NA

Diagnosis: Probable Primary Hyperparathyroidism

- Incidental finding, Aug 2021
- Previously on Indapamide, discontinued

Vitamin D Insufficiency ? total vitamin D 39, March 2022

Patellofemoral Osteoarthritis

Left Ankle Fracture ? 2020

Left Elbow Fracture ? 1994

Previously Fractured Fingers ? left hand

Essential Hypertension

Mixed Hyperlipidaemia

Ex-Smoker

Current Medication: Lisinopril 20mg od, Simvastatin 20mg nocte, Oxybutynin 5mg tds, Verapamil MR 240mg bd, Omeprazole 20mg od, Tramadol prn, (previously on vitamin D and calcium supplements, discontinued)
No allergies

Results: height 1.75m, weight 92kg, BMI 30, blood pressure 161/84, pulse 60
24hr urine calcium collection ? 24hr urine volume 2200ml, 24hr urine calcium 8.51 (reference 2.5-7.5) (Sept 2022)

Thank you for referring this 66 year old gentleman to the endocrine clinic with raised calcium. Fortunately, he is not particularly symptomatic from this. He did mention nocturia (2-3 times a night), however, he has a cup of tea and Horlicks before he goes to sleep and he has had this habit of nocturia for several years. It has not changed recently.

He does not suffer from any abdominal pains or constipation. As far as he knows, he has never suffered from any kidney stones in the past.

He also had a bone mineral density scan in August 2022, which shows low bone density for his age.

On examination of the anterior aspect of his neck, I could not feel any swellings or lumps, neither could I palpate any cervical lymphadenopathy in the anterior chain. He was systemically well.

Recommendations:

- 1.
2. I would be grateful if you could **prescribe a bisphosphonate of your choice** for this gentleman. I have explained that he needs to have this tablet sat upright and have it with at least 2 glasses of water to reduce reflux symptoms.
3. Up to date adjusted calcium and vitamin D levels
4. I have explained that he can have a normal diet and does not need to restrict his intake of dairy products, however, he should consume it in moderation
5. I have encouraged him to stay hydrated and to drink up to 2L of fluid a day
6. Given that there is no history of renal calculi or loin pain, it is not necessary to have an ultrasound scan of his kidneys at present
7. I would be grateful if you could **increase his Simvastatin to 40mg nocte** given that this dose is associated with greater efficacy (I have warned him about the risks of myalgia)
8. Repeat bone mineral density scan in 2-3 years time
9. Follow up in 6 months time

****See Addendum**

Kind regards.

Yours sincerely

Dr Kaushal Thota
Consultant Physician
Diabetes & Endocrinology

Addendum:

Dear Mr Robertson,

1. Thank you for having the Sestamibi scan of your Parathyroid glands. I will inform you of the results once they are available to me.
2. I have referred you to a Parathyroid Surgeon to consider surgical removal of the culprit Parathyroid gland, which is over-producing Parathyroid Hormone.
3. Finally, the bisphosphonate medication, which is used for bone protection, has a rare complication which can adversely affect your jaw and teeth. Therefore, before commencing this medication, it would be prudent to have a general check up with your dentist to assess your dentition.

4. Blood results:

Total Vitamin D 54 nmol/L - normal

Adjusted Calcium - 2.63 mmol/L - no immediate action necessary. Adhere to plan as above.

Dear Dr Cottier

Re: Forename: Samuel **Surname:** ROBERTSON **DOB:** 02 May 1956
Address: 16 Companys Close Weston Runcorn WA7 4NA

I reviewed Mr Robertson who was referred to me with hyperparathyroidism and awaiting PET choline scan, which is dated now in the Royal Liverpool hospital on 31st May 2023.

The plan is to review him with the outcome of the PET choline scan. We will discuss further in regard to surgical intervention.

I have advised the patient to be well hydrated and continue with the medication that he is on. I will keep you posted.

Yours sincerely

Dear Dr Cottier

Re: Forename: Samuel **Surname:** ROBERTSON **DOB:** 02 May 1956
Address: 16 Companys Close Weston Runcorn WA7 4NA

I reviewed Mr Robertson today, as you know he was referred to me with primary hyperparathyroidism and recently underwent PET choline scan, which reported potential 5mm parathyroid adenoma, posterior to the upper pole of the left lobe of the thyroid.

Keeping in view, his ongoing symptoms, we have discussed in detail to proceed with parathyroidectomy +/- neck exploration, to improve symptoms, although I have warned him that his symptoms may not resolve fully. Certainly it will take time for him to have full benefit of parathyroidectomy.

I have provided him with information leaflets, consented him for the procedure and listed him.

Yours sincerely

Dear Dr Cottier

Re: Forename: Samuel Surname: ROBERTSON DOB: 02 May 1956
Address: 16 Companys Close Weston Runcorn WA7 4NA

Diagnosis: Primary Hyperparathyroidism

- Incidental finding, Aug 2021
- Previously on Indapamide, discontinued
- Ultrasound scan of neck, May 2023, no parathyroid nodule seen
- Parathyroid uptake scan, Jan 2023, inconclusive, no focal increased uptake seen
- PET Choline scan, RLUH, did identify adenoma, he is currently awaiting a date for surgery

Previous Vitamin D 54 ? satisfactory
Patellofemoral Osteoarthritis
Left Ankle Fracture ? 2020
Left Elbow Fracture ? 1994
Previously Fractured Fingers ? left hand
Essential Hypertension
Mixed Hyperlipidaemia
Ex-Smoker

Current Medication: Lisinopril 20mg od, Simvastatin 20mg nocte, Oxybutynin 5mg tds, Verapamil MR 240mg bd, Omeprazole 20mg od, Tramadol prn, (previously on vitamin D and calcium supplements, discontinued), Alendronic Acid weekly (on Mondays), Gabapentin

Results: weight 93.3kg (previously 92kg in January 2023), blood pressure 158/81, pulse 64

This 67 year old gentleman attended for follow up. In his last appointment, he was not symptomatic from his hypercalcaemia and this remains the case.

His wife, Maureen and daughter Charlene accompanied him to the consultation. His wife mentioned that he has not been sleeping well of late due to numbness and paraesthesia in his feet. This has been present

for over a year. He has had blood test (HbA1c) for diabetes mellitus in 2022, which was normal.

Recommendations:

1. No change to therapies
2. Await parathyroid surgery
3. Up to date bone profile
4. I have reiterated the need for adequate hydration, particularly in the warm weather and I would aim to advise Mr Robertson to have between 1.5-2lt of liquid a day
5. Repeat dexa scan in 2 years time.

Kind regards.

Yours sincerely

electronically signed by

Previously Fractured Fingers ? left hand
Essential Hypertension
Mixed Hyperlipidaemia
Ex-Smoker

Probable Sebaceous Cyst ? right scapula region, prone to infection twice a year
Persistent Numbness & Pain ? both feet

- HbA1c normal 2022
- B12 460 (normal), folate 5.32 (reference >5.40) April 2022

Current Medication: Lisinopril 20mg od, Simvastatin 20mg nocte, Oxybutynin 5mg tds, Verapamil MR 240mg bd, Omeprazole 20mg od, Tramadol prn, Alendronic Acid weekly (on Mondays), Gabapentin

Results: weight 94.5kg (previously 93.3kg), blood pressure 174/83, pulse 69

This 67 year old gentleman attended for follow up accompanied by his daughter; I reviewed him in conjunction with Dr Christopher Hammond, Internal Medicine Trainee Year 1. On the whole, he remains

well in himself.

The problem that bothers Mr Robertson the most is the persistent symptom of numbness and discomfort in his feet, which is disrupting his sleep. Could I request you to consider nerve conduction studies to characterise this further?

I have explained that his previous tests for diabetes and vitamin B12 were normal. This symptom is unlikely to be due to raised calcium.

They enquired about the waiting times for parathyroid surgery. I have explained that there is a considerable waiting time, which has been compounded by the Covid backlog. I have suggested that they contact Mr Shafiq's secretary to get a better idea of this.

Mr Robertson has also noticed an area of induration and hardening of the skin in the palm of his right hand. There is no problem with extension or flexion of his fourth and fifth digits of the same hand. I wonder whether this could represent early Dupuytren's contracture? On a quick internet search, it does state that endocrine problems can be associated with Dupuytren's contracture. This is not affecting the function of his hand at present, which is encouraging.

Recommendations:

1. Up to date bone profile and vitamin D
2. Please consider nerve conduction studies regarding persistent numbness in both feet
3. Please prescribe Folic Acid 5mg daily for 3 months
4. Follow up in 6 months time
5. Please prescribe Cholecalciferol 800iu od (2 tabs in winter, 1 tab in summer)

Kind regards.

Yours sincerely

Dear Dr Cottier

Re: Forename: Samuel **Surname:** ROBERTSON **DOB:** 02 May 1956
Address: 16 Companys Close Weston Runcorn WA7 4NA

I reviewed this gentleman today in the ENT clinic who is scheduled to have a parotidectomy in the near future. He has been sent for a vocal cord check prior to his surgery. ENT wise he is asymptomatic.

On examination the ear, nose, throat, and neck are clear. On flexible nasal endoscopy he has bilateral, normal, mobile vocal cords.

Kind regards

RE: Forename: Samuel Surname: Robertson DOB: 02 May 1956
Address: 16 Companys Close Weston Runcorn Cheshire WA7 4NA

Proposed operation: Left parathyroidectomy

Dear Mr Shafiq,

I saw Mr Robertson in pre op clinic with his wife. He is due to undergo the procedure above next week at Warrington under your care.

He is very anxious about the surgery and hospitals in general and requested a premed to reduce anxiety prior to going to theatre, which we should be able to accommodate. He has a few medical problems, but nothing significant and he is very fit and active. I have no concerns about his airway.

They did not want to know specific anaesthetic risks in any more detail. He has chronic pain due to foot/ankle pain which he thinks is related to the hypercalcaemia. I advised him to take his Pregabalin and Tramadol on the morning of surgery and we will need to give him appropriate analgesia.

He is ok to proceed next week as planned.

(Please see the 'Pre-Operative Patient Assessment' under 'Forms' on the Lorenzo electronic case-note if more information is required about his pre-op assessment.)

Your sincerely

Re: Forename: Samuel **Surname:** ROBERTSON **DOB:** 02 May 1956
Address: 16 Companys Close Weston Runcorn WA7 4NA

I reviewed Mr Samuel Robertson, who underwent to have neck exploration for hyperparathyroidism and excision of left upper parathyroid gland. Histopathology confirmed parathyroid adenoma. Calcium has normalised fully and PTH has dropped >50% intra-operatively. I have sent another set of bloods including PTH and corrected calcium levels today and will write to you with the report.

Mr Samuel Robertson is complaining of some feeling of numbness in both feet, although he explained to me that he was examined by yourself and found nothing significant.

I will keep you updated with the blood results and may discharge this patient under your kind care.

Yours sincerely

WEAVER VALE PRACTICE

Home Blood Pressure Diary

Name: ROBERTSON, Samuel (Mr) DOB: 02-May-1956

Blood Pressure target (if applicable): aiming for lower than <135/85

Arm used: Left ☐ Right ☒

- Please use your home monitor to record your blood pressure at home for 7 days (unless your healthcare professional has specifically advised otherwise).
- Please monitor your blood pressure twice daily – once in the morning (between 6am and midday) and again in the evening (between 6pm and midnight).
- Each time, take a minimum of two readings. If the first two readings are very different, take further reading(s).

You can use the sheet below to record all of your blood pressure readings. The numbers you write down should be the same as those that appear on the monitor screen; do not round the readings up or down.

In the comments section, you can record anything that might have affected your reading, such as feeling unwell or changes in your medication. You do not need to record your pulse/heart rate.

Remember to take this diary with you to your next appointment/review.

Date	Time	Upper reading (systolic)	Lower reading (diastolic)	Comments
16/09/24	10-10 AM	155	84	high
16/09/24	8-30 PM	147	80	high
17/09/24	11-45 AM	140	79	high
17/09/24	6-20 PM	122	80	normal
18/09/24	10-30 AM	128	76	normal
18/09/24	8-30 PM	135	75	normal
19/9/24	11-30 AM	126	75	normal
19/9/24	7-00 PM	126	69	normal
20/9/24	11-15 AM	134	64	normal
20/9/24	8-05 PM	127	69	normal

Date: Wed 04/12/2024 11:16

To: VALE, Weaver (NHS CHESHIRE AND MERSEYSIDE ICB - 01F) <weaver.vale@nhs.net>

Hi,

Many thanks for your referral for this patient,

Unfortunately as per the reason for referral of nerve conduction studies as we are unable to order such investigations from physiotherapy.

I wonder whether this referral is more appropriate to be sent to the MSKCATS service, as I note no physio goals in the referral.

Many thanks
Katie Philbin
Physiotherapist

Area of Symptoms/ Reason for referral:

Nerve conduction studies

Date	Consultation Text
08-Nov-2024 10:02	Telephone consultation. (WEAVER VALE PRACTICE) TURNER, Amy (Dr)
History	See consultation with me 13th September. Secretaries have tried to obtain results of his nerve conduction studies but can't see that they have been done. Discussed with patient and agreed refer to get them done. Advised to get calcium and hba1c checked also.
Test Request	Blood Sciences - Unknown specimen Test Request : B12 & Folate - use FBC Plus for anaemia Test Request : Bone profile Test Request : Full blood count - FBC Test Request : HbA1c Test Request : Liver function test Test Request : Renal profile Test Request : Thyroid function test

13-Sep-2024 10:56	GP Surgery (WEAVER VALE PRACTICE) TURNER, Amy (Dr)
Problem	Numbness (New)
History	Toes on both feet numb for >2 years. No pain. No pins and needles. Says toes get jittery and stops him sleeping. Annoying sensation that he finds problematic. Has tried Amitriptyline in the past. Currently on Pregabalin. Recent surgery for primary hyperparathyroidism. Advised this should help but it hasn't. B12 and folate in 2024 normal. Last Hba1c 30 in 2022. See consultation with Dr Anto May 2024 - ? alcohol excess. Seen by neurology for the same in September 2022. Says has had nerve conduction studies but I am unable to find these results.
Comment	Chase nerve conduction studies. Review with results. ? For up to date adjusted calcium and hba1c.

Ref: SS/AG

Dear Dr Cottier

Re: Forename: Samuel Surname: ROBERTSON DOB: 02 May 1956
Address: 16 Companys Close Weston Runcorn WA7 4NA

Clinical diagnosis:

- Hyperparathyroidism with parathyroid surgery done in May 2024 (left upper parathyroidectomy, Mr Shafiq)
- History of low bone mineral density (T score -2.4 on bisphosphonate)
- Hypertension
- Hyperlipidaemia

I reviewed Mr Robertson in the presence of his wife. Mr Robertson reports doing well. He does not report any symptoms of hypercalcaemia. Adjusted calcium in November 2024 was normal at 2.35.
I have arranged to recheck his calcium (2.5), PTH (2.7) and along with U & E (normal). I believe this gentleman is on a bisphosphonate.

Kindly arrange for calcium levels to be monitored twice a year.

Blood pressure today was 172/74 mmHg. ***Kindly arrange for blood pressure monitoring.***

This gentleman would require a DEXA bone mineral density scan in a few years? time.
Mr Robertson is on cholecalciferol and oral Alendronic acid.

I have not arranged further follow up in this clinic. Please re-refer if needed.

Yours sincerely

dictated and checked by Dr Srinivas-Shankar

Dear Dr Johnson

Re: Mr Samuel Robertson Home Address: 16 Companys Close, Weston, Runcorn, Cheshire,
WA7 4NA

DOB: 02-May-1956

NHS No: 400 129 0375

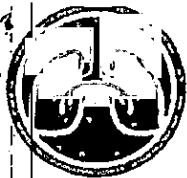

I recently saw Mr Robertson in the MSKCATS clinic due to numbness in both feet. A whole spine MRI scan did not show any neural compression in the lumbar region. Recent nerve conduction studies have confirmed a sensory and motor axonal polyneuropathy in the lower limbs.

I note that Mr Robertson does not have a diagnosis of diabetes. The patient has informed me that he drinks 12-15 pints each weekend, which may be contributing to the symptoms. I have discussed the results with Mr Robertson and he reports that he has been on pregabalin for some time, but does not think that these are adequately managing the symptoms.

I would be grateful if you could review Mr Robertson regarding the management of this peripheral neuropathy and to review his current neuropathic medication.

Mr Robertson has now been discharged from the care of MSKCATS.

Yours sincerely
Adrian Doyle
FCP/Trainee ACP

Dear Mr Robertson

Thank you for attending your Lung Cancer Screening appointment. We hope that you will find this beneficial to the health of your lungs.

Please find enclosed a copy of your GP report following your recent investigations.

Please note any findings directed to your GP are **not urgent** and do not require immediate attention. Please allow 6 weeks for you GP to contact you regarding any non-urgent findings.

Please be aware if you require a follow up LDCT scan, our CT Scanner may have moved out of your area for your follow up CT scan, so travelling maybe necessary. We aim to make your appointment as close to you as possible, but in some circumstances, you may need to travel. It is important for you to attend your scan. Please contact us on 0151-600-1756 if you will have trouble attending your scan for further information and help.

If you have any concerns or queries with your results letter please contact the team on 0151-254-3032

Yours sincerely,

23-Apr-2026

NHS Number: 400 129 0375

DOB: 02-May-1956

Dear Doctor,

RE: Lung Cancer Screening Follow Up

Your patient Mr Samuel Robertson attended a lung health check, here is a summary of their results.

CT Chest Scan Results

- Mild Aortic Valve Calcification - no action required.
- Mild Coronary artery calcification

Follow up CT Chest scan

A referral has been made by the Lung Screening Team for a 24 month follow up scan	Feb-2028
---	----------

Full report can be accessed from EMIS shared record. Copies of the report can be forwarded upon request.

If your patient is a current smoker, they will have been offered smoking cessation during their lung health check. In addition, all patients have been provided with the contact details for their local smoking cessation team.

Advice for Primary Care Team:

- Coronary Artery Calcification Advice - Patient reviewed/managed by Primary Care. In patients not eligible for the CVD prevention service i.e. those who are not new to LCS, are already prescribed lipid lowering medication or have established CVD the registered practice is advised to refer to <https://www.lhch.nhs.uk/lung-health-check> for management guidance regarding the finding of coronary artery calcification along with the appropriate Snomed coding to avoid inappropriate inclusion on CVD registers.

Yours Sincerely

LUNG CANCER SCREENING TEAM

Previous Addresses:

Dear Sir/Madam,

We act on behalf of the above-named individual and submit this request under Article 15 of the UK General Data Protection Regulation and the Data Protection Act 2018.
Scope of Request

We request a complete copy of the patient's full medical records, including all data held in electronic, paper, and archived formats.

This specifically includes:

Full GP records (not a summary printout)
Consultation notes and free-text entries
Historical paper records (including Lloyd George records where applicable)
Coded clinical data
Correspondence to and from hospitals, specialists, and external providers
Mental health records held within the GP file

4/12

Safeguarding concerns or alerts
Referral records and outcomes
Medication and prescription history
Any scanned documents or attachments

Format Requirement

We require a full record extract, not a patient summary or abbreviated report.

Where possible, please provide a complete system export including consultation notes and attachments.

Historical Records

Please ensure searches include:

Archived and legacy systems
Paper and scanned records
Records transferred from previous GP practices

Enclosures

We enclose:

Signed authority
Proof of identity

Should you require any further information to process this request, please advise promptly.

Statutory Timeframe

We expect a response within one calendar month. If an extension is required, please confirm with reasons in writing.

Non-Holding of Data

If you do not hold a complete record, please confirm:

The dates of records held
Details of any previous GP practices

Service of Documents

We only accept service of documents via email at evidence@mmalegal.co.uk. Should you for any reason be unable to send documents to the above email, please notify us via the same email imminently.

1. STATUS AND CONSTRUCTION

- 1.1. This Deed is executed as a deed and constitutes valid written authority for the purposes of:
 - 1.1.1. UK GDPR
 - 1.1.2. Data Protection Act 2018
 - 1.1.3. Common law confidentiality
 - 1.1.4. Any related statutory, regulatory or supervisory framework
- 1.2. This Deed shall be interpreted purposively and broadly to give full effect to the Client's intention that all personal data and Records relating to them be disclosed to the Representative, subject only to lawful statutory restriction.
- 1.3. This Deed is intended to provide clear and comprehensive authority for disclosure of the Client's personal data.

2. APPOINTMENT

MMA Legal Limited, a company registered in England and Wales (registered number: 13900519) is authorised and regulated by the Solicitors Regulation Authority. Access the SRA's rules at <http://www.sra.org.uk/solicitors/handbook/welcome.page>
SRA Number: 8000579

- 7/12
- 2.1. The Client appoints the Representative to act fully on their behalf in connection with:
 - 2.1.1. An application to Redress Scotland;
 - 2.1.2. Any review, reconsideration or appeal;
 - 2.1.3. Evidence gathering and submission;
 - 2.1.4. Any associated advisory, compensatory or restorative process.
 - 2.2. Requests made by the Representative shall be treated as made personally by the Client.

3. SCOPE OF AUTHORITY

- 3.1. This Authority applies to all public and private bodies including (without limitation):
 - 3.1.1. Local Authorities and Councils
 - 3.1.2. NHS Boards and GP Practices
 - 3.1.3. Health & Social Care Partnerships
 - 3.1.4. Integration Joint Boards
 - 3.1.5. Religious bodies and orders
 - 3.1.6. Residential and foster care providers
 - 3.1.7. Education authorities and schools
 - 3.1.8. Government departments
 - 3.1.9. Archive services
 - 3.1.10. Insurers holding historical liability files
 - 3.1.11. Successor, merged or restructured public bodies
- 3.2. The Authority applies whether Records are:
 - 3.2.1. Archived, microfiche, digitised or handwritten;
 - 3.2.2. Stored off-site by contractors;
 - 3.2.3. Held by dissolved or reconstituted institutions;
 - 3.2.4. Transferred following statutory reorganisation.
- 3.3. The Client requests that records not be withheld solely on administrative grounds such as archival storage or institutional restructuring including, for example:
 - 3.3.1. The institution has closed or restructured;
 - 3.3.2. Records are archived or require manual retrieval;
 - 3.3.3. Records are held by insurers or successor bodies;
 - 3.3.4. Retrieval involves time or administrative burden.

4. SPECIAL CATEGORY DATA – EXPLICIT CONSENT

- 4.1. For the purposes of Article 9 UK GDPR and Schedule 1 Data Protection Act 2018, the Client gives explicit consent to disclosure of all special category data including:
 - 4.1.1. Physical and mental health records
 - 4.1.2. Psychiatric and psychological reports
 - 4.1.3. Therapy and counselling notes
 - 4.1.4. CAMHS records
 - 4.1.5. Social work and safeguarding files
 - 4.1.6. Ethnicity or religious data where recorded
- This includes all NHS and private medical providers.

8/12

This explicit consent may be withdrawn at any time by written notice.

5. CRIMINAL OFFENCE DATA – EXPLICIT CONSENT

5.1. For the purposes of Article 10 UK GDPR and Schedule 1 Data Protection Act 2018, the Client gives explicit consent to disclosure of:

- 5.1.1. Criminal offence data
- 5.1.2. Police investigation material
- 5.1.3. Child protection investigations
- 5.1.4. Statements and intelligence logs
- 5.1.5. Outcome decisions

including records held by:

- 5.1.6. Police Scotland
- 5.1.7. Any predecessor Scottish police force
- 5.1.8. Prosecuting authorities.

6. THIRD-PARTY DATA AND REDACTION

- 6.1. The existence of third-party data shall not justify refusal to disclose the Client's personal data.
- 6.2. Where necessary, redaction shall be limited strictly to third-party information.
- 6.3. Mixed data shall be disclosed in redacted form rather than withheld in entirety.

7. PROPORTIONALITY AND REASONED DECISION-MAKING

- 7.1. Any refusal, limitation or redaction must:
 - 7.1.1. Identify the specific statutory exemption relied upon;
 - 7.1.2. Explain how that exemption applies to the particular Record;
 - 7.1.3. Confirm why partial disclosure is not possible;
 - 7.1.4. Be communicated in writing.
- 7.2. Blanket refusal without statutory justification may not satisfy statutory obligations under applicable data protection legislation.
- 7.3. Any reliance upon "disproportionate effort" must provide written reasoning demonstrating why staged disclosure or redaction is not feasible.

8. VALIDITY AND FORMAL REQUIREMENTS

- 8.1. This Deed remains valid for 24 months from execution unless withdrawn in writing.
- 8.2. Disclosure shall not be refused because:
 - 8.2.1. An internal template form has not been used;
 - 8.2.2. The Authority is considered "out of date" within internal policy;
 - 8.2.3. Additional consent is sought beyond reasonable identity verification.
- 8.3. Any organisation acting in good faith reliance upon this Deed shall be fully discharged in making disclosure.

9. REGULATORY AND STATUTORY RIGHTS

9112

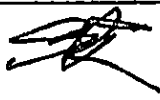

In the event of non-compliance, refusal, or unreasonable delay in responding to a lawful request made under this Deed, the Client and/or the Representative reserve the right to pursue any statutory or regulatory remedies available under applicable law.

This may include raising concerns with the relevant supervisory authority or regulator where appropriate.

Nothing in this Deed limits the Client's rights under the UK GDPR, the Data Protection Act 2018, or any other applicable statutory framework.

Withdrawal shall not invalidate disclosures already made in reliance upon this Deed.

BIRMINGHAM 29

Dear Dr Phillips

Samuel robertson, dob 2 5 56
45a Bushwood Road, Selly Oak

Admitted: 11 3 85 Discharged: 14 3 85

Diagnosis: Haematemesis secondary to small Mallory Weiss tear

He was admitted with a story of having vomited an egg cup full of dark blood 3 hours prior to coming to the hospital. On DQ, he had no similar previous episodes, although had been told that he had a stomach ulcer following a barium meal performed 10 years ago when he lived in Glasgow. He has since this time, suffered from no indigestion, although has occasional episodes of burning epigastric pain over the last 2 months. He admitted to drinking heavily over the past few days because of problems at home. He said that he had had only 3 to 4 pints on the night of admission, which had been followed by marked vomiting.

Past medical history is otherwise unremarkable. He lives with his common law wife and their 2 children aged 2 and 6 months. The younger child apparently was anoxic at birth and it's parents have been told that it may have mental impairment. It was this worry that led to his drinking. He has been unemployed for several years and smokes half a ounce of tobacco a day.

Drugs on admission, Zantac 150 mg bd for 6 weeks prior to admission and Diazepam.

Systemic enquiry was largely unremarkable apart from a complaint of numbness and paraesthesiae over the left arm and left calf for the last 6 weeks. There was no associated loss of movement and no loss of power.

On examination, he looked well and there was no clinical evidence of anaemia. His chest was clear. Pulse 80 regular, BP 140/85, heart sounds normal and there was no evidence of oedema. CNS revealed no evidence of focal neurological deficit although there was a suggestion that his right disc may be a little pale.

He was admitted for observation. Initial blood tests revealed a Hb of 17.4 with a WCC of 8.2 and a normal electrolytes. He was treated with IV Ranitidine and underwent endoscopy. This confirmed a small mallory weiss tear, which was presumed to be the result of his profuse vomiting following his drinking session. He had no further episodes of drinking while on the ward, and was reassured that no treatment was necessary.

cont'd.....

Dear Dr. Sen-Gupta,

re: Mr. Samuel ROBERTSON dob 2.5.56
975 Warwick Road, Acocks Green, B27

I saw this man with his wife in clinic on the 5th November, 1987. His headache is rather different and has been troubling him on the right side for 30 minutes at a time on and off during the day - there are no accompaniments and there are no other significant features.

On examination he is perfectly fit with no abnormal signs.

I was able to reassure him that there is nothing seriously amiss. I would give him nothing more than simple analgesics.

Best wishes,

Yours sincerely,

Dr. Milne Anderson

5 March 1986

Dear Dr Sen-Gupta

re: Samuel Robertson

975 Warwick Road Acocks Green Birmingham 27

I saw this 30 year old Unemployed Labourer with headache and chest pain in the clinic today.

For the past year he has been experiencing hemicranial throbbing headaches roughly two to three times a day. However, they only last a few seconds and are unassociated with any neurological deficit.

He has also had left sided chest pain radiating to the left arm lasting a few minutes and only occurring at rest. He is in normal sinus rhythm and is normotensive. His chest was clear. There was some tenderness on extreme of movement of the left shoulder.

Investigations from last week by Dr Waite were as follows; full blood count, profile, ECG, chest X-ray and cervical spine all normal. ✓

It seems his wife has been reading a medical encyclopaedia and they have been both worried that he suffers from angina. I reassured him that this was not the case and discharged him from the clinic.

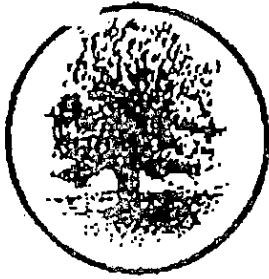

Yours sincerely

Julian Fearnley

Dear Dr Webster

SAMUEL ROBERTSON - DOB 02.05.56
18 MATLOCK ROAD B11 3JB

Thank you for asking me to see this man with chest pains going to his left arm and occasionally his right arm. As you know, he has already had an MRI scan which was normal that has obviously excluded anything serious. His electrical tests are a bit difficult to interpret but I suspect either mean very little or a bit of nerve entrapment. Either way, I do not think there is anything to worry about or that there is anything we should be doing. My suspicion is that most of it is just muscular tension and strong reassurance will probably help a great deal.

Yours sincerely

Woodlands, Royal Orthopaedic Hospital
Birmingham
B31 2AP

Dear Mr Blenkin

Re: Samuel Robertson, 02/05/1956
18 Matlock Road, Tyseley, Birmingham, B11

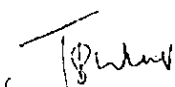

Diagnosis: ? Cervical spondylitis

Thank you for your letter about this 38 year old Glaswegian. According to his wife he first developed symptoms in his right arm about 8 months ago. He described tingling affecting his index and middle finger which was treated by his general practitioner with a cortisone injection. This improved his symptoms, but they recurred a few weeks later. The symptoms then spread to the little and ring finger of the right hand and then radiated up to the shoulder. He does apparently wake up at night with some numbness in his hand, but this does not sound typical of a carpal tunnel syndrome. There is a long history of left sided chest pain and left upper limb pain which has been investigated and thought to be unrelated to cardiac disease. He has a sister with multiple sclerosis, but no other neurological family history.

On examination I could find no abnormal signs. In particular, there was no wasting in median nerve distribution. Sensory examination appeared to be normal.

I suspect these symptoms are arising as a result of cervical root irritation from his neck. Unfortunately I did not have copies of any of his electrophysiology, and I will therefore obtain these together with his cervical spine x-rays. I think it is unlikely that there is anything to be done from the surgical point of view. I will see him again in 3 months with the results.

Yours sincerely,

John Winer

NOTES

TREATMENT AND NEXT ATTENDANCE

17.6.93

This patient was seen yesterday at the General Hospital clinic. Referred by his GP with a 6 month history of paraesthesia right ulnar nerve distribution, possibly due to entrapment at the right elbow or at the thoracic outlet.

Cervical spine x-rays showed, in addition to a rather long transverse process of C7, an abnormality at C5/6 disc, no history of trauma was given. Plain cervical spine x-rays were reported at the General Hospital to show some degenerative change. X-rays were shown to Mr Stirling, who saw no evidence of any instability on flexion/extension/lateral views.

On review today he was asymptomatic. He has full range of movements, and neurological examination for both upper and lower limbs was normal.

Plan - to have an MRI of his cervical spine to look into the abnormality of C5/6 disc and thoracic outlet. EMG's were requested from the General Hospital. See as planned at the General Hospital clinic.

For MRI scan of cervical spine.

To be seen in GHB clinic as previously arranged.

Copy of note sent to Sec at GHB to go into pt's GHB notes.

MMM/AKM (tape)

X-ray Report.

CERVICAL SPINE:- Routine study with axial T2W images extending from C4 to T1 level. Today's study suggests the most minimal signal loss in relation to the intervertebral disc at C5/6 level. There is no feature to suggest any significant posterior or postero-lateral disc prolapse at any cervical level. Cervical cord appears unremarkable with normal signal and no evidence of focal expansion. Cranio-vertebral junction appears unremarkable and the 4th ventricle is of normal size. Today's study fails to demonstrate any feature to suggest significant foraminal compromise at any cervical level. The axial images demonstrate rather prominent transverse processes at C7 level but I can not identify any feature to suggest an associated fibrous cervical rib.

(N Evans) 26.7.93

29.7.93

NOT SEEN.

MRI scan noted.

16.6.93
MM/FR

37 year old right handed unemployed gentleman referred by GP. Seen with Mr Mulligan. About 10 months ago started having numbness and tingling affecting the right index and middle fingers that came up with manual activities but never at rest nor did it wake him from sleep.

GP injected his carpo-tunnel with Depo-Medrone last October following that he had relief of his symptoms, but 2 months following the injection, he developed numbness and tingling affecting the right little and ring fingers.

Again, symptoms came up with heavy activities such as cutting the hedges or lifting his handicapped son.

Never had symptoms at rest.

He tells me that he gets neck ache now and then and recently he had it x-rayed by his GP.

On examination, he looked well. Examination of his upper limbs showed tattooed forearms. He has no accessory deficit muscle wasting or restriction of movements of his hand and wrist. He had a strong APB and a negative Froman sign. He has full range of elbow and shoulder movements, but Tenel's was positive, over the ulna groove, and also over the medial aspect of his upper arms. Examination of his neck showed full range of movement. No tender spots and Addison's test was negative.

Cervical x-rays requested by GP last May showed some degenerative change and a slight deformity at C5/6 space (he gave no history of previous neck injury.) More importantly the cervical spine x-ray showed a longish transverse spine of C7 on either side. Flexion/extension views show slight opening, but no obvious instability. X-ray of his right hand was normal, and x-ray of the right elbow showed irregularity at the ulna nerve groove.

Impression:

This man now has possible entrapment of the ulna nerve at the thoracic outlet or alternatively at the elbow level.

Plan:

1. To have the cervical x-rays extension/flexion views reported today at the X-ray Dept.

2. Patient to be seen at the OP Clinic at the Woodlands regarding report of the x-ray.

Dear Dr. Webster,

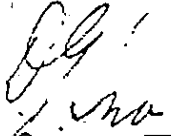

Re: Samuel Robertson, (Born 2.5.56.),
18 Mattock Road, Tyseley

This gentleman complains of intermittent ear ache. He has no other otological symptoms.

Examination of his ears, nose and throat reveals no abnormality whatsoever. He was unable to wait for formal audiological testing of his hearing today. He feels that it is normal.

I suspect that he has intermittent eustachian tube dysfunction and there is very little active that ought to be done about this. I have reassured him on this point and he is happy to accept this advice.

Yours sincerely,

D. G. Snow, FRCS,
Registrar to Mr. Reid.

Dear Dr Newey

SAMUEL JOSEPH ROBERTSON - d/o/b 02.05.1956
28 Martin Close, Palacefields, Runcorn, Cheshire, WA7 2RB

Thank you very much for your nice letter about this gentleman.

He suffered what was obviously a quite nasty fracture of his left elbow about six years ago which was treated by K-wires in Birmingham. I suspect they had some difficulty even then because he told me that he is extremely reluctant to have a general anaesthetic and did not want anything done even at the time, so I suspect they were rather limited in their options.

Overall he has had a reasonable result. He has good range of motion in his elbow with little in the way of pain but it does click and grind.

You kindly arranged for him to have some radiographs and it does show some loose material in his elbow joint.

He quite specifically stated to me that he does not want anything done at this time and I am quite happy to leave it on that basis. If it deteriorates, he will let me know and I will see him again as necessary.

Kind regards.

Yours sincerely

A. S. Gnanan

Doctor, we have been informed that your patient has claimed benefit due to incapacity and we now have to assess their capacity to perform work not just their own job, using the Personal Capability Assessment procedures. People with certain medical conditions can be accepted as meeting the threshold of incapacity for benefit without undergoing the Personal Capability Assessment or, if the assessment has to be without undergoing a medical examination.

The information you have provided on a medical statement (for example form Med 3), or other information otherwise available to the medical officer, it appears that this may be such a case. In order for the Benefits Agency decision maker in accordance with the law, the medical officer requires factual information. We would be obliged if you would answer the medical officer's questions clearly indicating on a separate sheet, any medical evidence that you think would be harmful to your patient's health. An example of what may be harmful information is a diagnosis that is not to your patient such as malignancy, progressive neurological conditions or major mental illness.

Your patient has given written consent on their claim form to allow us to approach you for this information.

We have agreed to treat this patient under the NHS (General Medical Services) Regulations 1992 as amended March 1998 and equivalent regulations in Scotland, and have issued, or refused to issue, a certificate to them, you are obliged by your terms of service to supply clinical information to a medical officer. A similar obligation applies to most hospital and community doctors working within the NHS. You are not obliged to do this if you have not agreed to treat the patient under the NHS but any information you are willing to provide will be much appreciated. Unfortunately, we will be unable to proceed without it.

Within 7 days will be appreciated and a business reply envelope is enclosed for your use. If you have any queries about this form please contact the medical officer at your local Medical Services Centre, see leaflet IB204 Guide for Registered Medical Practitioners.

Yours faithfully
Sincerely

Chief of the Manager
the Medical Officer

About your patient - continued

Your reply to the Medical Services doctor

Please answer the following questions from the information which is currently available to you.

1. Date patient was last seen or examined for the condition(s) causing incapacity:

24/4/01

Diagnosis of all relevant conditions and date(s) of onset:

Severe osteoarthritis left elbow 11/1/01

Anxiety / depression ~~11/1/01~~ 10/00

3. Factual details of patient's condition:

Where possible, please include brief factual details of:

- present medical condition
- medication and other treatments (eg attendance at day care centre, hospital outpatient)
- outlook for your patient and any proposals for future management.

① elbow 1995

- painful stiff ① elbow = audible
crepitus on movement

Xrays show marked degenerative changes
with numerous ossified loose bodies
Has been referred to Orthopaedic Clinic
(appr 14/6)

2. (severely disabled son with cerebral palsy)
died suddenly October 2000

- had been virtually full time job for
Mr & Mrs Robertson & work after
him

- both devastated by loss - Mrs
Robertson severely depressed and
very dependant on her husband
- he is still anxious and not sleeping

About your patient – continued

- 4 Where available to you, please give brief details of what the patient has been told about the likely clinical course of their condition(s), and any future treatment.

Orthopaedic (injection may recommend surgery to elbow ? joint replacement

5 Any other information.

- If you have evidence which indicates that, as a result of their medical condition, your patient would not be able to attend an examination by using public transport or by taxi please include this here.
- Any additional information about the effects of the medical conditions on daily living (self care, indoor mobility, judgement and compliance with medication) would be very helpful.

Only complete the section below if you have diagnosed a psychiatric condition at question 2.

- 6 Where available to you, please give brief details of any history of recent or serious attempts at suicide or other self injury, or any history of threatening or violent behaviour towards others.

Declaration

I understand

that if this person appeals, or asks for an explanation or reconsideration of the decision made by the Benefits Agency, a copy of the information I have given here may be sent to the person, their legal representative and the Appeals Service

I also understand

that the only information that can be withheld is medical evidence that would be harmful to the person's health. I have stated any medical evidence that I think may be harmful to the person's health on a separate sheet of paper.

Mr P Sherry
Consultant Orthopaedic Surgeon
Halton General Hospital
RUNCORN

Dear Mr Sherry

Re: Samuel ROBERTSON -dob: 02 05 56 - NHS No 400 129 0375
28 Martin Close Palacefields Runcorn WA7 2RB Tel 778537

This patient had a supracondylar fracture of his left humerus in 1995 and was treated at the Birmingham Heartlands Hospital where he had an open reduction and internal fixation with three K-wires. Some weeks later he had the K-wires removed under a local anaesthetic. At a further review later that year, it was mentioned that he had 10 degrees of fixed flexion deformity in the left elbow which may or may not improve with time. However, he was then discharged from further follow up. Later he lived in Manchester and more recently he moved to Runcorn. He came to see me in surgery two weeks ago to say that he is still bothered by a painful stiff left elbow with easily audible noises on movement.

On examination there was obvious crepitus in the left elbow with restricted movements and x-ray of his left elbow has been reported as showing marked degenerative changes with numerous ossified loose bodies.

I discussed the findings with Mr Robertson today, he is very reluctant to have any further major surgery to his elbow but I have advised him that he should see an Orthopaedic Surgeon to discuss the various treatments that might be possible. I should mention that he is also on treatment for hypertension and hyperlipidaemia and currently takes Bendrofluazide 2.5mg od, Verapamil 240mg MR 1 od, Simvastatin 10mg nocte and Gaviscon prn. His son with severe cerebral palsy died suddenly just last October and he is still suffering from the after effects of this sad loss.

With best wishes.

Yours sincerely

Dr James A Newey

Dear Dr Chouksey,

RE: Samuel ROBERTSON DOB 02.05.56
1 RUBY STREET, HULME, MANCHESTER

Mr Robertson has no more problems with his right leg, he feels fine.

On examination again his lower limbs and thoraco lumbar spine did not reveal any abnormality.

I have now discharged him from this clinic to your care, with the advise to take up swimming as a regular exercise.

Yours sincerely

Dear Dr Chouksey

re: Samuel ROBERTSON dob: 2.5.56
1 Ruby Street, Hulme, Manchester.

I saw your patient on the 10th February in Dr Keenan's Clinic. Thank you for your letter.

He complains of pain in the back of his right leg radiating up to the back of the knee which he has had for 2-3 months. The first time he noticed this pain was in bed after a days shopping. There is no history of injury. He denied of having any cramps in the leg and also had no back pain. He has no problem with bowels or bladder.

His mother suffers from rheumatoid arthritis and also had CABG. His sister had DVT.

Clinical examination of the spine and lower limbs revealed no abnormality.

I think Mr Robertson is quite anxious with his pain. As there is a family history of rheumatoid arthritis and DVT, I am doing some routine blood tests. I have strongly reassured him that he has no rheumatoid arthritis or DVT. I will see him again in about six weeks time with the blood reports.

Yours sincerely

Dear Dr Chouksey

Samuel ROBERTSON DOB: 2/5/56

1 Ruby Street Hulme

Thankyou very much for referring this gentleman who noticed a lump in the right anterior aspect of his chest wall two months ago. He tells me this is increasing in size and is non tender. There is no family history of breast disease.

On examination today he has an epidermoid cyst in the parasternal region just adjacent to the right upper inner quadrant of the right breast. Clinically this is nothing sinister and I have listed him for excision of this cyst under local anaesthetic in our Minor Operations Unit.

Yours sincerely

FRACTURE CLINIC NOTE
2nd August 1995 Seen by Mr. Saidaiah

I reviewed this patient in my clinic again today. He has 10 degrees fixed flexion deformity in the left elbow which may or may not improve in due course because of the nature of the fracture which involved the elbow joint.

I have explained to the patient, the chronic nature of the problem. However on examination he has got very good functional movements in the elbow and he is pleased with the results.

I have discharged him from further follow up.

Yours sincerely
