Medical History

22/06/2026 Notes summary on computer notes are in storage Dr Darran Hill

19/06/2026 Telephone encounter Voicemail left - advised I will ring back later this afternoon. If pt rings back, inform I have spoke with stroke consultant. He agrees to start on a new medication called Clopidogrel. I have printed this script and will email it to Well's pharmacy. Stroke team will contact him in the near future for review Dr Nik Samal

19/06/2026 Consultation F2FPlanned follow up.Ongoing Right sided symptoms of intermittent numbness, and feeling foot dragging. Continues to have full power and normal gait on examination.HS I+II+0, HR 57 regular. BP 179/95.CHAD2VASC2 score = 3HASBLED score = 1PlanDiscuss with stroke/TIA re management as per RefHelp- will likely need DAPT. ?CT head.HBPM readingsUpdateDiscussed with Dr Doubal (stroke) - agree4s commence Clopidogrel. Refer to him, and will consider scan or seeing in clinic. Dr Nik Samal

09/06/2026 SMS text message sent to patient please contact the surgery and quote the word workflow

08/06/2026 Administration urine dip normal Dr Rosie Falconer

03/06/2026 Consultation F2FIntermittent Right sided limb pains.Ongoing for a few months. Difficult to describe the pain, but pt thinks sharp. Not exacerbated by anything in particular. No neck or back pains or injury.No weakness, no numbness, or tingling. Feels shakiness when grips something tight.Pt states had episode ~December 25 where he had an episode where he had facial drooping for a few hours, then resolved. Did not see a doctor about this at the time, or since.ExaminationFull power and sensation in all limbs.No rigidity. No coordination problem.Normal vision.ImpUnilateral limb pains intermittent ?central neuro cause.Likely previous TIAPlanDiscuss with supervising GP ?neuro investigationsPt will; need TIA work up Dr Nik Samal

25/05/2026 SMS text message sent to patient *NO REPLY* We have made you an appointment for 03/06/2026 at 14:20 with Dr Samal. If this appointment is not suitable for you please let us know on 0131 552 7676 Kind Regards Bangholm Medical Centre. .Do not reply to sms

13/05/2026 SMS text message sent to patient NO REPLY Please ignore the previous text message sent as this was an error. If you have any upcoming appointments this will still go ahead. We have reduce staff in reception today, so please avoid phoning unless it is urgent for today. Thank you for your understanding. Kind Regards, Bangholm Medical Centre {Patient Group Over16sms}

16/03/2026 SMS text message sent to patient *NO REPLY* Due to staff sickness, we have reduced clinical staff today and we kindly ask that you only ask for an urgent call back from a clinician if you feel your matter is urgent. Please remember you can go to your local Pharmacy for Pharmacy First Service where they can treat minor ailments: Minor infections, Sore throats, Earache, Impetigo, Insect bites, UTIs in some women, Minor skin conditions, Medication advice. Thank you for your understanding. Kind Regards Bangholm Medical Centre {Patient Group Over16sms}

11/03/2026 SMS text message sent to patient *NO REPLY* This afternoon we are closed for staff training from 1pm. Our phone lines will still be available but please only phone if it is urgent. Our doors will be closed for non emergencies. Kind Regards Bangholm Medical Centre {Patient Group Over16sms}

06/03/2026 SMS text message sent to patient *NO REPLY* We are currently experiencing a high volume of calls into the practice recently. Please can we make you aware that you can request your repeat prescription by our email address which is prescription.s70272@nhs.scot or by your online services account or via your preferred pharmacy. Once your request has been made it will take us 3 full working days for us to action, then allow the pharmacy a further 2 days for them to action. Please check your pharmacy first if your prescription is ready rather than phoning the practice. Finally we do not take prescription requests over the phone. Thank you for your understanding and cooperation. Kind Regards Bangholm Medical Centre {Patient Group Over16sms}

03/02/2026 SMS text message sent to patient *NO REPLY* We have changed you to a serial prescription for most of your regular repeat medication. This means we have issued a yearlong prescription to your pharmacy therefore you don't need to request your repeat prescription going forward and you will be able to collect your medication every 2 months at your preferred pharmacy if you have any questions please contact your preferred pharmacy who will advise. Kind Regards Bangholm Medical Centre. .Do not reply to sms Ms Laura Tully

03/02/2026 On repeat dispensing system -Request to start Serial Rx. Has attended for review of bloods 28/01. BP was 140/80 on 19/12. Prescribed salbutamol but no preventer. has been referred for spirometry- salbutamol not added to serial rx. Ms Laura Tully

28/01/2026 Consultation Attends for bloodsBloods taken as per ICEResults in 1/52. Ms Claire Gall

19/12/2025 Consultation F2F seen alone. 'Follow up on multiple issues':- C/O SOB on exertion, e.g. running. Uses inhaler daily. Noticed symptoms more when not using inhaler.- PMH: HTN (diagnosed 2007), IBS, acid reflux. Bowel screening up to date.- DH: Amlodipine, Buscopan PRN for IBS, blue inhaler. No current statin.- SH: Gave up job due to health issues. Applied for Adult Disability Payment. Plan: 1. SOB. ?Asthma. X-ray normal. Plan for spirometry. Continue inhaler. Issued 2x blue inhalers. 2. IBS. Stool test for H. pylori normal. Happy with current Buscopan PRN. No changes. 3. Cardiovascular risk. assign score 17%. Discussed statin therapy. Agreed to start Atorvastatin 40mg OD. Issued 2/12 supply. Advised can take AM or PM. Bloods for LFTs, U&Es, and lipids at end of January. F/U to review results. 4. Adult Disability Payment. Happy to complete forms if contacted. Advised to call if any issues with new medication. DH Dr Darran Hill

03/12/2025 SMS text message sent to patient This afternoon we have limited staff in reception due to staff training, please only phone if it is something urgent, that cannot wait until tomorrow morning at 8am. Kind Regards Bangholm Medical Centre {Patient Group Over 16sms}

02/12/2025 SMS text message sent to patient *NO REPLY* We have made you an appointment for 19th December at 0945 with Dr Hill. if this appointment is not suitable for you please let us know on 0131 552 7676 Kind Regards Bangholm Medical Centre. Do not reply to sms

02/12/2025 SMS text message sent to patient Please be aware of our new closure times for staff training. We will be closed every Thursday, starting from this week onwards and we will be closed between 12:30pm-1:00pm. Kind Regards Bangholm Medical Centre {Patient Group Over 16sms}

30/11/2025 SMS text message sent to patient no reply message- dear just to say I calculated your cardiovascular risk score after your blood test and it remained at a HIGHER risk. It would be good to continue pursuing a healthy diet and regular exercise but also book an appointment to exploring whether to take a medication to help reduce your risk further. For further information on maintaining good cardio health please feel free to explore the link <https://www.bangholmmedicalcentre.scot.nhs.uk/heart-health> kind regards Dr Hill, Bangholm Medical Centre Dr Darran Hill

25/11/2025 SMS text message sent to patient We are currently experiencing a high volume of calls regarding sore throats and cough/cold symptoms. Some local pharmacies can offer antibiotics for chest infections, and NHS Inform has some great advice too. Please check with your local Pharmacy first before contacting the surgery, as they may be able to help you in the first instance. Thank you for your cooperation. Kind Regards Bangholm Medical Centre {Patient Group Over 16sms}

06/11/2025 SMS text message sent to patient no reply message- left a stool sample to collect at the practice in an envelope with your name on it. thank dr Hill, Bangholm Medical Centre Dr Darran Hill

06/11/2025 SMS text message sent to patient *NO REPLY* Please could you call 0131 537 2054 to arrange an x-ray at the western general hospital. Many thanks. Bangholm Medical centre. Do not reply to sms Dr Darran Hill

05/11/2025 Consultation F2F seen alone. Patient presents with worsening hernia and breathlessness on exertion. History:- GI sx worsening ventral hernia, now larger. some intermittent loose stools abdo cramps no sign of red flags on buscopan prev investigated stool test cscreening up to date- SOB mild cough breathlessness on exertion, e.g., cutting grass. Previously used Ventolin inhaler for breathing using wife's inhaler - PMH: IBS, acid reflux.- SH: Ex-smoker, quit 15 years ago. Smoked from age 15 to 45 (30 pack-years, ~10/day). Works as a taxi driver for 10 years. No known asbestos exposure. Weight ~99 kg. Examination:- BP: 140/80.- Chest: Heart sounds normal on auscultation. Lungs clear to auscultation. sat 97% r16 Impression: 1. Ventral hernia likely varification of recti 2. Breathlessness on exertion. ? COPD emergence Plan:- Investigations: Blood test (MOT + PSA), CXR, stool test.- Treatment: Trial of Ventolin inhaler for breathlessness.- Advised to stop omeprazole for 10 days before stool test.- Follow-up to discuss results and further management. Discussed possibility of endoscopy if stool test/bloods are abnormal.- Safety netting: Reassured that bowel symptoms are likely functional but will explore again given risk factors Dr Darran Hill

24/04/2025 SMS text message sent to patient Hi William, It looks like your regular blood test is overdue, so please make a routine blood test appointment in the next month or two please. Thanks, Dr Steve Allan Dr Steve Allan

25/03/2025 SMS text message sent to patient NO REPLY Following our text sent this morning, we would like to clarify that if you have NOT received a message with a change to your appointment, YOUR APPOINTMENT WILL STILL GO AHEAD. Unfortunately, we have received many calls querying this which ultimately increases our workload. As stated in our previous text, we are short-staffed this week due to illness, so any NEW appointments requested for routine issues will experience a wait for an appointment. We are still able to deal with URGENT requests only. Kind Regards, Bangholm {Patient Group Over 16sms}

25/03/2025 SMS text message sent to patient NO REPLY Unfortunately due to some illness amongst our clinicians, we have a reduced routine appointment availability over the next few days. Please accept our apologies for this. We are still able to accommodate URGENT issues, however, if your issue is not urgent, please consider calling us next week. As a reminder- you do NOT need to call us at 8:00 on ANY day. We accept urgent calls throughout the day, however we do ask that any requests for home visits are called in before 11:00. Thank you for your understanding. Kind Regards, Bangholm {Patient Group Over 16sms}

18/03/2025 SMS text message sent to patient IMPORTANT MESSAGE- PHASING OUT EMAIL ORDERING Unfortunately, due to increasing numbers of patients calling us regarding prescriptions and non-urgent medication, we have taken the decision to replace our email ordering system with our online ordering platform. Using our online ordering system allows patients to track the progress of their prescription and be informed when this has been actioned. This will reduce valuable time currently being taken to deal with prescription queries on the phone and will help us to reduce our call wait times, allowing us to provide a more efficient service for all of our patients. All prescription requests have a THREE business day turnaround time. Your pharmacy may have an additional wait time which is outwith our control, so please ensure you are ordering in enough time. Going forward, prescriptions can be ordered in the following ways: Online Ordering System- SIGN UP HERE www.bangholmmedicalcentre.scot.nhs.uk/appointment-reminders-and-online-ordering Directly via your local pharmacy Thank you for your understanding and helping us continue to provide an efficient, patient-friendly service. Bangholm Medical Centre {Patient Group Over 16sms}

Other Biochemistry tests

15/12/2020 Coeliac disease screen = 1.1 U/mL U/mL - Coeliac testing

NOTES:1. If patient is on gluten free diet, negative serology does NOT exclude coeliac disease. For details of required gluten intake to ensure an adequate 'gluten challenge' see RefHelp.2. Positive serology (tTG-IgA >5U/ml or tTG-IgG >10U/ml) is associated with Coeliac Disease but is NOT diagnostic on its own and for all adult patients endo-scopic biopsy is required. As such, where serology is positive at any level, please refer to GI and advise NOT to exclude gluten until diagnosis is confirmed or excluded by a Gastroenterologist.3. Low level positives (tTG-IgA 5 to 10 U/ml) may be false positives and are relatively common.4. See GI and Paediatric GI pages on RefHelp for further information and advice.

CLINICAL INFORMATION**History of presenting complaint / examination findings / investigation results****Presenting complaint**

Description: Nasal polyps

Comment: I would be most grateful for your re-assessment of this gentleman who was started on Flixonasules and Prednisolone 5mg daily in September 2007. His symptoms are well controlled and his Prednisolone has been reduced to 2.5mg. He has high blood pressure not well controlled at present.

It appears that he may have been lost to follow up and I would be grateful if he could be reviewed at your clinic.

Yours sincerely

Reason for referral

Care type requested: Out Patient - New

Dear Dr Ostrowski,

A COPY OF THE FOLLOWING LETTER HAS BEEN SENT TO YOUR PATIENT:

Patient: O'Donnell, William **DOB:** 28/10/1965
Address: 25 Boswall Crescent, Edinburgh, Midlothian, EH5 2ER

Dear Mr-O'Donnell

Notification of Removal From the Ear Nose and Throat Outpatient Waiting List

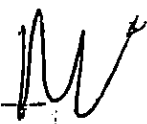

According to our records you have failed to attend for your appointment as detailed below:

Specialty: Ear Nose and Throat

In view of our waiting list, we are not routinely arranging second appointments and we have therefore removed your name from our waiting list.

We have copied this letter to your GP. If you still need treatment please get in touch with your GP who will contact us again if necessary.

Dear Mr O'Donnell

MEDICATION REVIEW & CHANGES TO YOUR REPEAT PRESCRIPTION

From time to time we review the medicine we prescribe to make sure that they are appropriate, safe and best value for money for the NHS.

On reviewing your medicines recently I noticed that you are prescribed:

Candesartan 32 mgs.

This is expensive and is no better than **Lisinopril 20 mgs.** All GPs in Lothian are encouraged to prescribe Lisinopril.

I have changed your repeat medicine to **Lisinopril 20 mgs** instead of **Candesartan 32 mgs.** You will see this change when you next request a repeat prescription. Please continue to use your current supply of Candesartan 32 mgs until it is finished. Please see me, one morning, 2-3 weeks after you have started your Lisinopril 20 mgs for a repeat blood pressure and blood test.

If you have any problems with this alteration then please let us know.

We very much appreciate your support and co-operation with this change.

Yours sincerely

Dr Nigel M J Ostrowski

Dear Dr Ostrowski,

~~Address: 25 Boswall Crescent, Edinburgh, Midlothian, EH5 2ER~~

Patient: O'Donnell, William DOB: 28/10/1965
Address: 25 Boswall Crescent, Edinburgh, Midlothian, EH5 2ER

Dear Mr O'Donnell

Notification of Removal From the Physiotherapy - MSK Outpatient Waiting List

It is very important that you read this letter.
You have been referred to the speciality details below:

Specialty: Physiotherapy - MSK

As we want to give you more choice about the date and time of your appointment we now ask patients to call the office to agree a convenient date and time.

We originally contacted you 2 weeks ago asking you to call the appointments office to arrange your appointment. We then sent you a reminder 1 week ago. As we have not heard from you we assume that you no longer require an outpatient appointment and have removed your name from the waiting list.

We have sent a copy of this letter to your GP. If you still need an appointment, please get in touch with your GP who will contact us again if necessary.

Bowel Screening
Helpline Number: 0800 0121 833

Dear Doctor,

Your patient **2810651094**, **WILLIAM O'DONNELL**, **25 BOSWALL CRES**, **EDINBURGH**, , , **EH5 2ER** was invited to participate in the Bowel Screening Programme on **28/10/2015**

It is 3 months since your patient was sent a bowel screening invitation and bowel screening test kit. As of today's date your patient has not participated. At 6 months your patient will return to recall and be invited again in two years time.

Anything your GP Practice can offer to help your patient's awareness and understanding of the benefits and risks of the Bowel Screening Programme would be appreciated - this will help them to reach an informed decision regarding participation.

If your patient no longer has their screening kit, it is possible to request another by calling the Scottish Bowel Screening Helpline on 0800 0121 833

Yours sincerely

A handwritten signature in black ink, appearing to read "W.C. Steele".

CLINICAL INFORMATION

Reason for Referral:	Excessive belching and retrosternal discomfort/early dysphagia.
Main Referral Text:	For the past 3 months Mr O'Donnell has had a sudden occurrence of belching. He does not drink caffeinated drinks nor alcohol to excess. He complains about some retrosternal discomfort at times with a sense that something is stuck outwith the times that he is eating. He does not have any red flag symptoms and examining him in his abdomen/supraclavicular region reveal no obvious abnormality. A trial of Peptac made no difference whatsoever and he has stopped any fizzy drinks. Given the problem is worsening I have started him on Ranitidine, but as this has occurred for the first time out of the blue and seems to be worsening I would be grateful if you would consider upper GI endoscopy if you agreed.
Many thanks indeed.

Dear Dr Allan

Further to the endoscopy carried out recently on the above patient, I can confirm that the Clo/Urease test result is POSITIVE. Please refer to the advice already given on the gastroscopy report.

Yours sincerely

Hospital: GP-Direct to Test

Referring Cons: GP (Direct Referral)

Indications

Dysphagia, reflux symptoms and excess belching.

Consultant/Endoscopist

Endoscopist No1: Karen Church
Nurses: Anna Boddie
Veronica Shahzad

Report

The procedure was completed successfully.
Apparent mucosal junction at 48cm from the incisors.
STOMACH. Gastritis: severe raised erosive with no bleeding within (b).
There were no peri-operative complications.

Instrument

LTH 26 EG580NW2 1G390K087 TNE

Diagnosis

OESOPHAGUS. Normal.
STOMACH. Gastritis.
DUODENUM. Normal.

Premedication

Lidocaine 5%/Phenylephrine 0.5% 1ml nasal spray
Xylocaine (Spray) 40 mg

Follow up

Return to the referring GP.

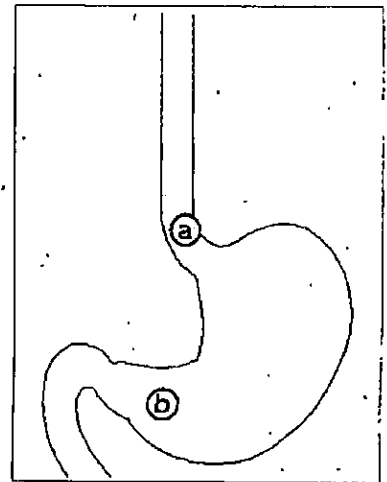

Advice/comments

TNE right nostril.

HP eradication therapy is recommended if CLO test positive.

CLINICAL INFORMATION

Reason for Referral: Ongoing dyspepsia and excess gas.

Main Referral Text: Mr O'Donnell is 54 and has been seen by your department 2 years ago. He had a gastroscopy at that point which revealed gastritis. Subsequent to this we have had great trouble getting on top of his symptoms. He describes ongoing dyspepsia, specifically when he bends over or compresses his abdomen. He no longer smokes, but vapes. He drinks only 6 cans of alcohol over the course of a week and his weight has been steady. He does not describe any red flag symptoms, but is becoming a little socially incapacitated by his symptoms. He has been individually and as a combination of therapies Lansoprazole, Ranitidine and Peptac, the latter 3 altogether not making a huge difference unfortunately. I added in some Simeicone again without any major improvement in symptoms.

He was HP positive in 2018 and was given eradication treatment. A repeat HP test in March was negative.

I am at a loss as how to play things with Mr O'Donnell. He works as a taxi driver at irregular hours and I am a little reluctant to start him on Amitriptyline given the sedating potential.

If you would be good enough to consider his case and offer me some advice either contacting me directly, or asking to see him in person I would be very happy. I have explained to him should you wish to discuss things with him you might choose to do this over the phone rather than face-to-face.

Whatever the outcome I would be very happy indeed for your help and input.

Many thanks.

Dear Dr Allan

CLN/AA
28th of August 2020

Thank you for your letter about this gentleman who has ongoing dyspepsia and excess gas. He had an endoscopy in 2018 which showed gastritis and at this time he was *Helicobacter Pylori* positive. He was given a course of treatment and I note the negative stool test in March of this year. In terms of further investigation I would suggest that he has his coeliac serology checked to exclude other causes for his symptoms. If this is negative I agree that Amitriptyline does not seem so sensible given he is a taxi driver. I would however consider Imipramine which is less sedating and he could try this at 10 mg nocte and titrate up the dose if he was tolerating it. Sometimes Esomeprazole gives additional benefit over other PPI's but if he has tried Lansoprazole, Ranitidine and Peptac all in reasonable doses together then I think there is little further to be gained in terms of symptomatic management from acid suppression.

Please contact me directly if you have any questions about this letter.

With kind regards.

Yours sincerely,

Dr Colin L Noble, MD
Consultant Gastroenterologist

Time Received : 13:21

Anti-tTG IgA (DS2) 1.1 U/mL (0.1 - 5.0) (a)

(a) Coeliac testing NOTES:

1. If patient is on gluten free diet, negative serology does NOT exclude coeliac disease. For details of required gluten intake to ensure an adequate 'gluten challenge' see RefHelp.

2. Positive serology (tTG-IgA >5U/ml or tTG-IgG >10U/ml) is associated with Coeliac Disease but is NOT diagnostic on its own and for all adult patients endoscopic biopsy is required. As such, where serology is positive at any level, please refer to GI and advise NOT to exclude gluten until diagnosis is confirmed or excluded by a Gastroenterologist.

3. Low level positives (tTG-IgA 5 to 10 U/ml) may be false positives and are relatively common.

4. See GI and Paediatric GI pages on RefHelp for further information and advice.

Results obtained from Serum, Plasma or Whole Blood unless otherwise stated.

CLINICAL INFORMATION

Reason for Referral: Ventral hernia

Main Referral Text: I would be grateful for your review of this 56 year old taxi driver who has a history of a ventral hernia. It has been troubling him particularly over the last 4 years and more noticeably over the last few months. He describes it as enlarging and it is getting to the stage where it is tricky for him to sleep and uncomfortable. Due to his disturbed sleep pattern he is now struggling to work and appears a vicious cycle is emerging. This has been a stressful time for him. He had an ultrasound scan performed in December 2021 which was normal. When he was last seen in surgery in July 2022 the ventral hernia was noted, the patient himself describes it as being approximately 5 inches in diameter. Otherwise his abdomen was normal. He also has an element of PUD and some musculoskeletal back pain as well and is on Esomeprazole and Famotidine for the former.

He would welcome an opinion regarding this hernia and I would be grateful for your review.

CLINICAL INFORMATION

Reason for Referral:	New Slow AF with dry cough, SOBOE and mild epigastric pain.		
Main Referral Text:	We would be grateful for your review of this 57 year old gentleman who presented with weeks history of dry cough and epigastric pain which he says radiates to the right scapula. He describes it as a niggle. He mentioned that he has also been getting dyspnoea on minimal exertion (whilst doing house chores). He denies fever, chest pain, palpitations and other red flags. He has a past medical history of hiatus hernia which he puts the pain down to. He mentioned that he also has an enlarged heart. He is an ex smoker and works as a taxi driver. O/E: Sats:97 HR:49 (irregularly irregular) BP: 162/92 CVS: HS I + II + 0 no heaves/thrills Abdo: SNT Calves/legs: SNT nil oedema Resp: chest clear. We have done an ECG which showed a new slow AF. We are happy to manage him however we wonder if there may be an underlying condition which requires an acute treatment. We thank you in advance. With kind regards, Adepeju Adeyemo Physician associate. D/W Dr S Allan.

Dear Dr RM Falconer

Presentation: PC - 1 WK HX OF DRY COUGH, SOB ON EXERTION, DISCOMFORT IN EPIGASTRIC REGION RADIATING TO RIGHT SCAPULA, CHEST CLEAR OBS - SATS 97, HR 49, BP 162/92 NEWS 1 HX - HERNIA ? SLOW AF

CLINICAL NOTES:

Clinical note: P/C: CHEST PAIN

Hx of P/C:

CP started 2 weeks ago on the posterior lower right side of the chest
the pain is triggered by coughing, heavy lifting or sleeping on that side at night
tried paracetamol which does not really help
this is associated with SOB
occasional dry cough

no fevers

no haemoptysis

no unintentional weight loss - weight stable 98Kg

no recent surgeries

The patient works as a taxi driver and he is sitting most of the day in his care but over the last 2 weeks his car was in maintenance but was keeping himself active around the house

The patient usually gets chest discomfort anteriorly because of the hernia but feels this pain is different

no palpitations

no syncope or presyncope

no trauma

PMH:

epigastric hernia - referred to gen surgery has not been seen yet

HTN

Social:

lives with wife

taxi driver

ex smoker , smoked for about 40 years

once a week drinks 6 pints of beer

Allergies:

NKDA

Medications:

famotidine 20mg OD

esomeprazole 40 mg OD

lisinopril 20mg OD

mebeverine 135mg TDS

peptac

amlodipine 10mg OD

atenolol 50mg OD

O/E:

patient alert and responsive

orientated

NEWS 1 , t 36.4, HR 46, BP 177/78, SATS 98% RA, RR 18

Chest is clear

HS normal

no evidence of DVT

ECG sinus bradycardia, rate 44

Plan:

chase bloods

chase CXR

Bloods normal

D-dimer 293

Wells score 0

CXR normal

CRP AND WCC normal

I note that patient is on Atenolol for difficult to control BP causing the bradycardia

since patient is haemodynamically stable and has no syncopal or presyncopal episodes then
no requirement to alter the atenolol at this stage

I have informed the patient of the results and sent him home with worsening advice

Heba Fahmy

senior CF

05 APR 2023

Dear Mr O'DONNELL,

**MR WILLIAM O'DONNELL, 25 BOSWALL CRESCENT,
EDINBURGH, EH5 2JR
UHPI:500631920R, DoB: 28/10/1965, CHI: 2810651094**

It was nice to see you in the surgical clinic at the Royal Infirmary today following your GP referral about a possible abdominal wall hernia and upper abdominal symptoms.

You get pain in the upper abdomen and right upper quadrant. You notice this particularly at work. It can be linked to following food but also to certain positions at work and when driving.

Over the last couple of years you have been investigated by the medical GI service with endoscopy and a normal ultrasound scan.

On clinical examination there was a divarication of your upper abdominal recti muscles but no hernia in that region. I have explained that there is no indication for surgical treatment to your abdominal wall.

I do not think that this explains your symptoms and for completeness I will arrange for you to have a CT scan of your abdomen. I will be in touch with the results of this when available in case there is anything identified that requires further assessment.

Kind regards,

Yours sincerely

CLINICAL INFORMATION

Reason for Referral:	suspected COPD/asthma
Main Referral Text:	To: Spirometry Department Date: 21/12/2025 Re: Spirometry Request Dear Colleague, I am writing to request spirometry for this 60 yr oldgentleman who has presented with increasing breathlessness on exertion. He reports feeling breathless with physical activities such as cutting the grass and bending over. He has a past history of occasional breathing episodes since his teenage years and notes some relief from using his wife's Ventolin inhaler. He also describes intermittent chest tightness and wheeze. He is an ex-smoker with a 30 pack-year history, having quit 15 years ago. He is a taxi driver and has no known history of asbestos exposure. On examination today, his respiratory rate was 16 per minute with oxygen saturation of 97% on room air. His chest was clear to auscultation. Given the exertional breathlessness and significant smoking history, I suspect he may have an emerging element of COPD. I have initiated a trial of a Ventolin inhaler and arranged a chest X-ray (normal). I would be grateful if you could perform spirometry to aid in the assessment of his respiratory function. Thank you for your assistance. Yours sincerely, Dr Darran Hill General Practitioner
Investigations	
Description	Result Date

Has patient had previous spirometry? : No
 I authorise any required tests for this patient, including all required medicines for the test to be administered by qualified NHS Staff? : true
 If asthma is suspected, I authorise the Respiratory Physiologist to proceed to a Challenge test if deemed appropriate. This involves inhalation of a maximum cumulative dose of 635mg Mannitol as per protocol? : Yes

VC (L)			4.53	100		
FEV1/VC (%)			68.7			
PEFR (L/Min)			481	96		

* This range encompasses 90% of the normal distribution

Spirometry predict methodology: Global Lung Initiative (GLI) 2012

Clinical Details (02-Jun-2026): EX-SMOKER; Breathless On Exertion; Wheeze; ?- C.O.P.D.; Ex-vaper. Chest tightness. ;

Technical comment: All acceptability criteria met.

Primary care report

Baseline spirometry shows ventilatory capacity is within the normal range.

A significant response in FEV1 and VC demonstrated to 2.5mg nebulised salbutamol.

Post bronchodilator results would support a diagnosis of mild COPD using NICE criteria however please note the FEV1/VC ratio is within the normal range for this patient.

FeNO= 31 ppb. Intermediate probability of eosinophilic inflammation. Raised result may support a diagnosis of asthma. Review clinical history and symptoms. May respond to corticosteroids.

Dear Dr Ostrowski,

I reviewed Mr O'Donnell and on 30mg Prednisolone his nasal polyposis was really well controlled. On Flixonase nasules alone it appears to be not particularly well controlled.

I have therefore returned him to oral steroid but left him on 5mg of Prednisolone plus nasules and we will meet again when he is on this dose.

Yours sincerely

S MICALFE

Dear Dr

I saw your patient in the Out patients Clinic today. My clinical impression is :

of great improvement re nasal polyps
on oral steroids but loss of control on
Flixonase alone - please try again
with desc. dose of prednisolone

I advise

— 30mg daily for $\frac{10}{7}$
then 15mg daily for $\frac{10}{7}$

A full letter will follow shortly

then 5mg daily ongoing

Yours sincerely

[Signature]
[Signature]

+ FLIXONASE $\frac{1}{1}$ daily

& Well meet in $\frac{2-3}{12}$
to check a
progress

Dear Dr Ostrowski,

Thank you for referring Mr O'Donnell to the clinic with a 5 year history of an awareness of variable swelling on the anterior aspect of his right hard palate. There is a suspicion that the floor of the nose adjacent to this is also swollen. I have organised some scanning of this area just to demonstrate the pathology.

In addition and responsible for his variable sense of smell is actually quite marked ethmoidal polyposis - I think it was the increased awareness of this that had raised his concern about his palatal lesion putting the two together. I understand that you are currently juggling with his hypertension and I have therefore left it to you to decide whether you would treat him with oral steroids at this moment. Under normal circumstances I would give him 20 days of descending dose Prednisolone and Flixonase nasules as maintenance. I have started him on the nasules and will meet again in 2 months.

Yours sincerely

Dear Mr W O'DONNELL,

Your recent CT scans confirm the presence of a possibly cystic area of your palate and I think it would be a good idea for us to get the opinion of the oral surgeons in the Dental Department. We are due to meet soon anyway to discuss your nasal polyposis but sometime soon I hope you will receive an appointment to visit them and discuss this interesting lesion a little further. It does not appear to be in any way threatening it is just obviously something that has been present for a number of years now and is intriguing.

Yours sincerely

Dear Dr Ostrowski

I saw your patient today. My clinical impression is *ethmoidal polyps* (plus clinically a palatal cyst which will investigate separately) — I gather you're struggling with his hypertension — I would initially treat him with 30mg prednisolone for $\frac{10}{5}$ and then 15mg for $\frac{10}{7}$ but I leave the decision to you

I advise —

also please prescribe

FLIXONASOL

$\frac{1}{2}$ daily

(split between (L) & (R))
nasal

A full letter will follow shortly

Yours sincerely

Thanks
J. Metcalf

CLINICAL INFORMATION**History of presenting complaint / examination findings / investigation results****Presenting complaint**

Description: Lump on hard palate.

Comment: I would be most grateful for your assessment of this gentleman who has a long-standing lump on his hard palate which he thinks has softened recently. There is no bleeding.

Examination reveals a 1 cm, smooth, round mass. . I suspect this is a benign cyst, but wonder if it should be surgically removed?

He is an ex-smoker with a history of hypertension. He lives with his partner and 3 children.

Dear Mr O'Donnell

Your 24-hour blood pressure shows that your blood pressure reading is higher than it should be and Dr Padfield has suggested more treatment. I enclose a prescription for Amlodipine 5 mgs daily, which you should take in addition to your Candesartan 16 mgs per day. As with any new tablet, please read the information leaflet that comes with the tablet, and contact the surgery if there are any significant problems. Please could you see the Nurse within 1-2 weeks of starting the tablets to have your blood pressure re-checked.

Best wishes.

Yours sincerely

Dr Laura J Stobie

Below is an ambulatory BP report on your patient. The graph is displayed for information and to allow demonstration to the patient but the most important figure to consider is the awake time average (calculated on the basis of the patient's diary entry). In general, treatment is recommended if the awake/day average is $\geq 145/95$. Whereas a figure of $\leq 135/85$ should be considered normal (or well controlled if on therapy). A normal ABP in untreated people who have high surgery/clinic pressures defines a lower risk (**not no risk**). Such individuals should be reassured but not lost to follow up. A repeat assessment will need to be considered in the future. The sleep/nighttime pressure may influence management if there is little or no reduction of BP with sleep. Specific comments for the patient can be seen below.

BP Results

Start date: 05/03/2007

Initial BP Recording:

174/98 left

178/91 right

Dear Mr O'Donnell

I understand you have a follow-up appointment with the Nurse later in January. Your results from 29 December 2006 show that you are not anaemic, your kidney, liver and thyroid tests are normal as is your sugar test. Your cholesterol level is however higher than it used to be having been 4 on 15 November 2004 it is now 5.4. I think it would be useful for you to address your diet and I enclose a copy of the Good Hearted Glasgow cholesterol diet sheet. It would be good if you would be able to fast for your next blood test and I enclose a fasting leaflet. The Practice Nurse will also be able to check your blood pressure to make sure that it is not raised, as this would cause risks in the future. It may be that a 24-hour blood pressure monitor would give a more accurate assessment of your blood pressure. She will discuss this with you when she sees you.

Yours sincerely

Dr Laura J Stobie

Dear Dr Ostrowski ,

Re: William O'Donnell , 25 Boswall Crescent Edinburgh EH5 2ER - 28/10/65 -
0631920V

Your patient attended the Cardiovascular Risk Clinic on 17/11/98 where BP was recorded
at 143/78 mm Hg while taking the following medication:

Current Drug Therapy

Cardiovascular Drugs

Candesartan 16 mg daily.

Other Drugs

Nil

Treatment Recommended

Cardiovascular Drugs

No Change

Other Drugs

No Change

Comments

His blood pressure was well controlled at 143/78 today. I therefore recommend discharging
him from clinic. If he should require any further additional treatment in the future I would
suggest the next step would be the addition of a thiazide diuretic.

Follow up arrangements

The patient has been discharged from the clinic, please re-refer if problems arise.

Yours sincerely

J. Spratt

Dear Dr. Ostrowski

Re William O'Donnell D.O.B. 28/10/98

Your patient Mr O'Donnell has recently completed a study for us at the Clinical Research Centre. The study examined the effects of BP lowering on left ventricular hypertrophy in hypertensives using Candesartan.

Mr O'Donnell achieved excellent BP control throughout the study, his most recent BP being 147/87. I would therefore recommend continuing him on this therapy at present. He is due for further review in 4/12.

Yours sincerely,

James Spratt
Clinical Research Fellow

CARDIOVASCULAR RISK CLINIC -30/9/97

Dear Dr Ostrowski

William O'Donnell, 25 Boswall Crescent, Edinburgh, EH5 2ER (28/10/65)

Thank you for your referral of your patient, Mr O'Donnell. Mr O'Donnell is a patient who has had borderline blood pressures for approximately 4 or 5 years. His past medical history is otherwise unremarkable. He is currently unemployed and has no symptoms. Mr O'Donnell smokes 10 cigarettes a day and is a moderate consumer of alcohol.

On examination, there were no findings of note. There are no fundoscopic changes or evidence of peripheral vascular disease. His heart sounds were normal on auscultation. U&E showed elevated urea of 9.2 but were otherwise normal. ECG showed sinus rhythm and appearances consistent with left ventricular hypertrophy, very much in the borderline range. His 24 hour ambulatory blood pressure monitoring showed a total average of 150/81, daytime average of 161/89. Mr O'Donnell is again one of those patients who is somewhat in the borderline region. As a result, I have arranged for him to have an echocardiogram. If he has evidence of raised left ventricular mass then he will need therapy. In the meantime, I have arranged to see him again in 5 weeks' time after giving him non-pharmacological advice as to how to lower his blood pressure.

Many thanks once again for your referral.

Yours sincerely

J Spratt

Dear Doctor,

I would be most grateful for your assessment of this gentleman whose blood pressure is borderline on several occasions, 160/90 in October 1992, 160/80 in December 1991, 160/80 2 weeks ago. A recent ECG shows borderline left ventricular hypertrophy but may be normal variant. In view of his young age I wonder if you feel he warrants 24 hour monitoring before initiating therapy.

Unfortunately he continues to smoke. His father has hypertension and ischaemic heart disease.

Yours sincerely,

Dr. N.M.J. Ostrowski.

Dear Doctor,

I would be most grateful if you would assess this man for vasectomy.
He is currently responsible for 4 children with his current wife
and does not wish any more.

He is a smoker and his blood pressure was marginally elevated today
at 160/80 and this is being followed up.

Yours sincerley,

Dr.N.M.J. Ostrowski.

Clinical Notes: PC - Blisters on feet. Hx - This 35yr career of
 Son returned from Lanzarote early this am. His
 day there he did not apply sun protection it was
 in his case. When he took socks off when he came
 home noticed huge blisters on both ankles.

PMH Hypertensive DH Meds for BP NKDA. All

of both ankles. Gross erythema and large 3cm x 3
 wobbly blisters several on anterior both distal
 shins. Skin is intact except for small area of
 dorsum of foot where it was stood on yesterday.
 Burns are not circumferential distal sensation
 circulation normal.

Plan Blisters are threatening to burst and as they are
 sock top level I have de-roofed them.
 Vaseline gauze dressings with fluffy swabs & pad.
 for review in 2/7 but if soaked through will
 return tomorrow.

ORT 54

DATE	NAME OF PATIENT O'DONNELL William	28.10.65 DATE OF BIRTH
CLINICAL HISTORY 19.3.92. <u>DIAGNOSIS</u> <u>HISTORY</u> SEE A/E NOTES This young man was seen in A/E yesterday because of a cut over his right wrist. It was found that he had a partial damage to his flexor carpi ulnaris tendon. This was repaired using <i>nylon</i> stitch and the wound was closed. He was fitted with a Spencer wrist support. On inspection today there is no sign of infection and wrist movements seem excellent. He would prefer being seen by his GP for removal of stitches and he should be seen there in 2 weeks' time. He should use his Spencer wrist support for 2-3 weeks. DISCHARGED LTD S. SJOLIN/HMF

HIST: L. handed labourer. Cut R. wrist with stanley knife while cutting carpet.
ATT 1 year ago.

EXAM: 6 cm. lac. palmar surface of R. wrist. FCU 90% divided.
FROM wrist and fingers. N/V intact.

DIAG: Division flexor carpi ulnaris L. wrist.

Discussed with Dr Small, A/E Reg. , told to refer to Orth. Reg.
Dr Johnstone, refused referral asking that this should be repaired in
A/E placed in backslab and given FRACTURE CLINIC follow-up.

1% Lignocaine 5 mls was infiltrated around the wound by Dr Campbell -
sup. vessel was ligated with a vicryl tie,

Discussed with Miss Oliver who said that flexor tendons should be repaired in
Theatre

I discussed this with Dr Johnston who refused to take this patient to theatre
He came to the A/E Dept. and repaired the tendon under L.A. in the Examination
Room with interrupted prolene sutures. He requested that the SHO close the
skin and this was done with 5 x 4/0 Ethilon sutures.

D.D applied.

Dr Johnstone did not require a splint or follow-up.

I have discussed this case with Dr Robertson, Consultant in A/E, who agrees
that the examination was an inappropriate place for this procedure to be
performed.

PLAN: Place in spencer splint - FRACTURE CLINIC 18.3.92 MISS OLIVER/EL

Dear Dr Galloway,

Re:- Mr D.W. O'Donnell, 14 West Pilton Circus, Edinburgh

I enclose an application on Mr Donnell's behalf for a grant from the Chest, Heart and Stroke Association.

I wonder if you would be so kind as to complete the Medical Certificate on the back page and return the form, either to me in the enclosed prepaid envelope or direct to the Chest, Heart and Stroke Association.

Yours sincerely,

John A. Stevenson
Social Worker

Dr. W. Galloway,
1 Muirhouse Avenue,
Edinburgh.

Dear Dr. Galloway,

William O'Donnell, 14 West Pilton Circus,
Edinburgh

Thank you for your letter about this patient. The history given both by the youngster and his father were difficult to evaluate.

On clinical and radiological examination however there were definite abnormalities. Enlarged lymph nodes were palpable in both posterior triangles and in the left axilla.

Chest X-ray showed an inflammatory process in the left lower zone.

Conclusion: This youngster has a low-grade pneumonia. He may also have glandular fever but the results of a mono-spot and examination of the blood is awaited. Meantime he should have chemotherapy (not ampicillin). Co-trimoxazole would be appropriate.

Unfortunately William misinterpreted our instructions and left the hospital immediately after the X-ray, otherwise we would have directed him to you to make arrangements about treatment. In conclusion I think the primary trouble is an infective illness with some secondary syncope. His dislike of school no doubt further blurred the symptomatology.

Yours sincerely,

John Macleod

Dear Dr. McLeod,

Re: WILLIAM O'DONNELL, 14 West Pilton Circus, Edinburgh D.O.B. 28.10.65

I would be grateful, if you would see this patient, a young lad who is supposed to be having fainting turns. His parents requested that you see him as you know his mother and you cured her. I have made nothing out about William at all. He has an odd story of having been a very healthy child and I think he falls into one of two categories either he is a young man who is unwilling to go to school. The overriding medical factor is that he seems to be pale and has enlarged glands in the neck. I have not done any special tests at all.

I have seen William, looked closely at him and examined him and I thought he was probably suffering from some mild virus infection and considered

Re: WILLIAM O'DONNELL

Continued

considered the possibility that he might have glandular fever. Every time I thought he would be better, he has been until the day he was due back to school, when he has a fainting turn. This repetition of pattern seems to be a habit and at mother's request, I wonder if you would see him. I regret I am sending you a patient with no tests done on him at all but I would be very grateful for your help.

Yours sincerely,

WALTER GALLOWAY.
