Dear Sir/Madam

Re: Subject Access Request under the General Data Protection Regulation

Patient: DAVID MOUTREY **D.O.B: 22/06/1954**

Thank you for your request received 28TH May 2026 in which you seek a copy of your client's personal information.

Your request has been dealt with in line with our requirements under Article 15 of the General Data Protection Regulation and I now attach the following:

GLASGOW ROYAL INFIRMARY & STOBHILL HOSPITAL RECORDS

Please be aware that these health records have been reviewed by a clinician and any information identifying or provided by a third party has been removed.

We process personal information to enable us to provide healthcare services for patients; support and manage our employees; to carry out research and clinical trials; maintain our accounts and records and to carry out data matching under the national fraud initiative. We also use CCTV systems for crime prevention.

This personal information can be both clinical and non-clinical in nature and can include

- Patient health records, photographs or radiology images
- Video/telephone recordings, including CCTV images
- Witness statements
- Incident reports
- Complaints files
- Emails

Dr MW Robinson
Springfield Medical Practice
9 Springfield Road
Bishopbriggs
Glasgow
G64 1PJ

Dear Dr MW Robinson
CHI Number: 2206546116
Patient Name: David Moutrey
Referral Date: 08/08/2025

Advice Response to recent Referral:

This 71y man with T2DM, vascular disease (STEMI, CVA. cor art stents) and obesity has good excretory function (eGFR >60ml/min) and low level albuminuria (uACR 27). This is well below the level at which we would see patients in the Renal Clinic. He is currently very unlikely to develop renal-replacement-requiring kidney failure in the next 5 years,
His blood pressure is well controlled. He is already on ramipril and a statin. If his uACR rises >30 or his uPCR>50, you could add an SGLT2i (and fineronone when uPCR >100) with appropriate monitoring in the community. If his eGFR falls below 35ml/min or his uPCR rises into the nephrotic range (>300) in spite of the above additions, please do not hesitate to get back in touch.

Yours Sincerely

Dr Siobhan McManus

Dear Dr Boyce ,

David Moutrey; D.O.B: 22/06/1954; CHI: 2206546116
11 Montrose Terrace , Bishopbriggs , Glasgow, Dunbartonshire, G64 1JQ

Diagnosis:

Chronic plaque psoriasis

Iron deficiency anaemia

I now have the blood results for this patient who attends the dermatology unit with chronic plaque psoriasis and is currently on Acitretin 20mg once daily. Recent blood tests have shown an iron deficiency anaemia which consultant Dr Harkins feels needs to be investigated and I would be grateful if you could arrange for this. He will be followed up in the dermatology clinic in November as previously arranged.

Yours sincerely,

Nurse Morag Elspeth McCabe

Clinical Nurse Specialist

Dear Doctor ,

David Moutrey; D.O.B: 22/06/1954; CHI: 2206546116
11 Montrose Terrace , Bishopbriggs , Glasgow, Dunbartonshire, G64 1JQ

Mr Moutrey attended the nurse led clinic today for review. He has now been on dual therapy for six months and has noticed a significant improvement with his storage and voiding LUTS. Unfortunately he was not prepared for a flow test today. He was not keen to stay in the department to fill his bladder and given that his symptoms have greatly improved I have not arranged any further follow up. I did make Mr Moutrey aware that if his symptoms change in the future I would be more than happy to see him back.

Yours Sincerely,

Andrea Reader

Mr Moutrey attended the Urology Clinic accompanied by his wife. He is currently on combination treatment for his prostate gland and happy with his lower urinary tract symptoms. He has a benign feeling prostate gland on rectal examination. His PSA is reassuringly low and nothing of concern was found on MRI scan. I have not arrange for any routine urology follow-up.

Yours sincerely

CARDIAC REHABILITATION OUTCOME

This patient completed a supervised outpatient exercise programme and has now been discharged from NHSGGC Cardiac Rehabilitation Service. Please continue to monitor their coronary heart disease risk factors within your chronic disease management programme.

Progress:

David has not reported any cardiac symptoms. He is limited by chronic back pain, however has found a low intensity gym programme to be more manageable than walking. He has been referred to the Live Active Exercise Scheme at Bishopbriggs Leisuredrome so that he can get some support with establishing a similar programme for long term fitness maintenance.

If you require any additional information then please do not hesitate to contact me.

Yours sincerely

Vivien Kerr

Dictated Date: 23/08/2022
Transcribed Date: 24/08/2022

Dear Dr Boyce ,

David Moutrey; D.O.B: 22/06/1954; CHI: 2206546116
11 Montrose Terrace , Bishopbriggs , Glasgow, Dunbartonshire, G64 1JQ

Mr Moutrey attended the nurse led prostate assessment clinic today. As you will be aware, over the last 18 months he has been having some difficulty voiding with hesitancy, daytime and night time frequency, and a feeling of incomplete emptying. He denies any dysuria or visible haematuria.

Mr Moutrey started taking Tamsulosin in January of this year and feels that it has helped to improve his flow, however his other symptoms persist.

Mr Moutrey's PSA from January was within normal range at 1.3. Examination of his prostate today revealed an enlarged asymmetrical firm right lobe with no nodules. I was however unable to examine all of his prostate gland today and for this reason have arranged for an MRI of his prostate.

Mr Moutrey has a history of type 2 diabetes, gout, cirrhosis, and a cardiac history. He is a non-smoker with an occasional alcohol intake and reports his bowels to be normal.

Mr Moutrey attempted to carry out a flow test today. Unfortunately, his flow was not particularly helpful with a small volume of 80ml voided. Urinalysis showed 2+ of glucose and a post void residual of 80ml.

I have given Mr Moutrey some fluid advice with regards to caffeine and carbonated drinks. I have also advised him to restrict his fluid intake towards the evening in an attempt to reduce his noctuira and we discussed bladder training today also.

I will arrange for Mr Moutrey to return in 3 months time where we can hopefully repeat his flow with a larger volume and will have the results of his MRI to discuss also.

Yours Sincerely

Dear Dr Boyce,

David Moutrey; D.O.B: 22/06/1954; CHI: 2206546116
11 Montrose Terrace , Bishopbriggs , Glasgow, Dunbartonshire, G64 1JQ

It was a pleasure to see Mr Moutrey today in our clinic. He is a 67 year old ex-smoker who for the last year and a half has been suffering from intermittent hoarseness as well as persistent throat clearing. He has occasional symptoms of overt reflux. He denies any odynodysphagia and he has been eating and drinking normally with no weight loss. He has recently been started on Omeprazole and during the last 3 months this has substantially improved his symptoms. He has a past medical history notable for type 2 diabetes, angina, heart failure and left ventricular systolic dysfunction. He is currently on Apixaban, Atorvastatin and Bisoprolol.

Endoscopic examination of his nose, nasopharynx and the upper aerodigestive tract was largely unremarkable other than features of laryngopharyngeal reflux with oedema of the posterior commissure and hypopharyngeal mucosa. There were no other abnormalities spotted.

I had a good conversation with Mr Moutrey and explained to him the aetiology of his symptoms, it is likely from reflux disease. I have encouraged lifestyle modification as well as addition of Gaviscon to his daily routine, particularly nocturnally. I have not made any plans to see him back.

Yours sincerely,

Saleh Okhovat

I note this patient's recent CT Coronary Angiogram showing the patent grafts. There is narrowing in the native circumflex and obtuse marginal branch which has been suggested as a source of ischaemia. I note that he is due to have an Outpatient clinic appointment on 16.11.21. If he is continuing to have chest pain please let us know in the interim and I will arrange for early selective Coronary Angiography.

Yours sincerely

Dear Doctor,

David Moutrey; D.O.B: 22/06/1954; CHI: 2206546116
11 Montrose Terrace , Bishopbriggs , Glasgow, Dunbartonshire, G64 1JQ

Mr Moutrey's CT angiogram showed that the three coronary artery bypass grafts are of satisfactory patency. This provides a good blood supply to the RCA and LAD and also to one of the branches. The left circumflex showed flow limiting disease which can be responsible for ischemic symptoms. When he presented to the hospital last month he was in SVT atrial flutter which was treated medically. He had an exercise tolerance test and only managed to achieve 60% of his predicted heart rate. He had no symptoms of angina or ST changes. Mr Moutrey will be seen in the outpatient clinic to assess his symptoms and the need for further intervention.

Yours sincerely,

Dr Ahmed Abouzaid

Date and Time of Appointment - 24/03/2026 14:00

Clinical Comments:
Diagnosis:

Psoriasis

Hypertension

Diabetes

Previous stroke

Previous paronychia affecting the thumb and middle finger - now settled with lower dose Acitretin at 10mg

Current Management:

Acitretin continues at 10mg once daily - reduced in December 2025

Investigations:

Full blood count, lipids and LFTs further updated today

Follow Up:

4 months

It was a pleasure to meet David through my nurse led clinic. His psoriasis has remained fairly settled with the reduction in his Acitretin from 20mg down to 10mg due to experience recurrent paronychia mostly affecting his thumb and middle finger. On review this is greatly settled and his psoriasis continues to remain fairly settled with just some small plaques but overall David is happy with the clearance and happy to continue at the low dose of 10mg. I have therefore updated bloods as above and issued a further prescription till his next review in 4 months.

Yours sincerely,

Nurse Christine Flynn

Attendance: Specialty - Dermatology; Clinic - STEMDE5-NURSE LED SECOND LINE CLINIC WED AM
Date and Time of Appointment - 17/12/2025 09:30

Clinical Comments:
Diangosis:

Psoriasis.

Hypertension.

Diabetes.

Previous stroke.

Recurring paronychia with thumb and middle finger.

Management:

Trial of reduced dose of Acitretin 10mg daily.

Investigations:

FBC, lipids and LFT's.

Follow up:

3 months.

I reviewed David at the Nurse Led Second Line clinic today. Overall his psoriasis has been well controlled on his current dose of Acitretin, but he has had recurring paronychia over the last 3 months on his left thumb and middle finger, which has required both oral and topical antibiotics.

On examination today he had a few tiny plaques of psoriasis on his lower back, and I have suggested he apply Enstilar once daily to the affected areas for the next 4 weeks then reduce to twice weekly on non-consecutive days as maintenance.

He continues to have dry, cracked peeling skin on his left thumb and middle finger, and I discussed a trial of a reduced dose of Acitretin to see if his fingers improve with the lower dose. David was happy to trial this. I have issued him with a prescription for Acitretin 10mg once daily today, and I have brought him back slightly earlier in 3 months to ensure his psoriasis remains controlled.

Date and Time of Appointment - 20/08/2025 15:45

Clinical Comments:
Diagnosis:

Psoriasis.

Hypertension.

Diabetes.

Previous stroke.

Management:

Acitretin 20mg daily.

Bloods taken today for U&Es, LFTs, FBC, non-fasting lipids.

Glucose.

Betacap lotion to be used at night time as required.

Follow up:

Nurse Led Second Line clinic - 4 months.

I reviewed Mr Moutrey in clinic today. He has been well since his last review. He continues on Acitretin which has been very effective for his psoriasis.

On examination today he had small patches of psoriasis at his lower back and his lateral hip area. His PASI score was <2 today. He is having mild dryness of his lips and finds that this is tolerable. We did discuss the option of reducing his Acitretin dose but he feels that this not problematic enough to merit that and he is happy to continue this.

I have made no changes to his treatment today other than suggesting adding Betacap as he has some small areas of psoriasis on his scalp which are intermittently itchy.

Finally Mr Moutrey requested review of a lesion on his upper chest. Clinically he has a 3mm area just over the sternoclavicular joint on the left hand side which is purple. On dermoscopy it has visible lacunae that is in keeping with a haemangioma, I have reassured him.

Dr Harkins patient.

Diagnosis:

Chronic plaque psoriasis.

Diabetes.

Obesity.

Previous MI.

Atrial flutter.

Hypertension.

Previous treatments:

UVB phototherapy - total of 58 treatments.

Current Management:

Acitretin 20mg once daily.

Dermax shampoo as required.

QV wash as soap substitute.

Zerodouble as emollient.

Investigations:

FBC, lipids and LFTs.

Follow up:

4 months - General clinic.

I reviewed David at the Nurse Led Second Line clinic today. I am pleased to say that this psoriasis remains well controlled on his current dose of Acitretin and he denies any adverse effects from the medication.

On examination today he had some small residual flat plaques on the dorsum of both his hands. Otherwise his skin was clear.

I have simply updated his bloods as outlined above and I have issued him with a further prescription for his Acitretin. He has an appointment for review at Dr Harkins general clinic.

FOLLOW-UP:

4 months

I reviewed Mr Moutrey at the Nurse-led clinic today his skin remains well controlled on his current dose of Acitretin and he denies any adverse affects from the medication.

On examination today he continues to have a few small scattered flat plaques on his lower back and post-inflammatory staining on his thighs and hands. He had some mild erythema of his scalp today and I have suggested a trial of Dermax shampoo to see if this settles it. Previous bloods had shown low haemoglobin and David tells me he has completed a course of iron supplements and has had his bloods repeated on the 28th of November which show his haemoglobin is still low and that further iron supplementation has been prescribed and that he has a follow-up with yourself regarding this.

Today I have checked lipids and issued him with a further 4 months supply of Acitretin 20mg once daily. He has an appointment for review in 4 months time.

Kind regards,

11 Montrose Terrace , Bishopbriggs , Glasgow, Dunbartonshire, G64 1JQ

Attendance: Specialty - Dermatology; Clinic - STEMDE5-NURSE LED SECOND LINE CLINIC WED AM
Date and Time of Appointment - 24/07/2024 11:00

Clinical Comments:

Diagnosis:

Chronic plaque psoriasis.

Diabetes.

Obesity.

Previous MI.

Atrial flutter.

Hypertension.

Previous treatments:

UVB phototherapy - total 58 treatments.

Management:

Acitretin 20mg once daily.

QV wash as soap substitute.

Investigations:

FBC, lipids and LFTs.* **Hb 125, Alk Phos 167 referral to phlebotomy for haematinics and repeat LFT**

Follow up:

4 months.

I reviewed Mr Moutrey at Nurse Led Second Line clinic today. He remains on Acitretin 20mg once daily and denies any adverse effects from the medication.

On examination today his psoriasis has continued to improve since his last visit. He has some small plaques on his lower mid back and the dorsum of his hands and lower legs. Otherwise his skin was clear.

His skin was dry today and Mr Moutrey states he applies emollients which he buys over the counter and I have suggested that he obtained an emollient from yourselves. I have given him some emollient samples today to try and I would be grateful if you could prescribe his preferred options. I have also suggested some QV wash to be used as a soap substitute and I would be grateful if you could prescribe this as per my electronic request.

I have rechecked bloods as outlined above and he has a follow up appointment for review in 4 months time.

Yours sincerely,

Elspeth McCabe

Hypertension

Previous Treatments:

UVB phototherapy - total 58 treatments

Management:

Acitretin 20mg once daily

Investigations:

Full blood count, U&Es, LFTs

Follow Up:

5 months

I reviewed Mr Moutrey at the dermatology clinic today. He has been on Acitretin 20mg once daily for approximately 4 months now and aside from some mild dryness of his lips denies any adverse effects from the medication.

I am pleased to say that his psoriasis has greatly improved since he commenced Acitretin and he is delighted with his skin. On examination today he had some small partially resolved plaques on his lower back, arms, elbows and a partially resolved larger plaque on his abdomen. There was minimal scale evident today and all plaques were pale. I have rechecked bloods as outlined above and have issued him with a further prescription for Acitretin 20mg once daily for the next 5 months. He has a follow up appointment for review but knows to contact us sooner if any problems arise.

Yours sincerely,

Nurse Morag Elspeth McCabe

Clinical Comments:
Diagnosis:

Chronic plaque psoriasis

Diabetes

Obesity

Previous MI

Atrial flutter

Hypertension

Previous treatments:

UVB phototherapy - total 58 treatments, recently completed August 2023

Management:

PASI 5.4

DQLI 28

Blood tests + 8 weeks later - phlebotomy hub requested

Acitretin 20mg once daily - 4 month hospital prescription issued

PIL on Acitretin provided

Enstilar foam spray to affected areas once a night for 4 weeks, thereafter twice weekly

Hydromol ointment twice daily

QV gentle wash as soap substitute

Follow up:

Nurse led 3 to 4 months

I reviewed this patient in clinic. He had a course of UVB phototherapy from June to August 2023 which resulted in a slight improvement in his psoriasis. His psoriasis continues to impact his daily activities and his relationship with his wife. At present, he applies Enstilar foam to the affected areas, Dermovate to the ears, E45 cream twice daily and uses a non-fragrance soap to wash.

I understand that he has also been referred in view of a rash on both hands and lower legs. The rash on his hands appears in keeping with psoriasis and on examination today, there was no purpura seen on the lower legs. PASI today was 5.4 and DLQI 28.

We discussed further treatments today and I have discussed his case with Dr Harkins. He drinks occasionally, around 5 shots of vodka a month and is a non-smoker. We have agreed to start him on Acitretin and I have counselled him on the risks including skin dryness and liver dysfunction.

He will be seen again in 3 to 4 months.

Yours sincerely,

Dr Puo Nen Lim

Date and Time of Appointment - 12/12/2022 09:40

Clinical Comments:
Diagnosis:

Psoriasis.

Recent MI June 2022.

CABG 2003.

Atrial flutter.

Hypertension.

Management:

Referred for further course of UBV start of 2023.

To restart Enstilar foam spray once daily for 4 weeks, then reduce down to twice weekly.

Emollients.

Follow up:

6 months after UVB has finished.

I reviewed David today at clinic whose psoriasis has started to breakout more. There was small psoriatic patches evident on his chest, back, arms and legs. He tells me he has not been complying with his Enstilar foam spray so therefore I have emphasised that he restarts this and I will suggest a course of UVB at the beginning of next year which he has had in the past which has helped clear his skin. I have suggested he uses the foam spray until he is seen for his UVB. An appointment will be made after his UVB has finished for 6 months time for further review.

Attendance: Specialty - Urology; Clinic - STARUR8-NURSE READER URO THURS PM
Date and Time of Appointment - 10/11/2022 15:00

Clinical Comments:

Mr Moutrey attended the nurse-led clinic today, along with his wife.

They have just returned for a holiday in Spain and seem to be keeping well. He tells me that his day-time frequency and nocturia are not quite as bothersome, however, his flow and occasional urgency remain a problem. As you are aware, he is already on tamsulosin.

Mr Moutrey carried out a flow test today, which was fairly slow and prolonged. He is, however, emptying his bladder well enough.

We discussed the addition of finasteride, along with his tamsulosin, for the next 6 months and I have advised him of some possible side effects. He is happy to trial this and we can arrange for a repeat flow test thereafter.

MRI of the prostate, from October, did not show any evidence of malignancy and his PSA, as previously mentioned, was normal at 1.3. I have, however, advised Mr Moutrey that, given the findings on his examination, I have arranged for a consultant review for his prostate to be re-examined, to ensure that there is no need to arrange for any prostate biopsies.

Clinical Comments:
Diagnosis:

Psoriasis.

Recent MI (June 2022).

CABG 2003.

Atrial flutter.

Hypertension.

Management:

Enstilar foam once daily for 4 weeks, then twice weekly as maintenance.

Continue regular emollients.

Follow up:

4 weeks - Nurse Led topical clinic.

I reviewed David today at clinic. He recently completed a course of UVB therapy which stopped in May 2022. Unfortunately shortly after this David suffered a myocardial infarction. He reports today that he is feeling well following this. Possibly due to the stress of this David's skin has subsequently flared with his psoriasis.

On examination today he had active psoriasis across his upper torso, back, arms and legs. He has just been using emollients to these areas. I have advised that he recommence the above topical therapy. David was keen for another course of UVB therapy, however, I did explain to him that we would only give this once a year.

Yours sincerely,

Alison Tonagh

Attendance: Specialty - Cardiac Rehab; Clinic - STCRCA78-CR ASSESSMENT THURSDAY ALL DAY
Date and Time of Appointment - 23/06/2022 13:15

Clinical Comments:
DIAGNOSIS:

Inferior STEMI on 03.06.2022.

ANGIOGRAM:

PCI with drug eluting stent x 1 to SVG graft - right PDA. Drug eluting stent x 2 to circumflex artery.

ECHO:

LV systolic function at lower end of normal.

GP RECOMMENDATIONS:

Mr Moutrey advises that he had bloods checked today at your surgery however he is not sure what these are. If U+E's were not included in the blood draw I would be grateful if they could be done at your earliest convenience. Please also check HbA1c in 6 to 12 months as per GG&C immediate discharge letter dated 07.06.2022.

PROGRESS SINCE DISCHARGE:

Mr Moutrey attended Stobhill Hospital today for his Post MI Clinic accompanied by his partner, Laura. He appears to be making a very good recovery and reports no cardiac sounding chest pain therefore has not required the use of his GTN spray. He understands the correct usage should it be required. He denies any breathlessness, in fact this has improved since prior to his MI, and he also denies any palpitations. He describes almost daily symptoms of postural dizziness however he is taking things easy to keep this at bay. I see no evidence of ankle swelling and Mr Moutrey informs me that this has greatly improved since he was in hospital for his MI. He continues on Spironolactone and Furosemide however he has an appointment with the Post MI LVSD pharmacist on 30.06.2022 and this may be addressed.

MEDICATIONS:

Mr Moutrey will continue with triple therapy with Aspirin, Clopidogrel and Apixaban for 1 month post MI and thereafter will continue with Clopidogrel and Apixaban indefinitely. He is on appropriate secondary prevention medications and these will be assessed in due course at the Post MI LVSD Clinic. I note he continues to be on Isosorbide Mononitrate and was asking whether this could be stopped and I have advised that he ask the pharmacist this question when he sees her next week.

VITAL SIGNS:

Blood pressure 111/73, heart rate 68bpm and regular.

MODIFIABLE CORONARY HEART DISEASE RISK FACTORS:-

Smoking: Ex smoker of 7 years.

Alcohol: Within daily and weekly limits.

Diet: Does not meet current healthy eating recommendations however has been making positive changes to his diet since his MI.

Weight: 103kgs. BMI: 35.6. We have had a long discussion today regarding the importance of weight loss and Mr Moutrey is very keen to lose quite a bit of weight. Much education was provided regarding this. He has declined referral to Weight Watchers.

Cholesterol: 3.8, Triglycerides 1.2 on 03.06.2022.

Hypertension:

Diabetes: Yes, type 2. HbA1c 48 on 06.07.2022. It came as no surprise to Mr Moutrey that he now has type 2 diabetes. We had a long discussion today regarding education surrounding this and the importance of weight loss and activity, although he does tell me he suffers from quite uncomfortable lower back pain and is limited with his activity levels.

Stress: No symptoms of low mood or anxiety noted today.

ADDITIONAL INFORMATION:

Mr Moutrey was assessed today by our cardiac rehabilitation physiotherapist and he has been enrolled in a programme of exercise at Stobhill Hospital gym combination with a home exercise programme. Prior to his MI he worked as a heavy plant operator and now advises me today that he he is planning on retiring.

FOLLOW-UP ARRANGEMENTS:

Mr Moutrey has an appointment with the Post MI LVSD pharmacist on 30.06.2022.

We will update you on his progress in due course, however should you require any further information, please do not hesitate to contact me.

Yours sincerely

Date and Time of Appointment - 13/01/2020 15:50

Clinical Comments:
DIAGNOSIS:

Chronic plaque psoriasis

MANAGEMENT:

Capasal shampoo or Alphosyl 2:1

Epaderm cream as an emollient

Enstilar foam once daily when required

FOLLOW UP:

Discharged

This gentleman had attended my colleague in September 2019. She had given him a Phillips Blue Light to try for targeted plaques of psoriasis which he used and found very helpful. His large plaques of psoriasis have broken up into very small plaques. He then treated his small plaque psoriasis with

Enstilar foam which cleared his psoriasis completely. He had plaques on the back of his hands which he has had for many years and the Enstilar cleared these very quickly.

On examination today he had small plaques of psoriasis on his elbows, arms, thigh and he told me that this was because he was on holiday and had not treated his skin in the last month. He tells me once he starts using the treatment again the Enstilar will completely clear things. In view of this I think if he uses this in this manner then there is no reason why he could not continue with it. I have suggested that when it starts to get smaller he may want to change to Dovonex to these very small areas or some Dovobet ointment but certainly when things are worse he could use the Enstilar foam. As things have improved I have discharged him from clinic today.

Yours sincerely

Dear Mr Moutrey,

I am writing to you to update you of the results of your investigations performed after seeing you in Professor Roxburgh's Surgical Clinic with a degree of anaemia and a raised qFIT. Your colonoscopy initially was normal apart from some skin tags which we do not need to do anything about. A gastroscopy was also arranged due to iron deficiency anaemia. Some biopsies from this were taken which have come back as normal as well.

As such, we can safely discharge you from the Surgical Clinic. This small degree of anaemia can be managed in your GP Surgery. Should there be any changes in your condition, we would be more than happy to see you again and your GP would just need to refer you in to see us.

Any further questions, please do not hesitate to be in contact.

Many thanks.

Dear Mr Moutrey,

I am one of the Stroke Consultants at Glasgow Royal Infirmary, and I work with Dr McKenna, who saw you during your admission in November. I hope that you are keeping well and that you have had no further right sided weakness.

Thank you for attending the scan of your neck arteries in late November 2023, this did not show any significant narrowing. This means that we do not need to make any changes to your current medications.

Hopefully, by the time this letter reaches you, one of the Stroke Nurses will have been in contact with you to how you are doing.

Kind regards.

Yours sincerely

Dear Dear Mr Moutrey,,

I have now received the results of the MRI scan of your prostate which you had carried out on 3rd October.

Reassuringly this shows no abnormality within your prostate.

I will therefore see you again in November as previously planned .

Kind Regards

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: FAO Dr Catriona Harkins for advice – chronic paronychia left thumb and left middle finger

Comment: Dear Dr Harkins,

I would be grateful for your advice on this 71 year old gentleman who is known to you with a history of psoriasis, on Acitretin 20mg daily. We have seen him in primary care 4 times over recent months with flare ups of left middle finger and left thumb paronychia, which settled with antibiotics and then flared again. He has had 3 courses of oral antibiotics with Fucidin H in the last 3 months and I have reviewed him again today with a further flare of left and middle finger and left thumb paronychia. He keeps his nails clean and dry and doesn't use any irritants, and also doesn't bite his nails.

I have attached pictures but would be grateful for any further advice or recommendations for management of this chronic paronychia.

Many thanks.

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: review of hearing aids

Comment: Many thanks for seeing this 71 year old gentleman who is known to Audiology with a history of bilateral hearing loss and had bilateral hearing aids. Both David and his wife report that the hearing aids are becoming progressively less effective as time passes and his wife reports that David's hearing is generally really poor despite the hearing aids. He is keen to have his hearing reviewed and I would be grateful if you could reassess him and manage appropriately.

Many thanks.

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: Request for colonoscopy

Comment: This 70 year old male presented with iron deficiency anaemia which was incidentally picked up on a blood test. He denies any symptoms. No weight loss, no family history of bowel issues. No change in bowel habits.

His Q-fit has come back positive at 135.

I would be very grateful if he could be seen for a colonoscopy.

Many thanks.

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: Request for advice - rash - photos attached

Comment: I would appreciate your advice on the diagnosis and management of this gentleman's rash. He is 68y old with a background of psoriasis, obesity, diabetes (well controlled), MI, recent raised ACR – awaiting repeat.

He has had a bilateral angry red rash on the dorsal aspects of both hands for the past 6 weeks or so. This is not painful or itchy but does look very angry and is not responding to his usual enstillar. The rash seemed to flare/swell further when he was away in Spain and he was started on a Cefalosporin antibiotic which has not had much effect.
Over the past few days he has developed a non blanching petechial rash on his lower limbs which looks like possible vasculitis.
He has not started any new drugs that he can think of.
He feels otherwise well.

His BP was raised with me but on repeat at home is normal 135/80. He had a raised ACR in early May and I have asked him to drop a further urine ample off but we are awaiting this. He also had some bloods taken today - FBC, UEs, ESR, ANA - results awaited.
I am looking for advice on what might be causing the rash on his hands and what treatment to try.

He is also awaiting UVB treatment for psoriasis but has not yet heard anything about this. If you are able to give any info on when this is likely to happen I can let him know.

Many thanks,

Sian Ashby

History of presenting complaint

Presenting complaint

Description: Patient requesting UVB again

Comment: Please see referral below send on the 30th of June. Mr Moutrey is requesting his referral to be upgrade to urgent and states this was advised by a secondary consultant also. Many thanks.

Patient requesting UVB again
This 68 year old man is experiencing a flare of is psoriasis again. He has requested a re-referral for UVB treatment. It looks like he is not long finished this so I'm not sure if this is possible. Many thanks.

Reason for referral

Care type requested: Out Patient

Description: See free text

Comment: I would appreciate your review of this 67 year old gentleman who has had persistent symptoms of reduced urine flow, nocturia and hesitancy since May 2021. He was started on Tamsulosin in January 2022 and has been reviewed at the three month mark where his flow improved but was still passing urine 1-6 every night regardless of fluid intake. On examination his prostrate was smooth and did not feel enlarged. In the last few weeks he has had no symptoms of dysuria and no blood in the urine. Bowels normal. No recent weight loss. I would appreciate your review to manage his symptoms.

Description: See free text

Comment: The above patient was seen in November at Dermatology with psoriasis and was put on the waiting list for UVB treatment.
I understand he was expecting a referral from Stobhill for this as he needs a late afternoon and apparently only Stobhill offers this. I understand you didn't receive a referral letter from GRI and needs a referral for this from his GP. I would appreciate if you could see him and arrange this. Clinic letter attached from Dermatology GRI. Many thanks.

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: Unstable angina

Comment: Thank you for seeing his 67 year old gentleman who was referred in the middle of May this year urgently but hasn't received an appointment yet. He has a history of coronary artery bypass grafting in 2002 and in the last few months has developed symptoms of unstable angina at rest. I refer back to the previous referral which I will attach. He was recently seen at A&E when he was started on Isosorbide mononitrate but he is still having regular chest pain and shortness of breath on exertion and is using his GTN spray approximately four times a day but feels this is worsening. He is a heavy smoker but has reduced this. He currently drives bulldozers at work but has been asked to stop driving since he was seen in May. He had a recent echo which was normal. I appreciate he has been referred two months ago but given the worsening symptoms I would appreciate if he could be seen as soon as possible to avoid any acute episodes.

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: unstable angina occurring at rest.

Comment: I would appreciate if this 66 year old male could be seen on an urgent basis at the Cardiology clinic. He has a history of coronary artery bypass operations dating back to 2003. Recently he has been reporting symptoms of unstable angina occurring at rest. He reports classic chest pain radiating up to his neck, shortness of breath, sweating and palpitations which occur at least once a day. He recently resulted in an A&E admission where he was started on Isosorbide Mononitrate to try control his symptoms at rest.
He drives bulldozers at work and I have asked him to stop this just now given his unstable angina symptoms. He had been a heavy smoke 30 per day but he has reduced this.
More recent examination his HR was regular at 90bpm, chest was clear and his blood pressure was 155/67. Given these unstable symptoms at rest I would be grateful if he could be seen at your clinic. Many thanks.

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: Psoriasis

Comment: Mr Moutrey is bothered by multiple itchy patches of psoriasis for which he has been using Betnovate long term to manage. However current Betnovate and emollients are not effective. He has a friend who previously had light therapy and he is very keen to be considered and wishes to see a dermatologist. I would appreciate your kind review. Thank you.

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: Epistaxis

Comment: The above 61 year old man presents with a two month history of epistaxis from the left nostril. He has no history of injury. He has no other bleeding or abnormal bruising. There does appear to be a specific bleeding spot on the left nasal septum. I treated him with Naseptin cream but thought that he may require cautery. Please note that he will be on holiday from 12 March for two weeks. Many thanks.

/mg

Date/Time: 10-Nov-2022 15:43	**Created By:** Urology Clinical Nurse Specialist - Andrea Reader	**Role:** Nurse - GGC
Specialty: Urology	**Organisation:**	Sensitive

Note:

Attended with wife for review. Well- Frequency and nocturia not as bothersome. Flow remains a problem with occasional urgency. Already on Tamsulosin. Flow test today was slow and prolonged. Complete emptying. Discussed the addition of Finasteride and informed of possible SE. Happy to trial for the next 6 months with repeat flow test thereafter. MRI prostate showed no evidence of malignancy and PSA normal. Given findings on DRE- Consultant apt for re-examination arranged.

IPSS Questionnaire

QUESTION	Over the past month, how often have you_	SCORE
1	Had a sensation of not emptying your bladder completely after urinating?	3.
2	Had to urinate again less than 2 hours after you finished urinating?	2
3	Found you stopped and started again when urinating?	3.
4	Found it difficult to postpone urination?	1
5	Had a weak urinary stream?	4
6	Had to push or strain to begin urinating?	3.
7	Typically had to get up to urinate during the night?	3.
	Total	20

Quality of Life:

If you were to spend the rest of your life with your urinary conditions as it is now, how would you feel?

Referral Symptoms Poor flow, hesitancy, nocturia since May 2021. Jan 2022 Tamsulosin had improved. Nocturia 1-6 continues. °Dysuria.

General Physical Condition Supraventricular tachycardia, T2DM, Gout, Heart failure, Angina, IHD, Psoriasis.

Frequency Volume Chart

NHS Greater Glasgow and Clyde

How to complete the frequency volume chart (FVC)

We use the FVC to asses how often you pass urine during the day and night. It will help your healthcare professional to diagnose and treat the symptoms of your overactive bladder and monitor the effects of treatment.

Please complete the FVC for 3 days in a row and fairly typical days (choose any three days to suit you). Most people find that a Friday and a weekend are the best days for completing the chart. Every 2 weeks fill in a chart for 3 days to check your progress.

You must complete the chart as fully as possible and bring it with you to your next review appointment with your healthcare professional.

What you will need to fill in the chart

You will need a measuring jug to measure the urine you pass. This should be able to measure in millilitres (ml) and should hold at least 500ml.

How you should fill in the chart

- Every time you have a drink, record what type of drink it is, for example coffee, and how much you have had; a cup, mug or can as shown.
- Each time you pass urine you will need to urinate into your jug. This is so that you can measure how much urine you pass. Write down the appropriate amount, for example 150ml, in the correct timeslot in the chart.
- Please also record how urgently you needed to urinate using a scale of 1 to 3 where:
  - **1** = you felt urgency to urinate but you could easily cope with it
  - **2** = you needed to urinate so urgently it interfered with your ability to carry out everyday activities
  - **3** = you needed to urinate very urgently which caused you discomfort and abruptly stopped you from doing an everyday activity
- If you had an accidental urine leak before you could get to the toilet, please indicate **Yes**, as shown in the example line. If not please indicate **No**.

Name of Procedure

Gastroscopy: Endoscopy: Oesophago-gastro-duodenoscopy

Inspection of the upper gastrointestinal tract with a flexible endoscope (with or without biopsy and photography)

Biopsy specimens will be retained.

Statement of Patient

You have the right to change your mind at any time, including after you have signed this form.

I have read and understood the information in this booklet including the benefits and any risks.

I agree to the procedure described in this booklet and on the form.

I understand that you cannot give me a guarantee that a particular person will perform the procedure. The person will, however have appropriate experience.

Where a trainee performs this examination, this will be undertaken under supervision by a fully qualified practitioner.

I understand that any procedure in addition to that named on this form will only be carried out if it is necessary and is reasonable in the circumstances, in relation to the medical treatment proposed, to safeguard or promote physical or mental health.

I would like to have: **local anaesthetic throat spray** ☑
or sedation ☐ (Please tick box)

Have you ever been notified that you are at an increased risk of CJD or VCJD for public health purposes?

☐ Yes ☑ No

Nurses notes

15/01/23 Pt states was told by person that booked his appointment, he was to stop apixaban 2 3 days prior to test and clopidogrel and ramipril 1 wk prior to test. Pt was unsure, thought he stopped clopidogrel on Monday but after much discussion he is sure he stopped it 1 wk ago at the same time as iron tablets. Slow.

15/1/23 (16:00) Patient arrived into recovery post procedure (CB)

Thank you for attending for your endoscopy procedure on: 15/1/25

The clinician who performed your endoscopy was: McGann

You should have received a copy of your endoscopy report to take away with you which contains important information about your procedure. Please speak to a member of the nursing team if you do not have a copy of this.

Your clinician will have explained the next steps after your endoscopy procedure. It is important that you remember the following points if they are applicable to your care.

Next steps in your care	Applicable to you	
	Yes	No
You had biopsies taken or polyps removed during your procedure and you should receive the results in 12 weeks. **If you have not heard about your results after 12 weeks please call: 0141 201 3682**		✓
You need to attend for a repeat procedure in _____ **If you have not had an appointment 2 weeks before this date please call: 0141 201 3682**	For endoscopy to be arranged ✓	
No biopsies taken – follow up to be determined by the clinician who requested your endoscopy		
You do not need any follow up and will be discharged to the care of your GP.		

For staff:

Completed by: CS.

Designation: Nurse

Date: 15/1/25

Consent Form

2206546116 M
MOUTREY 22/06/1954
David
11 Montrose Terrace
Bishopbriggs
Glasgow, Dunbartonshire G64 1J

Patient agreement to colonoscopy investigation

Test: Colonoscopy

Inspection of the lower gastrointestinal tract with *a flexible* endoscope (with or without biopsy and photography) Specimens will be retained.

You have the right to change your mind at any time, including after you have signed this form.

Patient statement

I have read and understood the information in this booklet including the benefits and any risks.

I agree to the test described in this booklet and on the form.

I understand that you cannot give me a guarantee that a particular person will perform the test.

I understand that any test in addition to that named on this form will only be carried out:

if it is necessary;

- is reasonable in the circumstances,
- in relation to the medical treatment proposed,
- and to safeguard or promote physical or mental health.

Have you ever been notified that you are at an increased risk of CJD/VCJD for public health purposes? ☐ Yes ☑ No

(For staff only)

Confirmation of consent (to be completed by a health care professional when the patient is admitted for the test)

I have confirmed that the patient understands what the test involves including any risks.

I have confirmed that the patient has no further questions and wishes the test to go ahead.

Signed: ..... Date: 15/01/25

Name: (print in capitals) SUSANNE LAWSON

Job title: STAFF NURSE

What happens after a Polyp is removed?

Often when large or multiple polyps are removed, the Endoscopist will advise a repeat procedure after a certain timescale to make sure the polyp has not re-grown and that new polyps have not developed. We will write to you about this after your colonoscopy.

After the Colonoscopy

You will be able to rest after the colonoscopy. We will offer you a drink and something to eat. You may feel a little bloated after the procedure as some of the air may remain in your bowel. This may cause some discomfort but will quickly pass

Before you leave the department, a nurse or doctor will discuss results. You will receive a report of your test and we will tell you if you need any medication or further appointments.

Remember, if you had sedation:

- You may not remember the results. If you agree, we will tell your family or friend your results, so that they can remind you.
- You may feel fully alert after your test but as the drug stays in your body for up to 24 hours. You can feel drowsy with lapses of memory. It is important not to drive or drink alcohol during this time.
- You will need to arrange for someone aged 18 years or over to stay with you, or arrange to stay with your family or a friend overnight.

		Referring Cons:	

Indications
Mild anaemia.

Report
The scope was retroflexed in the stomach.
The procedure was completed successfully to D2.
The whole upper gastro-intestinal tract was normal.

Site d: Second part
Specimens: 4x biopsy.

Advice/Comments
Normal Upper GI tract - no cause seen to explain mild anaemia.
D2 biopsies taken to exclude coeliac disease which I expect to return as normal.

Follow up
Awaiting pathology results. No further follow up.

Reported	08-Mar-2024 15:36	Order Number	G207H40706129
Status	Final	Source System	MiSys

XR Chest Final
David Moutrey
Clinical History :

chronic cough. ex smoker. ?lung pathology

XR Chest :
Normal cardiac and mediastinal contour . The lungs are clear.

Reported by: Dr Gregory O'Neill
Verified by: Dr Gregory O'Neill

MRI Pelvis prostate

Performed	03-Oct-2022 07:47	Received	04-Oct-2022 17:20
Reported	04-Oct-2022 17:18	Order Number	G207H38768090
Status	Final	Source System	MiSys

MRI Pelvis prostate Final
David Moutrey
Clinical History :

Enlarged prostate with asymetrical firm right lobe. Normal PSA 1.3. Significant LUTS. ? Prostate cancer

MRI Pelvis prostate :
53 ml gland. PSA density therefore 0.02.

No focal abnormality seen within the prostate to suggest significant malignancy. PI-RADS 2.
Seminal vesicles are normal.
No pelvic lymphadenopathy demonstrated.

Conclusion: No focal abnormality seen within the prostate to suggest significant malignancy.

Reported by: Dr John Morrison
Verified by: Dr John Morrison

XR Pelvis

Performed	15-Jun-2018 08:48	Received	28-Jun-2018 12:19
Reported	28-Jun-2018 12:17	Order Number	G207H33971005
Status	Final	Source System	MiSys

XR Pelvis Final
David Moutrey
Clinical History :
Pain in hips, suspected pathology.

XR Pelvis :
There is some slight loss of joint space within the left hip joint with bilateral osteophyte formation and subchondral sclerosis. The changes are consistent with bilateral osteoarthritis.

Reported by: Dr John Shand
Verified by: Dr John Shand

XR Chest

Performed	21-Mar-2014 10:42	Received	27-Mar-2014 10:41
Reported	27-Mar-2014 10:39	Order Number	G207H28900579
Status	Final	Source System	MiSys

XR Chest Final
David Moutrey
Clinical History :
Interval chest x-ray. Prominent costochondral junction. Ex-smoker of 1 year.

XR Chest :
Sternal wires noted. The cardiothoracic ratio is 137/331. The heart is not enlarged. The appearances at the first costal chondral junction bilaterally are unchanged and felt related to the costochondral articulation rather than pulmonary pathology. The lungs are also otherwise unchanged from previously.

Reported by: Dr Fiona Bryden
Verified by: Dr Fiona Bryden

US Abdomen

Performed	22-Jan-2014 10:27	Received	23-Jan-2014 09:19
Reported	23-Jan-2014 09:17	Order Number	G207H28691188
Status	Final	Source System	MiSys

US Abdomen Final
David Moutrey
Clinical History : Deranged LFTs.

US Abdomen : The liver is generally increased in echogenicity throughout and the impression is of diffuse change possibly fat infiltration. There is no focal lesion identified and no intrahepatic biliary dilatation. There is a small cholesterol deposit in the gallbladder lumen but no gallstones or wall thickening is seen. Normal common duct calibre. The pancreas is obscured by gas. Portal flow is antegrade and the spleen size normal.
The kidneys bilaterally demonstrate mild generalised cortical thinning and irregularity of contour but no focal mass, cyst or calculus is seen and there is no hydronephrosis. Both kidneys measure in excess of 11 cms. The aorta is of normal calibre.

Reported by: Elliot Craig (Sonographer)
Verified by: Elliot Craig (Sonographer)

XR Chest

Performed	14-Jan-2014 11:31	Received	20-Jan-2014 13:33
Reported	20-Jan-2014 13:31	Order Number	G207H28684654
Status	Final	Source System	MiSys

XR Chest Final
David Moutrey
Clinical History :
Cough for 1 year. Cause? Ex-smoker 1-year.

XR Chest :
There are no previous x-rays for comparison. Median sternotomy sutures noted. Cardiac size is within normal limits. Normal mediastinal contour. The anterior aspects of both right and left first ribs are conspicuous and appearances are felt to represent a prominent costochondral junction on each side. However, in view of the clinical details it would be prudent to perform follow-up chest x-ray in approximately 8-week to absolutely exclude a possible lesion at the site of the left costochondral junction. There is a generalised increase in lung markings which probably reflects a smoking history but otherwise lungs are clear.

Reported by: Dr Rhona Stevens
Verified by: Dr Rhona Stevens
