Dear Sir/Madam

Miss Wendy McLeish, Flat 0/1, 51 Coxton Place, Glasgow, G33 5EJ
Date of Birth: 25 May 1987
Road Traffic Accident: 8 July 2009

We act for your patient, Wendy McLeish in connection with a claim for compensation which she is pursuing following her accident on 8 July 2009. For the purposes of the claim which we are pursuing on Miss McLeish's half we wish sight of any medical records you hold relating to her.

Miss McLeish has signed a mandate requesting that you provide us with copies of her records and this is enclosed.

We would be obliged if you could have Miss McLeish's records copied and sent to us. We undertake to be responsible for your charges.

Yours faithfully

Consent form for access to patient records by solicitors
(Releasing health records under the Data Protection Act 1998)

About this form

In order to proceed with your claim, solicitors usually need to see all your records as they need to assess which parts are relevant to your case. (Past medical history is often relevant to a claim for compensation.) Also, if your claim goes ahead, the person you are making the claim against will ask for copies of important documents, including health records. So your solicitor needs to be familiar with all your records. However if only part of the record is needed, this protects your privacy and reduces NHS photocopying costs. These records may be held either by your GP or the hospital(s) and you will need to apply for these separately.

Part a – your, the health professionals' and your solicitor's or agent's details

Your full name Include Forename, Middle Name, Surname, Previous Surname when attended hospital	WENDY McLEISH
Sex	FEMALE
Hospital number or CHI (community health index) number (if known)	
Your address/ address when you attended hospital (if different):	51 COXTON PLACE GARTHAMLOCK GLASGOW G33 5EJ
Date of Birth:	25/5/87
Date of Incident	8/7/09
Solicitor's or agent's name and address:	DALLAS MCMILLAN REGENT ST G2 2QZ
GP's name and address (and phone number if known):	DR BURTON WOODSIDE HEALTHCENTRE. 531 9550
Name (and address if known) of hospital(s) and departments you went to in relation to this incident :	GLASGOW ROYAL INFIRMARY WARD 57.
If you have seen any other person or organisation about your injuries (for example, a physiotherapist) or have had any investigations (for example, Xrays) please provide details:	

Part b – your declaration and signature

Please see the 'Notes for the client' over the page before you sign this form.

To health professionals

I understand that filling in and signing this form gives you permission to give copies of all/~~part relating to this incident~~ of my GP records, or all/~~part relating to this incident~~ of my hospital records (delete words which do not apply) to my solicitor or agent whose details are given above.

Please give my solicitor or agent copies of my health records, in line with the Data Protection Act 1998, within 40 days.

Your signature: W. McLEISH Date: 17/7/09.

Part c – your solicitor's or agent's declaration and signature

Please see the 'Notes for the solicitor or agent' over the page before you sign this form.

To health professionals

I have told my client why particular parts of his or her health records are needed. I confirm that I need the full/~~part (Specify which.....~~) records in this case ~~from (Specify dates.....~~). ~~enclose~~ please advise the authorised fee for getting access to records.

Re: Ms Wendy McLeish 25/05/1987; CHI: 2505876061; 0/1 51 Coxton Place Glasgow G33 5EJ

This young lady was reviewed in clinic today. Her cast was removed. X-ray review showed good healing of the right distal radius fracture. On examination the patient had good active and passive movements around the wrist but she was feeling a bit stiff. There was no swelling bruising or deformity. Neuro vascular intact. Patient was advised to take some regular pain relief. She was also advised to mobilise her wrist slowly and gradually. She was discharged from clinic.

Yours sincerely

PP

Re: Ms Wendy McLeish 25/05/1987; CHI: 2505876061; 0/1 51 Coxton Place Glasgow G33 5EJ

I say Wendy today back at the clinic a week since her k-wiring of her right wrist. The overall position has been well maintained and we will change the cast to a lightweight cast today.

She will return in 3 weeks time for removal of a cast and removal of wires and application in front of the cast for 2 more weeks.

We will let you know how we get on in due course.

Yours sincerely

Any old injuries/illnesses that are not declared and reoccur whilst on expedition will not be covered by Raleigh's insurance.

This health history is correct to the best of my knowledge. In the event of illness or accident on my expedition, I hereby give permission for Raleigh International medical or other expedition Staff to initiate medical treatment and inform my next of kin in case of hospitalisation.

Candidate's Signature: W McLeish **Date:** 19/3/07

IF *ANYTHING* TO DO WITH YOUR PHYSICAL OR MENTAL HEALTH CHANGES AFTER RETURNING THIS FORM, YOU MUST INFORM THE MEDICAL COORDINATOR AT HEAD OFFICE.

[redacted]

[redacted]

This section to be completed by Family Doctor/Physician who has access to patient's medical history

The above named person will be participating in a Raleigh International expedition of ten weeks duration, during which he/she will be subject to basic living conditions, harsh physical and mental stress as well as extremes of climate.

These demands will involve back packing, being able to carry weights of up to 20kg, and being fit enough to trek in conditions which will involve possible extreme temperatures, climate, altitude changes and rough terrain. Projects will vary from on the move to static project sites. These will provide very basic facilities, such as long drop toilets and primitive washing facilities, and they will be living under canvas or the stars.

The diet provided will be dehydrated food and fresh vegetables or fruit, when available, this being cooked on open wood fires. Raleigh International aims to provide a Medic (Doctor/Nurse) on each project site to give immediate first aid and ensure high hygiene standards are taught and maintained. The project site can be a considerable distance from any hospital back up.

With the above information, if there are any matter of which you feel the Medical Staff should be aware, please supply on a separate sheet. If you require further details please contact the Medical Co-ordinator on 0207 371 8585: Ext. 140.

have read the above paragraph and agree that the candidate's medical details are correct. Based upon notes in my possession in my opinion this patient is fit and healthy, mentally and physically, and able to participate in a Raleigh International expedition.

Doctor's Signature: Una Houston Date: 20/3/17.

Doctor's Name (in capitals): FIONA HOUSTON.

DOCTORS STAMP & GMC NUMBER
GMC - 6056120.

Address: WOODSIDE HEALTH CENTRE.
BALL ST.

Additional information on above patient should be attached securely to this sheet.

THIS FORM MUST BE SIGNED BY A DOCTOR & RETURNED TO YOUR EXPEDITION CO-ORDINATOR AT HEAD OFFICE BY.
IF IT IS NOT RETURNED BY THIS DATE YOU MAY WELL LOSE YOUR PLACE ON EXPEDITION.

Mr J Roberts New Fracture Clinic – 11 August 2006

This patient was reviewed today in the fracture clinic. A car ran over her foot 2 days ago. She has been complaining of left sided heal pain since.

On examination there is slight swelling in the lateral aspect of the heal. She is tender mildly around the calcaneus. Her ankle is non-tender and has a full range of movement. Remainder of the foot is non-tender. She does not appear to have sustained any significant soft tissue or crush injury. There is no neurovascular deficit. Achillies tendon is clinically intact.

X-ray perhaps reveals a calcaneal spur fracture.

A tubi grip has been provided and the patient has been provided and the patient has been encouraged to mobilise as her symptoms allow. She has been discharged from the clinic.

MM/DF/23123532

Yours sincerely

Dear Dr. MacKelvie,

Re. Wendy McLeish, D.o.B. 25.5.87. (Unit No. 10606785)
70 Wallacewell Quadrant, Glasgow, G21 3PX.
Diagnosis: Acne vulgaris
Action: Duac gel
Consider stopping Dianette
Follow up: Discharge

I reviewed Wendy. Her acne has improved considerably on Dianette and she stopped the Minocin. I have explained that she probably could not remain on Dianette as there are new guidelines about this therefore I have added in Duac gel with a view to stopping her Dianette. One alternative to consider would be Yasmin if she is requiring oral contraception.

Yours sincerely,

Heather Graham

Dr MacKelvie
Springburn Health Centre
200 Springburn Way
GLASGOW
G21 1TB

Dear Dr MacKelvie

WENDY MCLEISH 7 WALLACEWELL QUADRANT GLASGOW G21 3NJ
DOB 25/05/87

Wendy was seen in the fracture clinic following an injury to her right ankle following an incident when she kicked full beer bottle. She was aware of pain over the anterior aspect of the right ankle. She has no tenderness in this area today, and has no pain on ankle dorsi flexion. There was some discomfort with full plantar flexion, but her movements were restricted.

X-rays have been interpreted as showing a fracture, but on balance I think that the appearances are not suggestive of the remnants of the epiphyseal scar of the distal tibia and a fracture is therefore most unlikely. She has been provided with a tubigrip support at this stage, and left free to mobilise without splintage. I would anticipate the effects of the injury settling completely over the next 10/14 days. She has been discharged from the fracture clinic back to your care.

Yours sincerely

Mr E F Wheelwright
Consultant Orthopaedic Surgeon

FILING
30 DEC 2003

Dear Dr. MacKelvie,

Re. Wendy McLeish, D.o.B. 25.5.87. (Unit No. 10606785)
70 Wallacewell Quadrant, Glasgow, G21 3PX.
Diagnosis: Acne vulgaris
Management: Minocin, Differin and Dianette
Review: Six months

I reviewed Wendy in our outpatient clinic today. Her acne has improved slightly with the Minocin and Differin.

On examination today she has some comedones and small pustules over her cheeks, chin and forehead. The overall picture is still of a very mild acne. We discussed further treatment today and she was keen to try Dianette. I would advise that she add this into her regime. She does not appear to have any contra-indications to using Dianette so I have asked her to attend you for this prescription explaining that she must have her blood pressure checked before going on this. I also advised her that this should only be continued for six months as per the recent guidelines. She could continue the Minocin for a further few months to see if there is any further improvement but if she decides to stay on it for any longer than six months she should have bloods checked. We plan to review her in six months time.

Many thanks.

Yours sincerely,

Sheena Fraser

DR. CLARK'S CLINIC

Dr. C.S.S. MacKelvie,
Springburn Health Centre,
Springburn Way,
Glasgow,
G21 1TR.

Dear Dr. MacKelvie,

RE: Wendy McLeish, D.o.B. 25.5.87. (Unit No. 10606785V)
70 Wallacewell Quadrant, Glasgow, G21 3PX.
Diagnosis: Acne vulgaris – face – mild to moderate
Treatment: Differin gel nocte
Minocin MR od.
Follow up: Three months

This 16-year-old girl has an approximately three year history of facial acne. She has tried many topical treatments but has not yet received an adequate trial of an oral antibiotic. In the first instance we should therefore treat her with a topical treatment such as Differin gel and antibiotics such as Minocin MR. This should be taken for at least three months. If there are side effects with the Minocin MR, then she should try another antibiotic such as Erythromycin. If this treatment does not work then we will consider Dianette as she appears to have no contra-indications to this treatment and if this does not work then we will consider Roaccutane therapy. We will review her back in the clinic in three months to see how see has got on.

Yours sincerely,

Ann Sergeant
Senior House Officer

Dear Doctor

This girl has had a number of preparations for her acne, which at present is mainly facial and upper chest front plus upper arms.

Unfortunately her acne seems to be at present aggravated by Tetralysal and I am concerned now about the possibility of permanent scarring. I would appreciate your advice once seen.

Many thanks

Yours sincerely

Dear Doctor

I would be very grateful if you could arrange a formal hearing test on this 15-year-old girl. She presented with the Carer from her home and they both expressed concern about her hearing. Her Carers are particularly worried that she seems to be missing most conversations that go on around her. They describe that she is fine on a one-to-one basis but in a room full of people, doesn't appear to hear what is being said to her. They also comment that Wendy speaks very loudly.

There have, however, been no reports of problems at school.

Wendy herself appears quite anxious about the possible hearing loss.

I am a little uncertain about possible other agendas behind this request but would be grateful for an assessment (there was no obvious deficit at examination).

Thank you

Yours sincerely

FIONA E. HARRIS Dr.

Dear Sir/Madam

Re: WENDY McLEISH (d.o.b.25.05.87)
70 Wallacewell Quadrant, Glasgow G21 2PX

I am writing to confirm that the placement at Fern Towers that has been made for the above named patient is appropriate.

Wendy would benefit from help with anger management.

I thank you for your interest in my patient and hope that the outcome is beneficial.

Yours faithfully

Fiona E. Harris Dr.

Dear Caroline

We have received a letter following your recent visit to the Gynaecology Clinic.

They have recommended that your smear test be repeated in six months and I would be grateful if you could make an appointment to have this done in July.

Yours sincerely

Dear Dr Ali

Caroline McLean, d.o.b. – 11.4.57
0/2, 25 Victoria Street, Glasgow G73

Further to Dr Zwizwai letter, this lady's endometrial biopsy was normal and her smear classified as borderline.

I wondered whether Femoston 2/10 if her periods remained a problem would be worthwhile trying. She may require Mefanamic Acid with her periods for her dysmenorrhoea.

Her smear should be repeated in six months time.

Kind Regards

Yours sincerely

Dr J H Kennedy

Dear Colleague ,

Re : Wendy McLeish - D.O.B.- 25 / 05 / 87
67 Bute Towers , Cambuslang , Glasgow , G72 8YR

As you will know Wendy has been attending the Department of Child & Family Psychiatry for some time now. Her situation in life of course has changed again in the recent past and after discussion amongst the team we think it would a useful moment to meet with the other agencies involved in this case in order to discuss the department's involvement with Wendy and the respective roles of the other agencies involved with this child.

We would therefore like to suggest a meeting on **Tuesday 3rd November 1998 at 11.30 am** in the Department of Child & Family Psychiatry at Possilpark Health Centre. We would envisage that this meeting would take 1 - 1½ hours.

We do hope that you will be able to manage to attend for this meeting and look forward to seeing you then. Please contact us at the above number if you wish to discuss this further.

Yours sincerely,

pp

Dear Dr Caven

Re: Wendy McLeish d.o.b 25/05/87

I have enclosed a copy of the minutes of the meeting held at Bridgeton Child Development Centre on 15th December 1997. As you can see I intend to withdraw and will only become re-involved if asked to do so. Wendy has not been soiling for about 18 months. In spite of this I would recommend that the Lactulose Syrup be maintained at the present dose for another 6 months and then gradually tailed off. Thank you for your help.

Yours sincerely

Dr Sandra E Evans
Consultant Community Paediatrician

[redacted]

REVIEW MEETING OF 15TH DECEMBER 1997
Held at the Child Development Centre, Bridgeton Health Centre

SUBJECT: **Wendy McLeish**

D.o.B. **25/05/87**

Present:
Mr McLeish
Margaret Deighan, Health Visitor
Norma Wilson, Social Worker
Iain Brooksbank, Social Worker from DCFP
Dr S Evans, Consultant Community Paediatrician

Apologies:
Dr Caven, General Practitioner
Mrs Craig, Teacher
Jane Elwood, Psycho-therapist
Susan Rigmond, Crossroads Representative

Mr McLeish opened the meeting by stating that Wendy's soiling had not recurred. She is taking her medicine regularly. She has responded well to having Maggie, family friend staying with them in the home until just 3 weeks ago. Unfortunately Maggie has now moved on to her own tenancy, but the children have been staying with her this last weekend and hoped to do so on many other occasions in the future. Wendy has been less cheeky than in the past, but there had been an episode a few weeks ago when neighbours approached Mr McLeish complaining that Wendy had been bullying their children. Mr McLeish had spoken to Wendy about this and had also spoken to the school. There have been no further complaints and he hopes the problem has been resolved.

Norma Wilson - reported that Maggie's presence in the house had made a great difference. Not only is the house decorated and furnished to a much higher standard, but that the female presence had made a great deal of difference for Wendy. The respite breaks for the family had stopped because of Maggie's presence in the house, making them unnecessary and it is hoped that contact with Maggie will be maintained by overnight stays at the weekend. If this does not occur then Norma will look at the possibility of respite breaks being restarted in the new year.

Norma sees Wendy every Wednesday and this is still going well. Wendy appears to enjoy their chats and certainly enjoys going along to see Jane Elwood, Psycho-therapist at Glenfarg Suite.

Wendy has grown up a great deal, not only physically, but her behaviour is more mature. She attended the I.T. Holiday Programme in the summer and appeared to enjoy this. Norma had also completed the work with Wendy about inappropriate touching etc., and prepared Wendy for puberty. This was done with the back-up of Maggie and appears to have gone very well.

[redacted]

Margaret Deighan, Health Visitor has now reduced her input. She still sees Wendy on an intermittent basis and keeps in contact, but Wendy is no longer looking for very frequent contact. Medication is still prescribed regularly and collected and is presumably being taken regularly. Wendy has had treatment for head lice and scabies, but both were promptly treated properly. Margaret felt that her future role would diminish further, but that she aims to keep in contact with Wendy for some time to come on a very intermittent basis.

Iain Brooksbank was able to say that Wendy will still be seeing Jane Elwood on a regular basis. Jane still feels that there is a lot to do with Wendy. She still relates indiscriminately and needs work on forming deeper relationships. She is frightened about ending this and some discussion took place about the need for gradual decrease of involvement by professionals. It was generally agreed that Wendy appeared to be gaining a great deal from the sessions with Jane.

Sadie from Crossroads is still visiting every morning and 2 afternoons a week. This appeared to be a stable regular contact for Wendy. Some discussion took place about young Gerry, who also appeared to be doing well at the moment. He is attending I.T. Group and there had only been the one really problematic incident at the school in the last 9 months. It was also noted that Mr McLeish's health had appeared to have improved recently, but Mr McLeish himself feels that his health fluctuates a great deal.

Decisions

Wendy had not been soiling for 18 months. This no longer appeared to be a problem, although Dr Evans recommended that medication should continue for another 6 months before gradually tailing it off. It was apparent that Wendy had responded to all the input from the different agencies and that it was now clear that the focus of work with Wendy in the future would be in developing her own identity and her ability to form deeper relationships. The Professionals most likely to be involved would be Norma Wilson, Social Worker and Jane Elwood, Psycho-therapist. In view of this it was decided that:-

1. Dr Evans would now withdraw and would only become re-involved if needed.
2. Multidisciplinary reviews would be called when necessary by Norma Wilson.
3. Norma Wilson would continue to see Wendy weekly.
4. Wendy would continue her contact with Jane Elwood on a regular basis.
5. It was hoped that Crossroads input would continue.
6. Margaret Deighan, Health Visitor, to keep in touch on an intermittent basis.
7. Dr Evans to write to Dr Caven re; medication.

MEETING OF 10th JULY 1997
Held at the Child Development Centre, Bridgeton Health Centre

SUBJECT: Wendy McLeish

D.o.B. 25/05/87

Present:
Margaret Deighan, Health Visitor
Norma Wilson, Social Worker
Irene Anderson, Senior Social Worker
Iain Brooksbank, Social Worker from DCFP
Jane Elwood, Psycho-therapist
Dr S Evans, Consultant Community Paediatrician

This meeting of involved professionals was convened because of continuing concerns about Wendy's home situation and concern about Mr McLeish's deteriorating health. It was also convened to discuss Wendy's behaviour in the therapy sessions with Mrs Jane Elwood.

Irene Anderson has known the family since Wendy was born and spoke about the issues of her mother's alcohol abuse and prostitution. Although Mr McLeish has always taken the role of Wendy's father, he is unlikely to be the natural father, Wendy appearing to be semi-Asian. Wendy experienced early physical abuse and has obviously undergone traumatic experiences including seeing her mother's death.

Norma Wilson gave an update on the present conditions. Wendy appeared to be developing a trusting relationship with Norma. She has begun to confide, telling Norma about things that her father has specifically told her not to say anything about. Because of this Norma knew that a middle aged woman called Maggie had moved into the house. Maggie's surname is not known. She is believed to have been an ex-neighbour. Her exact role in the house is unknown, but the house is now reported to be much cleaner, brighter, with new furnishings etc. Margaret Deighan reported that this lady had attended the surgery for medication for head lice and stated quite clearly that she had now moved into the house and was staying there.

Wendy had also confided that her dad was attending the chemist every day for daily medication.

Jane Elwood reported that she had been seeing Wendy for individual psycho-therapy since before Christmas. Wendy has very little sense of identity. She always tried to fit in with whatever she thought might be expected of her. Where she could not do this in psycho-therapy sessions, she became quite disturbed and distressed. Jane reported that Wendy also needed to bargain with people. She would offer to do something for you if you did something for her. The meeting reflected that this and the need for secrecy and the need to keep things from "snoopers", such as social workers and other professionals has been part of Wendy's life.

Recently the sessions have become very disturbing with Wendy producing very sexualised behaviour. She appeared to be producing this behaviour being under the impression that this would interest Jane. She pulls down her pants and has actually masturbated in the session. Although the sessions are often so difficult, Wendy is reluctant to end the sessions and will have temper tantrums when it is time to go.

Norma reported that sexualised behaviour in the children has been noticed in the past and that previously they had been known to play the "shagging" game. There had been an incident while the children were at respite care. Wendy had approached a neighbours little boy and overheard asking to see his private parts saying that she would then show him hers. This was nipped in the bud by the carer. Norma has now started work with Wendy about inappropriate touching etc., and starting to prepare Wendy for puberty and menstruation. This was proving to be difficult. Mr McLeish had welcomed Norma's suggestion that she should start to prepare Wendy for puberty.

Margaret Deighan reported that when she visited the house and was working on a toiletting programme, Wendy always wanted he back rubbed and tickled. She also did this with Sadie, the Crossroads worker and Margaret stated that she had not always felt comfortable with this and needed to share the information. In general people felt that it was probably quite natural for Wendy to enjoy such a physical contact in view of her emotional deprivation.

Discussion took place with everyone expressing concerns about the life experiences Wendy had undergone and may still be undergoing. It seems likely that Wendy may have been sexually abused in the past or at least has witnessed inappropriately adult sexual behaviour. There is some concern that abuse may be occurring at present since many different friends of Mr McLeish visited the house regularly. However, Wendy has not made any disclosure of sexual abuse, so that although everyone present had concerns, there did not appear to be any action that could be taken on this point at the present time.

There was also discussion about the concern that Mr McLeish's health was deteriorating and that he did not appear to be acknowledging this or preparing the children in any way.

There was also discussion about the concern that there was no overt acknowledgement that Mr McLeish was not Wendy's natural father and that Wendy needed to explore this area at some point.

Decisions

1. Jane to continue psycho-therapy and Norma to continue her work with Wendy. Norma and Jane to work closely together.

2. Preparations to be made on the presumption that Mr McLeish's health is likely to deteriorate further.

3. Norma to ensure that Mr McLeish had in fact been married to Wendy's mother and to make checks about any possible extended family in the area.

4. Dr Evans to contact Dr O'Neil, Mr McLeish's general practitioner.

5. Norma to identify "Maggie", and clarify her position in the household and perform a police check.

Dr Sandra E Evans
Consultant Community Paediatrician

Date: 14/7/17

REVIEW MEETING
Bridgeton Child Development Centre
16th June 1997, at 2.00 pm

Re: Wendy McLeish D.o.B. 25.05.87

Present: Margaret Deighan, Health Visitor
Dr Caven, General Practitioner
Norma Wilson, Social Worker
Susan Rigmond, Crossroads
Mr McLeish, Wendy's father
Dr Evans, Consultant Community Paediatrician

Apologies: Mr Iain Brooksbank, Social Worker
Mrs Jane Elwood, Psycho-therapist
Elizabeth Maighan, Respite Carer
Helen Burns, Link Worker
Mrs Craig, Teacher

Dr Evans commenced the meeting by outlining information received from Mrs Craig, Wendy's class teacher, who had sent her apologies.

Wendy had been attending school punctually and appeared to be very well looked after, being neat, tidy and clean, and there was no hint whatsoever of soiling. Her behaviour was however causing some concern in school. She had become very chatty in class and insolent to adults. She had been involved in playground incidents and could be rather aggressive and arguementative with her peer group.

Mr McLeish

Mr McLeish stated that Wendy's behaviour at home could be difficult also. She had become very cheeky towards adults and that he had noticed this particularly over the last month or so. She could always be cheeky towards himself, but now he noticed that she could be insolent towards other adults. He had no concerns about her toileting now. There had been no soiling whatsoever and she took herself to the toilet regularly.

He reported that he found the numerous professional visitors to the house very intrusive, but realised that it was in the interest of the children. He reported that as well as receiving regular visits from Crossroads worker, Sadie and Margaret Deighan, Health Visitor and Norma Wilson, Social Worker, young Jerry now had an IT worker, who visited twice weekly on Tuesdays and Thursdays and a befriender, who visited once a week.

Dr Caven

Dr Caven had been seeing Wendy for routine abdominal examinations. Her abdomen was always soft and there was no evidence of a loaded colon. She regularly prescribed Lactulose and Senokot and will continue to do this, but it is agreed that it is no longer necessary to continue the 3 monthly abdominal examinations. She remarked that Wendy had been perfectly well behaved, but she noted that she was far more confident child than in the past.

Margaret Deighan

Margaret Deighan had continued to visit Wendy every 2 or 3 weeks. There were no longer any problems with toileting or cleanliness. She had stopped the star chart some time ago. Wendy still appeared to look for her visits, so that she intended to scale them down to about once 6 weekly in the future.

Susan Rigmond

Suan Rigmond from Crossroads reported that Crossroads Worker Sadie continued to visit the household in the mornings, helping to ensure that Wendy took her medication and that she was ready for school. Wendy had developed a very good relationship with Sadie. There had been no behaviour problems and Wendy had not been cheeky at all. The relationship was a very positive one indeed. Sadie continues to visit one afternoon a week for half an hour. It was agreed that this would continue.

Norma Wilson

Norma Wilson reported that she visited Wendy's home once a week on a Wednesday, took her to MacDonald's, then took her to see Jane Elwood, Psycho-therapist at Possilpark Health Centre. This has been going very well and had been quite positive. Wendy was also taking part in out of school activities in that she had joined a club in Easterhouse, which she attended 2 evenings per week. She was taken and returned to the house by a friend's mother. This was welcomed by everyone present.

Norma also reported that both children had been spending weekends every 6 - 8 weeks or so with a respite carer, Mrs Maighan. This had generally been going very well, although Wendy's behaviour has been quite difficult on one occasion. It has been noted that during respite Wendy always tried to put down her brother and to control situations and other children.

Decisions

1. Dr Caven will continue to prescribe Lactulose and Senokot, but will discontinue 3 monthly abdominal examinations.

2. Margaret Deighan to visit 6 weekly.

3. Crossroads involvement to continue.

4. Wendy to continue to attend psycho-therapy seesions with Mrs Jane Elwood, and to be accompanied there by social worker Norma Wilson.

5. Out of school activities to continued and encouraged. Holiday care at the local community centre to be looked into for school holidays for both children.

6. Respite weekends to continue.

7. Dr Evans to contact Mrs Elwood and Iain Brooksbank, particularly in view of behaviour concerns re; Wendy.

8. Review meeting scheduled for December 15th, at 2.00 pm, at Bridgeton Child Development Centre.

Consultant Community Paediatrician

FUND
2074

Apologise
Dear Dr Lobb

Minutes - Review Meeting
Bridgeton Child Development Centre

Date of Review Meeting: 02.12.96 at: 2.00 pm

Subject: **Wendy McLeish**
Date of Birth: **25.05.87**
Address: **46 Lamlash Crescent, G33**

Present: **Mr McLeish (Wendy's father)**
Norma Wilson, Social Worker
Iain Brooksbank, Social Worker from DCFP, North Team
Joyce Carroll, Crossroads Representative
Margaret Deighan, Health Visitor
Jane Elwood, Psycho-therapist (joined meeting late)
Dr S E Evans, Consultant Community Paediatrician

Apologies from: **Dr Caven**

It was noted that a letter of notification of the meeting was not sent out to the school, this will be remedied for the next review meeting and Dr Evans undertook to contact Wendy's school teacher, Mrs Fiona Craig to discuss the present school situation.

Dr Caven has spoken to Dr Evans on the telephone. She was pleased about the lack of soiling and the fact that there has been no build-up of faeces in the descending colon. She still expressed some concerns about Wendy's situation and the fact that she has been sent home from school twice, because of unexplained fainting episodes.

Mr McLeish reported that his own health was poor. He has cut down smoking, but has great difficulty breathing first thing in the morning. He is very pleased at Wendy's progress and feels that she is doing well. The soiling more or less stopped very soon after the regime was instigated. There is some very slight soiling just occasionally. Wendy seemed happy in school and was well behaved at home. He expressed a lot of concern about Gerry's behaviour, but does not feel that Wendy's behaviour is a problem in any way.

Norma Wilson explained that Crossroads worker was going to the house every morning and for four afternoons a week. Arrangements have been made for Wendy to use the toilet in school at lunch time and this has worked out well. There is still some concern that Wendy was not getting out to socialise as much as she could be, but Norma herself was taking her out on a weekly basis. Both children have been to foster parents for a weekend respite break and this has gone very well indeed. Norma is hoping to arrange another such weekend. At the present time she is trying to identify a befriender for Wendy. All present considered this to be a very good idea. Joyce Carroll suggested that Norma should look into the after school care situation in the area.

Joyce Carroll then described the Crossroads input and in particular the fact that Wendy appeared to have quite a close relationship with Sadie, the main worker involved. Both children seemed to get on very well with Sadie. Sadie has known the children for two and a half years. Because of the improvement in Wendy's soiling has been consistent for quite a while, it was now considered possible to reduce four afternoons to one afternoon a week, but Sadie would continue to go into the house every morning at present. This was generally approved. Although it was acknowledged that Mr McLeish finds the presence of so many people visiting the house intrusive, he also acknowledged that this service seemed to be of benefit to Wendy.

Iain Brooksbank reported that he had been unable to start work with Mr McLeish on handling issues and that this is now becoming important and because of Gerry's behaviour difficulties both at home and in school. Mr Brooksbank announced the intention of starting sessions as soon as possible.

Health Visitor Margaret Deighan, described the dramatic improvement in Wendy's soiling and explained that the improvement had been maintained. She was still visiting the house once weekly and now intended to reduce these visits to once twice weekly. Wendy is taking lactulose syrup very regularly and was attending Dr Caven for physical examination regularly.

Jane Elwood joined the meeting late, but described her involvement with Wendy as being now on a weekly basis. The sessions were still at a very early stage, but were promising. She saw her role as helping Wendy with her emotional development.

Decisions

Norma Wilson

1. To endeavour to identify befrienders for both Wendy and Gerry.
2. To set up another respite weekend for the children.
3. To seek after school facilities which may afford Wendy more evening socialisation.

Crossroads

1. To continue to visit five mornings per week.
2. To cut afternoon visits to one afternoon per week.

Health Visitor Margaret Deighan

1. To cut her visits to one visit per two weeks.
2. To continue to ensure that Wendy sees Dr Caven at 2 monthly intervals.

Dr Caven

1. To continue to provide prescriptions for lactulose syrup and senna.
2. To continue to check progress at 2 monthly intervals.

Mr Brooksbank

To work with Mr McLeish on child behaviour management and discipline issues.

Jane Elwood

To continue weekly psycho-therapy sessions with Wendy.

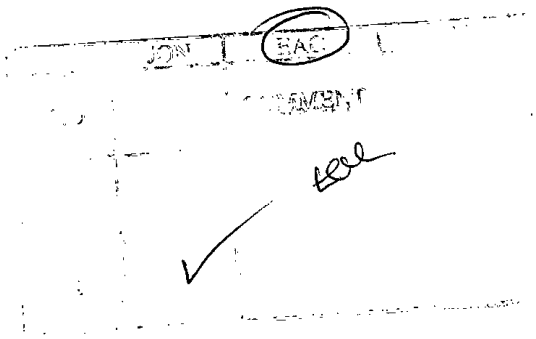
It was acknowledged throughout the meeting that Mr McLeish's health was very poor indeed and that he was having difficulty coping with Gerry in particular.

A review meeting will be called in June 1997.

Dr Evans stated that she will not be seeing Wendy personally as all issues appeared to be being addressed adequately, but should any concerns arise, she could be contacted.

P.S.

Suggested diary date for review meeting:- 2.00 pm, Monday 16th June 1997 at Bridgeton Child Development Centre.



Minutes of Case Review
held at Bridgeton Child Development Centre
on 2 April 1996 at 9.30 am

Subject of Review: **Wendy McLeish**
Date of Birth: **25.05.87**
Address: **930 Carntyne Road, G32**

Present:
Mr McLeish (Wendy's father)
Ms Norma Wilson, Social Worker
Dr Caven, General Practitioner
Ms Fiona Craig, Class Teacher
Dr Kate McKay, Consultant Community Paediatrician
Mr Iain Brooksbank,Social Worker at Child and Adolescent Psychiatry, Possilpark Health Centre
Ms Margaret Deighan, Health Visitor

Mr Brooksbank gave a brief resume of the history of Wendy's problems. There have been social problems in the family and Wendy's mother had died in 1991. Since then the family have been cared for by Wendy's father, Mr McLeish, who has health problems of his own. Wendy had spent a period of 18 months in care at one point. She had been soiling, at least since 1991 and has been attending Dr T J Evans, Gastroenterologist, Royal Hospital for Sick Children. He established that the faecal retention with soiling was not due to any physical cause, but emotional causes and Dr Evans had made a referral to the Department of Child and Adolescent Psychiatry at Possilpark. Mr Brooksbank and the psycho-therapist had attempted to make contact with Wendy and her family on several occasions and these have been unsuccessful in the past. A referral had also been made to Dr Kate McKay, Consultant Community Paediatrician at Possilpark Health Centre, who had seen Wendy on 2 occasions. She reported that Wendy was a bright little girl, who now had a real fear of defecation. When she had examined her, there was loading of soft faeces and Dr McKay had organised a visit from Home Care Nursing Staff to perform an enema. The nursing sister had had difficulty gaining entry to the house and when she eventually did so, she did express some concerns about the home circumstances.

Mr McLeish described Wendy's soiling problem and expressed his difficulties in dealing with this in any way as a single father. This difficulty was acknowledged by all present. He also expressed some difficulties in disciplining the children and his very real concerns when they went out to play. It is evident that these concerns resulted in the children frequently being "grounded" and being kept in doors a great deal.

Norma Wilson confirmed that she would now be the main social worker consigned to the family and expected to be working much more closely with Mr McLeish and Wendy in the near future. At the present time, the family are visited by a worker from Crossroads every morning, who helped Wendy clean herself and saw that she was properly dressed and went to school.

Ms Wilson expressed her eagerness to work with other professionals to help Wendy.

Mrs Fiona Craig, Wendy's teacher then described Wendy as being a bright and happy little girl at school who is popular and mixed well with her peers. Although an odour was sometimes detectable, this was apparently infrequent and certainly Wendy was not the "butt" of her classmates. Wendy stayed in to school dinners and there is an auxiliary at the school.

Dr Caven had known Wendy from approximately the age of 5 years. She found her to be a bright, attractive little girl. Present medication is 10 mls lactulose Bd., 10 mls of Senna Bd., but there was some concern that the medication had not been taken regularly in the past.

Health Visitor, Margaret Deighan stated that she had only been involved since just before Christmas 1995. However, she was very willing to work with other professionals to help Wendy.

It was generally agreed that Wendy had severe emotional problems. It appeared that during her period in care the soiling had improved somewhat and that she had reacted well to having the security of a mother figure. There is also general concern about the number of people involved with Wendy, and an acknowledgement that it is difficult to reduce this number since Mr McLeish found it difficult to work with Wendy over the toileting issue as a single father.

Decisions

Norma Wilson:-

1. To explore the possibility of a worker to visit the family daily after school (preferably the same Crossroads Worker as in the morning).

2. To develop a relationship with Wendy.

3. To personally escort Wendy to sessions at psycho-therapist at Possilpark Health Centre.

4. Seek out after school activities for Wendy eg, Brownies, various clubs etc.

Mr Brooksbank:-

1. To organise psycho-therapy sessions at Possilpark Health Centre

2. To work with Mr McLeish on Child Behaviour Management and discipline issues.

Health Visitor, Margaret Deighan to instigate toileting programme:-

1. Preparing Wendy .
2. Preparing workers visiting the home twice a day.
3. Preparing the school auxiliary.
4. Visit Wendy once a week at home to give encouragement and record progress.
5. Active links with Dr Caven.

Dr Caven:-

1. To provide prescriptions for Lactulose Syrup and Senna (Health Visitor to ensure that these reach the home), and appropriate ointment for anal region.
2. To check on progress at 2 monthly intervals, to ascertain whether an enema is necessary.
3. Enema to be arranged with District Nurse or Home Care Nurse and visit the health visitor when necessary.

It was acknowledged that arrangements would be complex and that Mr McLeish would need help from Norma to deal with the intrusion at home, and the intrusions in his life-style. It was also acknowledged that the plans could not be instigated immediately, but would depend upon Norma Wilson arranging after school visitor etc.

Dr McKay felt that all should be arranged locally, and that she would now be withdrawing. Dr Evans would not at this point be seeing Wendy personally, since there are so many people involved already, but will review the situation in approximately 4 months time.

25 March 1996

Dr James O'Neill
Lightburn Medical Practice
Carntyne Road
GLASGOW

Dear Dr O'Neill

Wendy McLeish - 25.5.87
46 Lamlash Crescent GLASGOW G33

I reviewed Wendy on 19 March 1996 with Ian Brookesbank at the Department of Child and Family Centre in Possilpark. As you know, we have planned a meeting on 2 April 1996 to discuss with the Team in the East how we could best co-ordinate local services for Wendy.

Today, dad confirms that Wendy's encopresis and constipation are the same. She has not moved her bowels much since her last enema in January at the Out-Patients Clinic and she continues to soil her pyjamas when wakening, and on her return from school when dad says she has stained pants. She has not missed any school recently and symptomatically has had a cough but no diarrhoea or vomiting. She continues on Lactulose 10 ml bd and dad says Senokot 10 ml bd.

When I examined her today, her weight surprisingly is on the 10th centile at 22.6 Kilos, having previously been less than the 3rd centile. Her height is on 10th to 25th centile and general examination revealed a pale, sallow complexioned child who was alert with no evidence of bruising or other evidence of neglect in general. Her chest was clinically clear although she has mild hyperinflation with a Harrison's sulcus and I note her history of persistent cough.

Contd/

Abdominal examination again revealed a large, palpable faecal mass supra-pubically with a loaded left colon and this was confirmed on PR examination with a rectum full of soft faeces. There were no focal neurological abnormalities with normal sensation over the perineum and pre-pubertal genitalia.

I explained to Wendy that as she still has a loaded rectum she would require either to defaecate herself or to have an enema. She remains extremely anxious about defaecation in general and the thought of an enema worried her, but I have tried to encourage her by using local cream, such as Anusol, she might find it less painful.

I arranged for Marion Mairs, the Paediatric Homecare Sister from Yorkhill, to visit and give a Micolette enema in the first place and for Wendy to continue on Lactulose and Senokot regularly. We have arranged, as you know, the meeting on 2 April 1996 but I understand before that the Children's Hearing on 26 March 1996 is to review the supervision order and whether the children will remain on the "At Risk " Register. I certainly have my concerns that there is still a risk situation for both Wendy and Gerard at home with their father and his alcohol problem.

I will plan to see Wendy if Dr Evans from Bridgeton Child Development Centre does not take over her management but we will discuss this further on 2 April 1996. I look forward to meeting you then.

Yours sincerely

KATE McKAY

Date 05/04/2012

Dear Doctor Emma Sheppard

Factual Report for Disability Living Allowance

I am writing to you about Miss Wendy McLeish, Date of Birth 25/05/1987

Note. If the person has died or recently moved to another area please still complete the report if you can.

Your patient (or person appointed to handle their affairs) has made a claim for Disability Living Allowance. This is a benefit for people with severe disability. Entitlement is based on the amount of personal care or supervision needed or difficulty with getting around as a result of this disability. In order to decide this claim we need further information about their medical condition(s).

We hold your patient's (or a person appointed to handle their affairs) written consent to allow us to approach you for this information.

We would be grateful if you would answer the questions on this factual report based on your knowledge of the patient and their records. A special examination is not required. It would be very helpful in assessing your patient's benefit claim if you could reply within 10 working days. You may make a claim for a fee of £33.50 with your report.

The person making the claim may, at any stage, request a copy of this report to be sent to them. If there is any information you think would be harmful to their health, for example an adverse diagnosis or prognosis unknown to them, please provide details on the appropriate section of the report, marked **"Harmful Information".**

Please include in your report any relevant information contained in letters or reports from hospitals or consultants. If you think it is essential to send us originals or any copies of any letters from consultants, please obtain the author's consent for the correspondence

to be used in connection with your patient's claim.

To ensure compliance with 'Rehabilitation of Offenders Act 1974', your report should not contain any reference to criminal convictions, whether spent or not, unless the information is directly relevant to the customer's condition or disability. This report is not subject to the Access to Medical Reports Act 1998. The patient does not need to read it before it is returned.

The Disability Living Allowance and Attendance Allowance Helpline is set up to answer enquiries. Please get in touch with them if you want to ask about anything in this letter. To make sure you receive a good standard of service from the Disability Living Allowance and Attendance Allowance Helpline, our Managers may monitor or record telephone calls without warning.

Thank you for your help.

Yours sincerely

David Gibson

On behalf of the Department for Work and Pensions

Customer's Details

Full Name Miss Wendy McLeish **Date of Birth** 25/05/1987

Address 0/1 51 Coxton Pl
Garthamlock
Glasgow
G33 5EJ

Information from your patient's claim shows that they have the following medical condition/disabilities.

1. Anxiety
2. Depression with suicidal ideation and self harm
3. Leg problem - unable to mobilise
4. Liver problems with respiratory problems

For the attention of the General Practitioner

In the section headed YOUR REPORT please consider and comment in your response on the following:

Please describe your patient's present mental state including details, where relevant, of confusion, memory loss, impaired judgement, self neglect, history of self harm and dangerous behaviour. Please include details of any fluctuations or relapses of the condition.

We would be grateful if you could respond to questions within the body of your report in relation to the above medical conditions/disabilities.

Your Report

Please complete and return this report template electronically by clicking the Reply button at the top of the page.
See Section 7 of the SCI Gateway Sending & Receiving Messages User Guide.

Date when patient last seen:

1. Diagnosis of the disabling conditions (do not include minor transient conditions)

2. Please give brief details of the condition(s) stating whether they are mild, moderate, or servere, in your answer. Include details of any relevant special investigations

3. Day to day variation in the condition(s) (if any) including frequency and duration of exacerbations

4. Relevant clinical findings - for example, visual acuities, hearing, ascultatory finding, peak flow, range of joint movement, muscle wasting, SLR, reflexes, extent of breathlessness

5. Treatment - Current treatment including medication and dosage, response to treatment including control of condition and prognosis

6. Please give details, IF KNOWN, of the effects of the disabling condition(s) on day to day life.
   a. Self care - for example, washing, dressing, feeding, using the toilet, continence, and ability to rise from the chair

   b. Insight and awareness of danger

   c. Ability to get around including pain, gait, balance, breathlessness and visual loss

7. Please add any further details you think would be helpful to the Department when deciding on this claim

Thank You

I understand that, in certain circumstances, this report will be released to my patient, their legal representative and any authority deciding an appeal in relation to their entitlement to benefit. I also understand that the only information that can be withheld is medical evidence that would be harmful to the person's health.

Is this patient known to you?	
Do you attest to the accuracy of this report?

Harmful Information – do not copy

We may have to send a copy of the report to your patient. Certain information may be withheld if it appears to the Decision Maker or Appeal Tribunal that its disclosure would be **harmful to your patient's health**. An example of what may be harmful information is a diagnosis or prognosis that is **not** known to your patient, such as malignancy, progressive neurological conditions or **major** mental illness.

Please note that we cannot withhold information on any other grounds. For example, information relating to comments or remarks likely to cause embarrassment to the customer, carer, the author or a professional colleague.

Please only write about harmful information on this page.

Re: MCLEISH Wendy D.o.B: 25.05.1987 U5118413 S2664312
1/1 51 Coxton Place, Glasgow G33 5EJ

Date of admission: 30th November 2011 Date of discharge: 12th December 2011

Diagnosis: **ARDS**
Pneumonia

Procedures: **VV ECMO (30/11/11 to 07/12/11)**
Percutaneous Tracheotomy - # 7.0 (02/12/11)

Background: Wendy McLeish was referred from Glasgow Royal Infirmary. She is a cocaine smoker and suffers from anxiety & depression. She presented to Glasgow A+E on the 20th November 2011 with 4 days of SOB, chest pain, hypotensive & confused.

On the admission her 02 saturation was 83% with 100% FiO2. She was intubated & ventilated on 23rd November 2011 and transferred to the intensive care unit. From the beginning it has been difficult to achieve adequate oxygenation.

She was started on Co-Amoxicillin, Clarithromycin, Tazocin, Meropenem and Vancomycin. She is HIV, HCV & H1N1 negative.

On 30/11/11 she was referred for ECMO support and transferred by the Glasgow transport team without a discharge letter.

Wendy was cannulated for VV ECMO on the 30th November at 19:17 by the Glenfield ECMO team with a double lumen 31 Fr cannula via the RIJV. A new quadrilumen CVC was inserted in the RFV. ECMO support was started, reducing the pressure ventilation setting.

CVVH via vascath in LFV was started for decreased urine output.

Her initial CRP was 232 and she was continued with Meropenem, Tazocin and Fluconazole.

Tracheostomy performed on the 2nd December 2011 with a size 7.0 TRACOE (percutaneous).

CXR showed bilateral consolidation R>L on 30th November 2011.

Steroid and Azithromycin were commenced on the 5th December 2011.

Following weaning from ECMO support, she was decannulated on 7th December 2011.

CVVH DF treatment was stopped on the 9th December 2011, but her Creatinine & Urea were increasing. She has a good urine output with 0.2 ml/h Furosemide (250mg/25ml).

Neurologically she is good, awake & responds to stimuli.

Wendy is still on CPAP (PEEP 8, ASB 1, FiO2 35%). Haemodynamically she is stable with BP 148/88 mm Hg, HR = 96 bpm in SR. SpO2 96%. Good A/E in both lungs with some crepitations; more on the R lung. NGT feeds with Nutrison 57ml/h. Fluid balance over the last 24 hrs was negative – 1123mls. Abdomen soft.

Medication:

Meropenem	500mg	iv	qds
Fluconazole	400mg	iv	bd
Linezolid	600mg	iv	bd
Omeprazole	40mg	iv	bd
Deltaparin	2500 U	sc	od
Fluoxetine	40mg	ng	od
Clotrimazole 1% cream			
Clonidine	50 mcg	ng	tds
Azithromycin	40mg	ng	od
Doxazocin	2mg	ng	od
Pabrinex	1 pair	iv	od
Morphine	4ml/h	(60mg/60ml)	
Midazolam	4ml/h	(50mg/50ml)	
Furosemide	0.2ml/h	(250mg/25ml neat)	
Methylprednisolone	2 ml/h	(125mg/48 ml)	
Actrapid	3 ml/h	(50 unit/50 ml)	

Her previous CXRs have been copied onto a CD. Please find the last few days blood results on the attached printout.

Please do not hesitate to contact the ECMO Fellow on-call via switchboard if you have any queries.

Yours faithfully,

Dr Giuseppe Pelella
CT / ECMO Fellow

Dear Dr Wilson

Wendy was initially admitted to Glasgow Royal Infirmary on the 21st November with a Community Acquired Pneumonia. Despite being intubated, she progressively deteriorated until eventually she was referred to Glenfield in Leicester for ECMO because of difficulties in ventilating her. She remained in Glenfield until the 12th December when she was transferred back to ourselves.

On her return the main issue for Wendy was really delirium, for which she required a combination of Propofol, Midazolam, Morphine and Clonidine. Over the next 7 days, this was gradually withdrawn and I am pleased to say she was doing very well by the time she was discharged from ourselves.

Despite being on a variety of antibiotics, no organism was ever identified to be the cause of her pneumonia, though we all felt it was likely to have been a strep pneumonia. She had an atypical screen which included Legionella pneumophila as well as Hepatitis and HIV serology, which were all negative.

By the time she was discharged from us, she was really doing very well. She was able to interact with staff and was watching television and reading magazines and was close to decannulation. She was discharged to the Respiratory Ward and they will continue to review her until her discharge from hospital.

Wendy has done extremely well, given the severity of her illness and I hope she continues to improve from here on in with little in the way of residual respiratory compromise.

Please do not hesitate to contact us if you or Wendy requires any further information regarding her stay in the Intensive Care Unit.

Yours sincerely

Dear Dr A. McGinley,
RE: Miss Wendy McLeish, Flat 0/1, 51 Coxton Place, Glasgow' G33 5EJ
CHI: 2505876061

Thank you for your referral regarding the above named woman; who was allocated to David Cross, Community Mental Health Team to conduct a Specialist Shared Assessment, which was recently sent to you.

Since your referral, Miss McLeish has not fully engaged with the Auchinlea Resource Centre, Community Mental Health Team: the Crisis Intervention Team and Carr Gomm mental health Services have now closed Miss McLeish's case due to repeated non-attendance to planned office and home visit appointments. The Social Work Services have also tried to engage with Miss McLeish; however, she has not attended numerous planned appointments.

I discussed Miss McLeish's case with Dr Martin Turner, Consultant Psychiatrist at the Auchinlea Resource Centre and he advised me to now discharge Miss McLeish's case back to her General Practitioners' care: **Dr A. McGinley.**

Thank you for your referral and if you require any further information concerning Miss McLeish or wish to make a re-referral in the future then please contact the Team at the above address or telephone number.

Yours sincerely

David Cross

RE: Wendy McLeish, D.O.B. 25/05/1987, CHI: 2505876061
Flat 0 / 1, 51 Coxton Place, Glasgow, G33 5EJ

Thank you for your referral of the above patient and for discussing her with me at the end of September and today. I apologise for the delay in providing a formal response to your referral, which occurred because I was waiting to receive the assessment from the Liaison Psychiatry Service. However, I recently reviewed Ms McLeish's file and discussed her case with Mr David Cross, Social Worker, where I discovered that Ms McLeish had left the Liaison Psychiatry assessment before it could be completed.

Given the complexity of this lady's case and the high level of related risks, I have provided below a brief review of her file. Ms McLeish has apparently taken 3 significant overdoses in the context of binge drinking during the last 3 months. There are also reports in the notes of her using street Diazepam. She has also been suffering from a complex bereavement reaction and depressive symptoms since the death of her father in January 2011, complicated by him allegedly sexually abusing her in childhood. Subsequently she has apparently reported plans to track down and confront other individuals who have allegedly abused her. In addition, her mother died in 1991 and she was raised in care before being supported by Barnardos through leaving care services although she is apparently now reaching the age where she would no longer be eligible for this input. Moreover, her brother has apparently been imprisoned for murder and she has difficulties leaving her house due to anxiety, with both issues leaving her socially isolated.

Regarding input from the CMHT, she has had some contact with David Cross and has apparently reduced her alcohol consumption but failed to attend her most recent appointment with him. She was also referred to the Crisis Service and Carr-Gomm but failed to engage with either. David Cross reported that this history of difficulties with engagement had also been present for many years with the Children and Families Social Work Services. You also explained that she had a history of sporadic compliance with Fluoxetine and you have recently increased this to 40mg.

Clearly this lady has a range of significant difficulties and there are many risk factors. David Cross also noted that she dressed inappropriately and this and her history of abuse could make her vulnerable to sexual exploitation. However, very unfortunately she does

not appear to be engaging with input being offered by the CMHT. For this reason and because of the multiple other complicating factors relating to her case, it would be highly unlikely that she would engage with Clinical Psychology input at present. It is also early to begin therapy for bereavement and I have therefore not added her name to the Clinical Psychology waiting list at present. Ideally she would first gradually engage with CPN input, to build a therapeutic relationship, monitor her medication use and to try to stabilise her substance use and risky behaviour particularly her plans to track down abusers. A female worker may be most appropriate. However, assertive outreach has already been attempted by several disciplines and Ms McLeish's lack of engagement to date may require David Cross to discharge her to her GP. It might be beneficial for David to recommend community supports that her GP could offer to Ms McLeish and I would be happy to discuss this further with him.

Please contact me if you have any queries.

Yours sincerely

S. Marks

Formulation

Miss McLeish is a 24 year old female who currently lives with her boyfriend, James Ward who has not been very supportive or empathetic towards her current situation. Miss McLeish does have several female friends who visit her and periodically stay over and this appears to result in large quantities of alcohol being consumed, especially at the weekends.
Miss McLeish's both parents are dead. Furthermore, there has been a long history of Social Work Services Children and Families Team intervention and Miss McLeish and her brother Gerry McLeish have been placed and resided within numerous Residential and Foster Care Homes throughout their lifetime. Her brother is currently serving a life sentence within H.M.S. Shots Prison and she visits him monthly.
There has been three recent impulsive medication overdoses in the past few months and they have all been fuelled by excessive alcohol consumption at the time; however, there were no suicide plan involved.
Although, Miss McLeish has many people living with her at home; however, she does feel socially and culturally isolated due to her increased panic attacks when outdoors, therefore, she requires an escort to accompany her outdoors.

Background/Contributory Factors

Miss McLeish presented several reasons why she wanted to be referred to the Auchinlea Resource Centre Community Mental Health Team:

1 Her farther died aged fifty-four years old in January 2011 due to emphysema; however, she claimed that her father sexually abused her as a child (between the age of 11 - 13 years old) and when he died she found his diary within his home, which discussed both the physical and emotional neglect when they were young children and he later sexual abused her. The diary outlined his attendance to children panels and being interviewed by the police. Her father had an alcohol and was addicted to drugs and she reported that Social Work Services found used needles under her brothers bedding.
2 Her mother died about twenty years ago due to a heart attack. After her mother's death she was sent to her Aunts house; however, she claimed that her Aunt was sadistic and she used to beat her and brother with a baseball bat? Thereafter, Miss McLeish and her brother from the age of six years of age they were taken into residential and foster care throughout there life-time.
3 Her younger brother Gerry McLeish is currently served five years within a life sentence within H.M.S. Shotts Prison for murder. Miss McLeish visits him once per month.
4 Miss McLeish has recently overdoses on prescribed and non-prescribed medication (first overdose consumed her anti-depressant medication and the second was Ibuprofen 400mg x 14 tabs - both overdoses were whilst drinking alcohol to excess); however, Ms McLeish did not wait to be seen by Liaison Psychiatry within the GRI A&E Hospital during the second admission to GRI A&E Hospital.
5 She experiences regular panic attacks when outdoors, therefore, she only goes out doors when she is accompanied by someone.
6 Stated that she regularly binge drinks alcohol (drinks about three litters of 'Lambrini' wine and numerous 'Side Kicks' aftershock alcohol) with her friends and boyfriend.
7 Her current boyfriend James Ward is presently living with her; however, he appears to have very little tolerance, sympathy and

Adult Mental Health - Specialist Shared Assessment

empathy towards Miss McLeish, especially when she takes an overdose of medications. He regularly threaten to leave her if she tries to overdose again.

Risk Factors and Interventions

There has been three recent impulsive prescribed medication overdoses in the past few months and they have been fuelled by excessive alcohol uses at the time. There are no reported historical or recent self-harm issues. She claimed to constantly feel depressed, stressed, anxious and regularly has panic attacks when outdoors, therefore, she requires to be escorted outdoors. She rated her low moods as being 2/10 and this usually increased to 5/10. However, her moods become low after she drinks alcohol. There was no reported issues regarding visual or auditory hallucinations, delusions, paranoia, forgetfulness or thought disorders. Her thought content appeared to be normal; however, she sometimes doubts her self-belief and self respect for herself is poor due to the abuse and being in foster care all her life.

Her thought content appeared to be normal; however, she sometimes doubts her self-belief and self respect for herself is poor due to the abuse and being in foster care all her life. Nevertheless, she appeared to have fairly normal perceptions about herself and her environment; however she does have low self-esteem.

Stated that she regularly binge drinks alcohol (drinks about three litters of 'Lambrini' type wine and numerous 'Side Kicks' aftershock alcohol) with her friends and boyfriend every weekend. She also claimed that she has significantly reduced her alcohol consumption and now only drinks a couple of beers at the weekend. She does not regard herself as having alcohol addiction issues and that she can stop drinking alcohol whenever she wants to stop.

No reported issues drug addiction issues and she is a none smoker.

Reports to be regularly skipping meals and does not eat proper meals regularly.

Other Identified Needs/Interventions

Miss McLeish's case was discussed at the Auchinlea Resource Centre Allocation Group and the following discussion and decisions were made:

1. Miss McLeish should still continue to receive medical attention from her General Practitioner: Dr McGinley at the Easterhouse Health Centre.
2. Dr Martin Turner, Consultant Psychiatrist @ Auchinlea House CMHT advised writer to make a referral to the Auchinlea Resource Centre CMHT Crisis Team who can assess Miss McLeish's current medication and mental health and they would in turn advise Dr Turner about the appropriate future mental health care plan. However, the Crisis Team have now discharged Miss McLeish because she has not stopped drinking alcohol and has repeatedly failed to fully enagage (cancelled two appointments and was not home for two further planned appointments) with the Crisis Team.
3. He was provided with information regarding stress, anxiety, depression and anger management and was advised to attend the Barlanark Health Shop to receive stress management services.
4. A referral was suggested to be made to the Easterhouse Social Work Services Community Addiction Team; however, Miss McLeish believed she did not have addiction issues and that she can stop drinking alcohol by herself. Client declined to be referred.
5. A referral has been made to the Auchinlea Resource Centre CMHT Psychology Department. Miss McLeish has agreed to this referral and therefore, her case will shortly be transferred over to the Psychology department and closed to the Social Work Services due to no identified Social Work needs.
6. The Crisis Team have re-referred Miss McLeish's case over to the Carr Gomm Mental Health Services for a short-term intervention; however, Miss McLeish has been reluctant to engage with the Carr Gomm service and there is the possibility that Carr Gomm may withdraw their service to Miss McLeish if she does not fully engage with the service.
7. Miss McLeish will be provided with a number of two weekly appointments and then this will be monthly appointment until the case is transferred over to the psychology department.
8. Review case in three months time.
9. Miss McLeish was provided with information and contact numbers to access the Auchilea House CMHT 'Duty Services' and the Out of Hours Crisis Team.

Dear Doctor Shepard

Work Capability Assessment Outcome Notification

Patients Name	Miss W Mcleish
Patients Address	0/1 51 Coxton Pl Garthamlock Glasgow G33 5EJ

Patients D.O.B : 25 May 1987

This patient has been claiming Employment and Support Allowance. We recently assessed their ability to work using the Work Capability Assessment.

WCA Effective Date 11 October 2011

Customers with potential capability for work enter the Work-Related Activity group, whilst those who have limited or no capability for work related activity enter the support group

This patient meets, or is treated as meeting the eligibility criteria for Employment and Support Allowance [Work related activity group/Support group].

You no longer need to issue an NHS medical certificates for this person's claim to benefit. However we may need to contact you for further information about this person's illness or disability in the future.

Proof of illness or disability may still be required for other interest groups or organisations such as employers or insurance companies. The provision of this information is not usually a NHS requirement.

If your patient makes another claim for benefit in the future, we will require medical certificates from the date of illness or disability.

12 October 2011

Dear Dr McGinley

WENDY MCLEISH CHI 250 587 6061
0/1, 51 COXTON PLACE GLASGOW G33 5EJ

The above patient was referred to our team after assessment by the community mental health team at the Auchinlea Resource Centre. Wendy has taken impulsive overdoses in the past, all with alcohol and was suffering from low mood.

Our team engaged with Wendy to:

- Monitor her mood and mental state
- Provide intensive support for a short period of time
- Encourage Wendy to develop positive coping strategies

Wendy has now agreed to work with Carr Gomm to increase her socialisation and activities; she also has support from her Barnardo's support worker and Social Worker, David Cross. Wendy is happy with discharge and knows she can contact crisis services out of hours if needed.

Should you require any further information, please do not hesitate to contact our team.

Yours sincerely,

RE: WENDY McLEISH – CHI – 25 05 87 6061 **T1368337/1**
0/1, 51 COXTON PLACE, GLASGOW, G33 5EJ

Diagnosis: **Depressive Disorder F32.1**
Medication: **Fluoxetine increased to 40mgs mane**
Zopiclone 7.5mgs nocte for 2 weeks only

Follow-up: **Crisis Team**
Referral to Psychology for complex grief counselling

I saw Wendy today for review as an emergency. This follows on from a recent overdose of 12 x 20mgs Fluoxetine tablets. Wendy was assessed by Liaison Psychiatry following this overdose. I am sure a full report will be on route to you regarding this matter.

Today Wendy appeared slightly sluggish, but otherwise responsive to questions. She continues to describe some nausea and other symptoms consistent with an overdose of Fluoxetine. It was clear that she did not have a stomach pumped but was merely monitored to ensure that there were no complications from this overdose. Yet again the overdose appears to have occurred in the context of consuming alcohol; this being a recurring pattern for Wendy at this time.

Mental-state exam today revealed Wendy to be slightly flat and subdued as detailed above, but able to answer most questions in a responsive and coherent fashion. She continues to describe some good and some bad days in her mood. She also continues to drink alcohol, although she is counselled against doing this at this time. Wendy remains somewhat ambivalent about the outcome of her recent overdose and sees this as occurring particularly when she is struggling to cope with low mood.

Further Recommendations
Today I advised Wendy to remain off her antidepressant for the next 4 days because of the size of the overdose. She will continue to have adequate antidepressant dose in her system if she recommences on Fluoxetine by Wednesday. At that time an increase to 40mgs Fluoxetine daily would be sensible, as she can clearly tolerate a higher dose as evidenced by recent events. I have also requested that she commence on Zopiclone at night to help with her disrupted sleep pattern and nightmares. We shall continue to work with her during a number of different modalities to see if she can move on from her current complicated position and to address some of the issues coming from her father's death and the conflicted responses this is engendering in her.

Yours sincerely

Dr Martin Turner

Dear Colleague,

Re: Wendy McLeish DOB: 25.05.1987 CHI: 6061
0/1, 51 Coxton Place, Glasgow, G33 5EJ

Thank you for referring this lady to our service she arrived at the Accident & Emergency Department, Glasgow Royal Infirmary on 22.09.2011 at 03.07am. She arrived by ambulance which had been contacted by friends this was following taking an impulsive overdose of Fluoxetine approximately 12-24 20mgs tablets taken whilst intoxicated. The overdose was taken on 22.09.2011 at 01.30am. I carried out a psychiatric assessment of Ms McLeish whilst an inpatient in AAU Glasgow Royal Infirmary on 22.09.2011 at 10.30am. At time of assessment she was alert and orientated and willing to participate in a psychiatric assessment.

History of Presenting Complaint
Ms McLeish informed me that whilst taking the overdose she had been drinking with friends. She had drunk approximately 9 Budweiser's and was quite intoxicated at the time of her actions. She states her friends were in her living room and she went into the kitchen to take the tablets. She returned to the living room and fell. Ms McLeish then informed her friends of her actions and they called for an ambulance. She informs me this overdose was an impulsive act, there was no planning to her actions. She did not write a suicide note and is glad to be alive at time of assessment. She has no ongoing suicidality with no active plan. The trigger to her actions appears to be difficulty adjusting to the change in her day to day living following the death of her dad in January 2011. She informs me she feels isolated and lonely and describes herself as an orphan. Her brother is currently in jail for murder serving a 20 year sentence. He has completed 6 years to date.

Past Psychiatric History
Ms McLeish has had two previous overdose episodes over the past few weeks. Ms McLeish is currently involved with the Crisis Team at Auchinlea Resource Centre in

relation to same. I discussed this lady's assessment with staff at Auchinlea Crisis Team who were willing to carry on this lady's care in the community.

Past Medical History
No abnormalities

Current Medication
Propranalol (long term prescription),
Fluoxetine initially commenced 20mgs by GP 3 months ago recently increased to 40mgs

Drug, Alcohol Smoking & Forensic History
Drugs: Ms McLeish denies any illicit drug use.

Alcohol: Ms McLeish describes herself as a social drinker despite this on discussion with staff at the Crisis Team at Auchinlea Resource Centre this lady appears to downplay her alcohol intake claiming to only consume alcohol at weekends despite this she was drinking on night of overdose which was a Wednesday evening.

Ms McLeish is a non smoker.

Forensic History: Nil

Personal History & Social Circumstances
Ms McLeish was born in Glasgow, she was in and out of foster care from aged 4 and she had a very displaced childhood moving around primary schools. She stayed in children's homes throughout her secondary school years and attended the same Secondary School which was more settling for her. Ms McLeish left school aged 16 and attended College to study Child Care. Ms McLeish has worked several jobs on and off she worked in the Royal Mail many years ago. She last worked 4 years ago and has no plans to gain employment in the future. Ms McLeish is in receipt of benefits receiving £71 per fortnight. Ms McLeish struggles financially. Her mother died 20 years ago from an MI. Her dad died in January 2011 from Emphysema. She has one brother Gerald as previously stated he is currently in jail for murder. She gets on well with her brother and visits him regularly. She currently lives with her boyfriend of one year they had no children. Ms McLeish describes this as a good relationship although after speaking with staff at Auchinlea Resource Centre I was informed that this relationship can be controlling at times.

Family Psychiatric History
Ms McLeish is unaware of any mental illness within her family.

Mental State Examination
At time of assessment eye contact was good. Ms McLeish's speech was quiet and difficult to comprehend at times. Ms McLeish appeared well kempt dressed in hospital night attire with her hair tied neatly in a ponytail. On mood her mood appeared flat at time of assessment. She states this has been low for the past 2 months and she feels this has deteriorated steadily since the death of her father in January 2011. She was her dad's main carer and now has a void in her day and finds her day is long and boring. She currently rates her mood as 2-10 and believes she has had one good day in the past 7. Her sleep pattern has been disturbed. She has difficulty falling asleep, wakening throughout the night when she cannot get back to sleep this has been the same pattern for 2 months. She tends to catnap in front of the tv during the day. Her appetite is good and her concentration is intact. She states her memory has been poor and she has noticed a deterioration in her memory

over a 2 month period. There was no evidence of psychosis at time of assessment and she denied psychotic symptoms past or present. There was no evidence of formal thought disorder and she did not appear preoccupied at time of assessment. On suicidality she is not actively suicidal with no active suicide plan. She is unsure of her future plans.

Impression
A 24 year old lady who has taken an impulsive overdose whilst intoxicated history of same over recent weeks and has current involvement with the Crisis Team based at Auchinlea Resource Centre. This lady appears to be suffering from an adjustment disorder following the death of her father. Ms McLeish also appears to be using alcohol in a harmful way resulting in an increase in impulsive behaviour.

Discharge Plan
1. I discussed this lady's presentation as previously stated with Crisis Team staff based at Auchinlea Resource Centre who will continue with this lady's care in the Community on discharge from hospital. Ms McLeish is in agreement to discharge plan.
2. I advised staff on AAU Glasgow Royal Infirmary that Ms McLeish could be discharged home once deemed medically fit.

Yours Sincerely

...otions play an important part in most illnesses. If your clinician knows about these feelings she or he will be able to help you more.

NHS Greater Glasgow

This questionnaire is designed to help your clinician to know how you feel. Read each item and **underline** the reply which comes closest to how you have been feeling in the past week.

Don't take too long over your replies; your immediate reaction to each item will probably be more accurate than a long thought-out response.

A 2 **I feel tense or 'wound up':**
- Most of the time
- ✓ A lot of the time
- From time to time, occasionally
- Not at all

D 2 **I still enjoy the things I used to enjoy:**
- Definitely as much
- Not quite so much
- ✓ Only a little
- Hardly at all

A 1 **I get a sort of frightened feeling as if something awful is about to happen:**
- Very definitely and quite badly
- Yes, but not too badly
- ✓ A little, but it doesn't worry me
- Not at all

D 2 **I can laugh and see the funny side of things:**
- As much as I always could
- Not quite so much now
- ✓ Definitely not so much now
- Not at all

A 1 **Worrying thoughts go through my mind:**
- A great deal of the time
- A lot of the time
- ✓ From time to time but not too often
- Only occasionally

D 1 **I feel cheerful:**
- Not at all
- Not often
- ✓ Sometimes
- Most of the time

A 2 **I can sit at ease and feel relaxed:**
- Definitely
- Usually
- ✓ Not often
- Not at all

D 3 **I feel as if I am slowed down:**
- ✓ Nearly all the time
- Very often
- Sometimes
- Not at all

A 1 **I get a sort of frightened feeling like 'butterflies' in the stomach:**
- Not at all
- ✓ Occasionally
- Quite often
- Very often

D 2 **I have lost interest in my appearance:**
- Definitely
- ✓ I don't take as much care as I should
- I may not take quite as much care
- I take just as much care as ever

A 3 **I feel restless as if I have to be on the move:**
- ✓ Very much indeed
- Quite a lot
- Not very much
- Not at all

D 2 **I look forward with enjoyment to things:**
- As much as ever I did
- Rather less than I used to
- ✓ Definitely less than I used to
- Hardly at all

A 1 **I get sudden feelings of panic:**
- Very often indeed
- Quite often
- ✓ Not very often
- Not at all

D 1 **I can enjoy a good book or radio or TV programme:**
- Often
- ✓ Sometimes
- Not often
- Very seldom

Dear Dr McGinley

RE: Wendy McLeish, CHI 2505876061, 0/1 51 Coxton Place, G33 5EJ.

The above patient has been referred to our service for further assessment and support due to escalating mental health problems. Our treatment plan will be:

- Patient will be visited at home 2-3 times weekly at present to monitor her mental health and to liaise with Dr Turner regarding same.
- To monitor medication for compliance, efficacy and side effects.
- To provide formal/ongoing risk assessment.
- To explore appropriate coping strategies, symptom management and education on medication and relapse prevention.

Our team have three main aims:

- To provide an alternative to hospital admission where possible.
- To provide support to enable early discharge from hospital
- To offer assessment and resolution for people in mental health crisis.

We generally see patients for a maximum of 6-8 weeks before referring them on to an appropriate service.

Should you require information on reason for referral or have any concerns, please do not hesitate to contact myself on the above telephone number.

Yours sincerely,

Rosina West
Senior Crisis Practitioner

Clinical Comments:
Diagnosis: Respiratory tract infection

This 26 year old lady attended the Assessment Unit with shortness of breath on exertion with central chest tightness.

On examination she appeared well. Observations were satisfactory and she had a tender chest wall around her lower ribs. She had a mildly tender epigastrium but the remainder of the examination was unremarkable. Urinalysis revealed +++leucocytes and +protein. Chest x-ray was normal and bloods

showed a raised CRP at 129 and white cell count of 11.1. She was treated for a probable chest and urinary tract infection with oral Amoxycillin. She was discharged home.

Yours sincerely,

Dr Christine Aiken Consultant Physician Acute Medicine

Follow-up arranged: none

Electronically Signed: Dr Christine Aiken, Consultant

Your reply

Please answer the following questions from the information which is currently available to you.

If you need more space for any of your answers, please continue at Part 7.

1 When did your patient last see a GP?

28/06/13

2 Current conditions affecting ability to work:
Please give us details of those conditions **which may have significant effect on the person's capacity to work.** Include:

- Relevant symptoms and signs, including side effects of medication, with dates. For mental health conditions, please provide brief mental state examination findings, if available.
- Past, present and planned investigations and management, including medication, **where relevant.**

If you are sending a computerised printout of current medication you do not need to list this here.

*Please complete **both sides** of this form, and return the completed form in the supplied envelope - with the above address showing in the window*

268 E 156

Condition and date of diagnosis	Symptoms and signs	Investigations, management & medication
TREMOR/ HEADACHES. STRESS	Benign Tremor since ca 2007	Exacerbated by life Episode in 2011, ITU with ARDS. May 2012
Substance Misuse	Alcohol/ Cocaine +/ benzodiazapines	Declined Referral to the Community Addiction Team May 2012.

About your patient - continued

3 Current conditions not affecting ability to work
Please list any other relevant conditions that do not affect the ability to work.

4 If known from your knowledge of the patient, please tick the boxes that apply and provide a brief explanation if your patient has difficulties with any of the following activities

Walking or moving	✓
Transferring between seats	
Reaching	
Picking up objects	✓
Manual dexterity	✓
Communicating with others	
Continence	
Learning simple tasks	
Awareness of hazards	✓
Initiating and completing personal actions	
Coping with changes or social engagement	✓
Appropriateness of behaviour	✓
Eating or drinking	

due to Sarcoidosis – ARDS

Tremors

Under Influence of Substances

Multiple Suicidal attempts, Desperate to Access Treatment

5 Does the patient have a history of threatening or violent behaviour? No ☐ Yes ☐
Tell us about their behaviour within the last 5 years, and whether they have been identified by the Zero Tolerance (Violent Behaviour) Initiative. Use the space below at **Part 7**

6 Could your patient travel to an examination centre by public transport or taxi? No ☐ Yes ✓
Please tell us why at **Part 7**

7 Additional information
Please continue on a separate sheet if necessary.

Difficult Social Circumstances, Hampers Coping Mechanisms

The information you have given us may be copied to the patient, their legal representative or the Tribunal Service.

Clinicians are aware [illegible] **important part in most illnesses.** If your clinician knows about these feelings she or he will be able to help you more.

NHS Greater Glasgow

This questionnaire is designed to help your clinician to know how you feel. Read each item and **underline** the reply which comes closest to how you have been feeling in the past week.

Don't take too long over your replies; your immediate reaction to each item will probably be more accurate than a long thought-out response.

I feel tense or 'wound up':
Most of the time
2 A lot of the time
From time to time, occasionally
Not at all

I still enjoy the things I used to enjoy:
Definitely as much
Not quite so much
Only a little
3 Hardly at all

I get a sort of frightened feeling as if something awful is about to happen:
Very definitely and quite badly
2 Yes, but not too badly
A little, but it doesn't worry me
Not at all

I can laugh and see the funny side of things:
As much as I always could
Not quite so much now
2 Definitely not so much now
Not at all

Worrying thoughts go through my mind:
A great deal of the time
2 A lot of the time
From time to time but not too often
Only occasionally

I feel cheerful:
Not at all
2 Not often
Sometimes
Most of the time

I can sit at ease and feel relaxed:
Definitely
Usually
2 Not often
Not at all

I feel as if I am slowed down:
3 Nearly all the time
Very often
Sometimes
Not at all

I get a sort of frightened feeling like 'butterflies' in the stomach:
Not at all
Occasionally
2 Quite often
Very often

I have lost interest in my appearance:
Definitely
2 I don't take as much care as I should
I may not take quite as much care
I take just as much care as ever

I feel restless as if I have to be on the move:
Very much indeed
2 Quite a lot
Not very much
Not at all

I look forward with enjoyment to things:
As much as ever I did
Rather less than I used to
2 Definitely ~~less than~~ I used to
Hardly at all

I get sudden feelings of panic:
Very often indeed
2 Quite often
Not very often
Not at all

I can enjoy a good book or radio or TV programme:
Often
Sometimes
Not often
3 Very seldom

Now check that you have answered all the questions

Our phone number is: 0141 249 3565

If you have a textphone, you can call on: 18001 0141 249 3565

If you get in touch with us, tell us this reference number: JZ174505B

Date: 17th June 2013

About your patient

Full Name	Miss Wendy Mcleish
NINo	JZ174505B
Date of birth	25th May 1987

Address: 0/1 51 Coxton Pl, Garthamlock, Glasgow, G33 5EJ

Dear Doctor,

Your patient is being assessed for Employment and Support Allowance and we need to find out whether they are able to do any work. By completing this form you will help our medical staff decide whether your patient needs a face-to-face medical assessment.

Please note:

- NHS doctors have a **contractual obligation** to provide the information requested without charge.
- The form should be completed from your medical records. A separate examination is not necessary.
- It is acceptable for you to delegate completion of the form to your practice nurse but you must confirm your authorisation by signing at the end.
- Your patient has given consent to allow us to approach you for this information in accordance with GMC guidelines.
- An online version of this report which can be completed electronically and printed is available at **www.dwp.gov.uk/healthcare-professional/guidance**
- **A well completed form may mean that your patient will not need a further medical assessment and will help in making a fair decision on benefit entitlement.**

COMPUTER PRINTOUTS

You can send us a computer printout of the appropriate part of the patient record if you wish, but you will still have to complete any sections of the form where the answer is not clear from the printout. We are only able to accept information directly relevant to our enquiries. If a printout is available, please make sure it includes the following:

- Active problems.
- Current medication with last prescribed date.
- Details of the last three consultations. Please remove any third party data.

If you have any queries about this form please phone the number above. If you would like to discuss anything with our medical staff, please phone the number above and ask for a member of the medical staff on the customer service desk. If there is any medical evidence that you think would be harmful to your patient's health, please give us this information on a separate sheet of paper, so that this can be withheld.

Please reply within 5 working days. A business reply envelope is enclosed for your use.

Thank you for your help.

Yours sincerely,

Miss Amanda Mcmahon

FAST ALCOHOL SCREENING TEST (FAST) FOR THE DETECTION OF PROBABLE HAZARDOUS DRINKING

24 MAY 2013

For the following questions please circle the answer which best applies.

1 drink = 1 unit = 1/2 pint of beer or 1 glass of wine or 1 single spirits

1. MEN: How often do you have EIGHT or more units on one occasion?
WOMEN: How often do you have SIX or more units on one occasion?

Never	Less than monthly	Monthly	Weekly	Daily or almost daily	SCORE
0	1	2	(3)	4	

Only ask Questions 2, 3 & 4 if the response to Question 1 is "Less than monthly" or "Monthly"

2. How often during the last year have you been unable to remember what happened the night before because you had been drinking?

Never	Less than monthly	Monthly	Weekly	Daily or almost daily	SCORE
0	1	(2)	3	4	

3. How often during the last year have you failed to do what was normally expected of you because of drink?

Never	Less than monthly	Monthly	Weekly	Daily or almost daily	SCORE
0	1	(2)	3	4	

4. In the last year has a relative or friend, or a doctor or other health worker been concerned about your drinking or suggested you cut down?

Never	Yes, on one occasion	Yes, on more than one occasion	SCORE
0	2	(4)	

TOTAL
11

If the person scores 3 or above, ask **two consumption** Questions to record levels of alcohol use:

1. On average how many days of the week do you drink?
2. On average how many units of alcohol do you consume?

FAST POSITIVE
(Score of 3 or more)

YES	NO

Date: 11/01/2013

Dear Dr Sheppard/McGinley,
RE: Wendy McLeish, Flat 0/1, 51 Coxton Place, Glasgow, G33 5EJ.
CHI: 2505876061

I recently informed you by letter that your patient Wendy McLeish was receiving weekly home visit supports from Glasgow Association Mental Health; however, over the past few months Wendy has not been engaging and has not been home for planned GAMH home visits. Furthermore, the Social Work Services are currenly in the process of **Self Directed Support – Personalisation**, which will enable Wendy to receive a financial buget to purchase and receive the GAMH services.

I have also written to Wendy to request that she contact the Auichinlea House Social Work Services before **Friday 11th January 2013** to instruct me if she still wishes to continue with the Self Directed Support – Personalisation process and to also receive the GAMH service. However, we have not heard from Wendy to date and we now have to presume that Wendy does not wish or require the GAMH service or to continue the process of Self Directed Support – Personalisation, therefore, we have no choice but to close her case at Auchinlea House Social Work Services.

Nevertheless, If you believe there is a significant risk of Wendy not receiving the GAMH service and that you can dicuss and convince her to fully engage with GAMH and to complete the Self Directed Support – Personalisation process then can you please write to me before **25/01/2013.** If we do not hear from yourself or Wendy before this date then her case will be closed off to the Auchinlea House, CMHT, Social Work Service.

Thank you for your attention on this matter.

Yours sincerely

David Cross

Our Ref DC Your Ref
Date: 20/12/2012

Dear Wendy,
RE: Self Directed Support - Personalisation & GAMH Key Worker.
CHI: 2505876061

We visited you at home on **Thursday 20/12/2012 at 2pm**; however you were not home and you did not telephone to cancel or re-arrange our visit.

GAMH have visit you on numerous occassions and you have not been home for their agreed planned Home Visit; therefore I would now like you to contact me at the above address or telephone number to inform me if you wish to continue to receive these GAMH Home Visits. Furthermore, you are currently being processed through the Social Work Services **Self Directed Support – Personalisation**, which will enable you to receive a financial buget to enable you to purchase and receive the GAMH services,

It is important that you contact me before **Friday 11th January 2013** to instruct me if you wish to continue with the Self Directed Support – Personalisation process and to receive the GAMH service. If we do not hear from you before this date then I will presume you no longer wish to receive the GAMH service and that you do not wish to continue with the Self Directed Support – Personalisation process.
Thank you for your support on this matter.

Yours sincerely

David Cross

VERIFIED Verified By: Mairi Devine (Sonographer) 21/09/12 1051.
Clinical History : ? Gallstones.

US Abdomen : Difficult examination due to high position of liver.

The gallbladder appears normal no stones demonstrated. Normal calibre common duct with no intrahepatic duct dilatation.

The liver appears normal in shape, size and echotexture, no focal lesion demonstrated. Portal vein appears patent with no reversal of flow. The spleen is not enlarged. No free fluid seen within the abdomen.

Normal ultrasound appearance of the head of pancreas, the body and tail obscured by overlying bowel gas.

Normal ultrasound appearance of both kidneys and aorta.

REASON FOR REFERRAL - PLEASE GIVE DETAILS BELOW

Weak after long illness pneumonia in winter over autumn 2011, Navidoy recommend gym style reconditioning

1. If your patient has established heart disease please DO NOT use this form. Please use Referral Form for Patients with Established Heart Disease.

2. Is your patient motivated to become more active? YES ☑ NO ☐

If 'no' please DO NOT refer to the Live Active Exercise Referral Scheme.

3a. Most recent BP reading ____ / ____ **mmHg**
Date ____

3b. Is your patient being monitored/treated for high BP? YES ☐ NO ☑

Please do not use the Live Active Exercise Referral Scheme if BP is consistently >160/90mmHg and is not being monitored/treated OR if BP is >180/110mmHg.

4. Does your patient have any physical limitations that would make physical activity difficult? YES ☐ NO ☑
If 'yes' please give details using the options below

☐ Back Pain ☐ MS ☐ OA
☐ Amputation ☐ Osteoporosis ☐ RA
☐ Injury ☐ Chronic Fatigue ☐ Joint Replacement
☐ PVD ☐ Obesity ☐ Other Joint Pain
☐ Functional Post Stroke (please give details) ☐ Other (please give details)

5. Does your patient have any mental health issues (e.g. anxiety, depression etc.)? Please give details. YES ☑ NO ☐
stress, occasional alcohol xs, supported by barnados, traumatic bereavements

6. Does your patient have any learning difficulties or cognitive impairment? Please give details. YES ☐ NO ☑

Please note that patients must have the mental and physical ability to be able to participate in class based or individual based activity programmes. Patients with additional support needs must be accompanied by a carer (professional/voluntary). The Live Active Exercise Referral Scheme is unable to provide one-to-one exercise tuition.

7. Does your patient have any respiratory problems? YES ☐ NO ☑
Please give details.
pneumonia fully resolved

8. Is your patient diabetic? IDDM YES ☐ NO ☑
NIDDM YES ☐ NO ☑

9. Does your patient suffer from epilepsy? YES ☐ NO ☑
If 'yes' how often do they have a seizure
☐ Daily ☐ Weekly ☐ Monthly ☐ Rarely

10. Is your patient taking any medication that will affect their exercise capacity? YES ☐ NO ☑
If 'yes' please attach repeat prescription printout

Based on this health profile, and my knowledge of the patient, I know of no reason why this patient should not join the Live Active Exercise Referral Scheme. This scheme involves a one to one physical activity consultation and advice on appropriate exercise and self monitoring (as per NHSGG&C protocol). This information will be stored on a secure electronic database with additional paper copies stored securely as well.

Results

Active B12 - Authorised on 14.02.25 at 12:42

Active B12	63	pmol/L	(>25)

Comments:
Result in indeterminate range (25 - 70 pmol/L).
Consider treatment for B12 deficiency in following patient groups:
- Patients with a condition which may deteriorate quickly and have a severe effect on QoL (neurological, haematological cond'ns)
- Patients who are pregnant or breast feeding.
- Patients with a recognised cause of B12 deficiency (surgery or autoimmune gastritis).
Otherwise consider other causes of symptoms and if necessary repeat active B12 level at 3-6 months.
Note change in the B12 assay to an active B12 assay from 14/5/24.

Serum Ferritin - Authorised on 14.02.25 at 12:42

Serum Ferritin	152	ug/l	(15-200)

Comments:
Males 15-300 (<15 iron deficiency)
Females 15-200 (<15 iron deficiency)
15-50 intermediate result. Consider iron deficiency in anaemic patients, older patients and those with inflammatory disease.

Serum Folate - Authorised on 14.02.25 at 12:42

Serum Folate	4.1	ug/l	(3.1-20.0)

SCOTTISH PULMONARY VASCULAR UNIT

Dear Angela

Patient Name: Wendy McLeish **CHI:** 2505876061 **DOB:** 25/05/1987
Patient Address: 0/2 312 Cumbernauld Road, Glasgow, G31 3LY

Wendy has now had her CTPA and we reviewed this at the SPVU MDT today. We noted that there was a probable ASD on the CTPA and this would fit with her echocardiogram suggesting a volume rather than pressure overloaded RV.

We will arrange to see her in our clinic and do a more detailed echo study and can then refer her on to our colleagues in the Adult Congenital Service.

Yours sincerely

Dr Melanie Brewis
Consultant Pulmonary Vascular Physician

Dear Dr. MM Morris,

Wendy McLeish; D.O.B: 25 May 1987; CHI: 2505876061
FLAT 3/2, 312 CUMBERNAULD RD, Glasgow, Lanarkshire, G31 3LY

Attendance: Specialty - Respiratory Medicine; Clinic - GRAWRE5-DR A WRIGHT RESP WED AM
Date and Time of Appointment - 04/12/2024 11:00

Follow Up: Dr Wright's Clinic 7th May 2025

Clinical Comments:
Diagnosis:

1. Previous ECMO for respiratory failure

2. Patient reports breathlessness on exertion – no desaturation on 6 minute walk test

3. Both Echo and HRCT scan are suggestive of PH

Plan from clinic:

1. CTPA - requested

2. Referral to SVPU Unit - dictated

I reviewed Wendy in my respiratory clinic on 4th December 2024. Since I last saw her she has had an Echo and 6 minute walk test.

These show she does not desaturate but again there is a suggestion of PH.

I explained this to Wendy today and subsequently booked a CTPA. I will also ask for some advice from our colleagues at the Golden Jubilee National Hospital SVPU.

I have updated her blood tests today.

In clinic she appeared a little bit shaky but respiratory examination was normal.

Yours sincerely

Dr A Wright

Dear Dr. MM Morris,

Wendy McLeish; D.O.B: 25 May 1987; CHI: 2505876061
FLAT 3/2, 312 CUMBERNAULD RD, Glasgow, Lanarkshire, G31 3LY

Attendance: Specialty - Respiratory Medicine; Clinic - GRAWRE5-DR A WRIGHT RESP WED AM
Date and Time of Appointment - 29/05/2024 10:00

Follow Up: Respiratory Clinic Dr Wright 4/12/24 at 11 am

Clinical Comments:
Diagnoses:

1. Previous ECMO for respiratory failure due to pneumonia
2. Recent CT scan showed no established parenchymal lung disease

Plan from clinic:

1. Six minute walk test
2. Spirometry
3. Echo to assess for pulmonary hypertension

The above patient attended for a face to face return appointment today. Wendy reports really quite severe breathlessness in that if she walks from the toilet to the living room she is very short of breath. This level of symptom burden is obviously not in keeping with her previous results.

We will get the above investigations carried out and take things from there.

Yours sincerely

Dr Angela Wright

This lady had a tillaux fracture of her right ankle in January. Check x-rays today show no further displacement but the fracture is still visible..

On clinical review she has global tenderness round the ankle but no significant swelling today. She is not tender over the syndesmosis or the fragment itself. She does get a lot of current pain issues secondary to sciatica for which she takes gabapentin. At this point we will continue to help her with rehabilitation and I have made a referral for physiotherapy. We will review her back in a further couple of months with fresh x-rays on arrival.

Yours Sincerely

Miss N Jane Madeley F.R.C.S (Tr&Orth)

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: Worsening bilateral leg pain and back pain

Comment: Dear Colleague,

I would appreciate your opinion regarding this 37-year old lady who has had longstanding mild sciatica symptoms and lower back pain. She also has a history of hip arthritis, epilepsy and essential tremor.

In the past two months, she has experienced worsening bilateral shooting pains down to her ankles. On straight leg raise, she gets L3 distribution pain in both inner thighs. She has no weakness or numbness, and does not describe any saddle anaesthesia or sphincter dysfunction.

Despite increasing her gabapentin, her pain has continued to worsen, so I have increased it to 300mg three times a day to see how this goes. She is also on Ralvo patches for her back pain.

I would appreciate your opinion on whether she requires any further investigation or imaging.

Kind regards,
Dr Matthew Lyons

Dear Dr Morris,

Wendy McLeish; D.O.B: 25/05/1987; CHI: 2505876061
FLAT 3/2, 312 CUMBERNAULD RD, Glasgow, Lanarkshire, G31 3LY

Diagnosis: Tillaux fracture right ankle

Management: conservative

Outcome: review in 6 weeks with x-ray on arrival

I have reviewed this 36-year-old lady in clinic today. She had a fall on the 20th of January and sustained a Tillaux fracture which has been treated conservatively.

She is still complaining of pain although her ankle is getting better.

X-rays show that the fragment has not displaced and that the syndesmosis has not widened.

I have asked her to continue with the boot for another two weeks and then to wean herself out of the boot. I have also given her foot and ankle exercise sheet with an exercises programme to follow.

We will see her in 6 weeks' time for a further review.

Yours Sincerely,

McLeish Wendy CHI: 2505876061 GCL 26/02/2024 v1

Dear Dr Morris,

Wendy McLeish; D.O.B: 25/05/1987; CHI: 2505876061
FLAT 3/2, 312 CUMBERNAULD RD, Glasgow, Lanarkshire, G31 3LY

Diagnosis: Tillaux fracture on the right ankle

Management: Conservative

Outcome: Review in the clinic in three weeks with x-ray on arrival

I reviewed this 36 year old lady in the clinic today. She had a fall on 28 January and she sustained a minimally displaced **Tillaux** fracture in the right ankle. It was isolated, closed and neurovascularly intact injury.

Today she is still complaining of pain in her ankle but it is getting better. She does not have any other complaints. She was in a boot and we sent her for an x-ray.

The x-ray did not show any displacement on the fracture and therefore we are going to continue with conservative management.

I advised the patient that she can mobilise now as her pain allows and we will see her in three weeks in the clinic with x-ray on arrival. She is happy with this plan and she has our number if she has any problems before then.

Yours sincerely

Tariq Altell

Dear Mrs McLeish,

I tried to give you a call a few times today, however could not get through. Your mobile would just ring and then go to the Giff-Gaff mobile answer service.

I will therefore send out a further appointment. This will be face to face if this is okay as I am seeing the vast majority of my patients in person now.

I hope that you are well.

Yours sincerely

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: Numbness left hand

Comment: Thank you for seeing this lady. She woke this morning with numbness and pins and needles in all 5 fingers of her left hand. She was unable to open her car door later today when she attended ortho for a routine appointment. She feels the numbness is moving further up her hand and the subjective weakness in her grip is not improving.
No loss of speech, vision, No other weakness. No history of arm or shoulder trauma.
OE subjective loss of sensation fingers. Grip appears weaker compared to right. No obvious wrist drop.
? radial nerve palsy.

Dear Wendy,

Thank you for attending for your CT scan. This has now been reported. It has been compared to your previous scan from March.

There has been an improvement in the non specific changes that were previously there. There are no new changes and nothing that shows that progressive fibrosis.

I have copied in your GP so they are also aware of this.

Yours sincerely,

Dr Angela Wright

Wendy McLeish; D.O.B: 25 May 1987; CHI: 2505876061
FLAT 3/2, 312 CUMBERNAULD RD, Glasgow, Lanarkshire, G31 3LY

Attendance: Specialty - Respiratory Medicine; Clinic - GRAWRE5-DR A WRIGHT RESP WED AM
Date and Time of Appointment - 19/07/2023 09:20

Requested Out-patient Investigations:
HRCT

Follow Up: Interval HRCT

Clinical Comments:
Diagnosis:

1. Previous intubation and ventilation and ECMO for severe pneumonia 2011

2. Non smoker

Plan:

1. Repeat HRCT - requested.

I reviewed Ms McLeish over the telephone on behalf of Dr Wright today. She reports a difficult few months with an inpatient stay in March of this year for ataxia. From a breathlessness point of view things are fairly static. She remains significantly breathless on moderate exertion but does not feel this has changed significantly over the past few months, if not years. She also reports an ongoing productive cough of white sputum which she says is new from her admission in March, but on

previous review she has been reporting this since October of last year. She has had multiple previous courses of antibiotics for this which have done minimal to help.

A HRCT done earlier this year demonstrated some traction bronchiectasis secondary to her previous severe pneumonia. There was some associated ground glass opacities which were suggestive of intercurrent infection and we have therefore arranged an interval HRCT to assess whether these changes have resolved. She also undertook PFTs in April, however, the results are non diagnostic due to inadequate effort so I have left her inhaled therapy unchanged. As things are static we will review Ms McLeish in 6 months time following the results of her interval HRCT.

Yours sincerely

Dr Mark Andonovic

Dear Dr O'Neil

WENDY MCLEISH DOB 25.5.87 HN 370283
46 LAMLASH CRESCENT GLASGOW G33 3XP

I saw Wendy with her father at the clinic today. I am afraid that she has been soiling again and on abdominal examination had evidence of faecal retention.

I feel all this is likely to be the inevitable ~~in~~ consequence if there is not some positive input from the Department of Child and Family Psychiatry and the social work department.

I have written again to Dr Sneddon, Consultant Child Psychiatrist at Possilpark Health Centre asking if they would get involved with the family again. I am also asking Dr June Ross, Consultant in Community Child Heath if and when she could be seen by the Consultant Community Paediatrician, Possilpark Health Centre.

Wendy has one further review at Yorkhill but I really feel that it is rather pointless me seeing her and also difficult for the family to bring her across Glasgow to my clinic and the Community Child Health Service are setting up ~~the~~ local facilities. as

Yours sincerely

Dear Dr O'Neil

WENDY McLEISH DOB: 25 5 87 HN: 370283
46 LAMLASH CRESCENT GLASGOW G33 3XP

I saw Wendy with her father today. She had just started her new school term and seemed very happy. I gather that she is opening her bowels every day once or twice and soils a very slight amount every 1-2 weeks.

Certainly, there was no evidence on abdominal palpation of major faecal retention. I arranged to see her again in 2 months and suggested that she continue with the laxatives she was using ie. Lactulose 10mls twice a day and Senokot paediatric liquid 15mls at night.

She is to return in 2 months.

Yours sincerely

T J EVANS
CONSULTANT PAEDIATRICIAN

Dear Dr O'Neil

WENDY McLEISH DOB: 25 5 87 HN: 370283
46 LAMLASH CRESCENT GLASGOW G33 3XP

I am sorry that you did not get a typed discharged letter following Wendy's admission to hospital in April. Her faecal retention and soiling improved during the first day in the ward following the use of enemas and regular Lactulose and Senokot.

I felt that it was very important to have a psychologist and social work department involvement and report on this child. You will know of the previous concerns.

However, despite our best attempts there appears to have been no progress.

I saw Wendy with her father and her father's sister at the clinic on the 15th June. They said that she was generally better and soiled perhaps now only twice a week but may go a week or a little more without soiling at times. She is still on Lactulose 10mls twice a day and Senokot 15mls at night which I would like her to continue.

The abdomen as always was difficult to palpate as she is very tickly but I could not feel any faecal masses in the colon.

I will write again to Dr Ann Sneddon, Consultant Child Psychiatrist for the Northern and Eastern District based at Possilpark Health Centre and I will ask for her departments' assistance.

I suggested seeing Wendy again at my clinic in 2 months.

Dear Dr. O'Neill,

RE: Wendy McLeish - D.O.B.: 25.05.1987
46 Lamlash Crescent, Glasgow, G33 3XP

Thank you for referring Wendy to us again.

We discussed the family with their Area Social Worker, Ricky Snedden, whom we have had contact in the past and we sent them an appointment at Yorkhill Hospital on 21st March 1995 at 11.00a.m. Unfortunately, they did not keep this appointment, nor have they contacted us by telephone.

We have written to Mr. McLeish asking him to contact us by telephone within the next two weeks if he would like a further appointment.

We will let you know the outcome of this as soon as possible.

Yours sincerely,

I reviewed Wendy in Dr Evans' clinic today. I am sorry to say that her soiling which was minimal after discharge from hospital had become worse over the past few weeks, she is now soiling every single day. Unfortunately she has not had any medication because her father has said that you were trying to wean her medication down.

She is still complaining of pain in passing bowel motions and says that she is having occasional runny bowel motions once or twice a day.

On examination she looked well. She is growing. Her abdomen was soft and rather difficult to examine but she had definite faecal masses palpable in both illiac fossa.

I think we should re-start Wendy's medication i.e Lactulose 10mls twice a day and Senokot 15 mls at night time and I will arranged admission for bowel clearance to the ward within the next few weeks. I also noted today that her dad indeed smelt quite strongly of alcohol.

Yours sincerely

Admitted: 6 12 94
Discharged: 21 12 94
Consultant: Dr Evans
Diagnosis: Constipation

Further to my letter from the clinic when she was admitted to ward 6B for treatment of a constipation. She was initially noted to be very loaded with faecal matter and required 4 Phosphate enemas to start her bowels moving. Following the enemas she had been started off on Lactulose 10mls twice a day and Senokot, initially 5mls once a day but increased over the next few days to 15mls once a day.

On the day during her admission she was pyrexial and had some vomiting and symptoms of headache and sore throat. This responded to Paracetamol and a clean catch urine specimen was clear. By the time she was discharged she was not soiling though she soiled on the day of discharge and was passing up to 2 stools a day in the toilet. Clinically, she appeared less loaded with faeces. She was discharged to continue her medication which was Lactulose 10mls orally twice a day, Senokot 15mls once at night and she will be seen in the clinic in 6 weeks time.

Yours sincerely

*** URGENT *** URGENT *** URGENT ***

Thank you for seeing this 7 year old girl who has recently been re-referred to the Department of Child & Family Psychology. She had a problem with encropeces since the sudden death of her mother 3 years ago. However more recently she has been continually staining her underwear and her uncontrolable liquid stools up to 7 or 8 times a day.

On examination her abdomen is grossly distended and her descending colon is easily palpable. On rectal examination the rectum is filled with soft faeces and is grossly distended. OUr district nurses have given her an Arachis Oil enema followed by 2 Microlax enemas with very little result. I feel this child needs a manual evacuation prior to any input from the psychiatrist and I should be grateful if you would see her as soon as possible.

Yours sincerely,

DR. E.A.CAVEN.

MANUAL EVACUATION.

[redacted]

ROYAL HOSPITAL FOR SICK CHILDREN

Telephone
041-201 0000

Yorkhill
Glasgow G3 8SJ

WENDY McLEISH

On examination her height was on the 10th centile and her weight was on the 3rd centile. There was no anaemia, clubbing, jaundice or lymphadenopathy. Examination of the cardiovascular and respiratory systems reveals no abnormality. Examination the abdomen I could feel a large firm faecal mass in the lower abdomen. On rectal examination the perineum was normal though there was some staining present. The rectum was full of faeces.

I feel that that her problems are secondary to constipation. I discussed her care with Dr Evans and we feel that we will need to admit her for some regular enemas as it is unlikely that we will be able to treat her satisfactorily in the initial period as an out patient.

We will be in touch following her admission.

Yours sincerely

G32 6NB

Dear Dr O'Neil

WENDY McLEISH DOB: 25 5 87 HN: 370283
46 LAMLASH CRESCENT GLASGOW G33 3XP

Thank you for sending this 7½ year old girl up to Dr Evans clinic where I saw her today. As you know she has had problems with encropesis since September 1991 when her mother unfortunately died of a heart attack. She had been seen in the Department of child psychiatry out patients but dad had not seemed to think that this had helped. Currently, she is soiling about 6-8 times a day. She is never aware of the need to pass stool though she can go to the toilet and pass stool normally in between. She also soils at night. There is the occasional episode of abdominal pain only, though she does not have a good appetite. She has no urinary problems. I note that you had tried treating her with 3 enemas but this had unfortunately not improved matters.

In August 1992 she had hernia operations. Previous to that she had been admitted for a poor appetite and failure to thrive following salmonella gastroenteritis. She also had a non accidental injury in January 1990. She was born at Glasgow Royal Maternity Hospital at term with a birth weight of 4lb 5oz. Apparently, she was in the neonatal nursery for 1 week because was small for gestational age. She has one brother aged 8 who is well. Dad has emphysema which may be related to smoking. Mum died at age 29 because of a heart attack and I hear that there are heart problems on the mothers side of the family. Currently, she is taking no medication and has no allergies and her vaccinations are up to date. They live in a ground floor flat with no pets and dad is a smoker. They have poor social circumstances in that the dad has previously been in prison in the past ~~when he was~~ and Wendy was the victim of non accidental injury by an uncle. Wendy had been on the at risk registrar in the past.

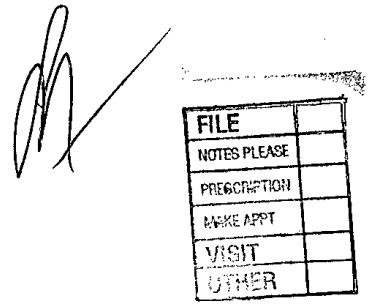
CONFIDENTIAL - FIRST CLASS

Dr. McArthur,
Abbey Medical Centre,
Lonend,
Paisley.



Dear Dr. McArthur,

Wendy McLeish (d.o.b. 25.5.87)
1/3 Beech Avenue, Paisley

Thank you for referring Wendy whom I met for the first time on the 18th of February 1994, at the Child & Family Centre, Hawkhead Hospital, with her key-worker from the Children's home, Mrs. Black. I am sorry for the delay in seeing Wendy but, unfortunately, at present the department has a waiting list of referrals.

As you are aware, Wendy and her brother Gerald, are presenting in the care of the Social Work Department and since approximately 1991, following the death of their mother Wendy has suffered frequent soiling.

Mrs. Black was able to tell me that Wendy can soil herself 6 to 7 times per day and that it can occur at school, at the home or during visits to Mr. McLeish. She went on to say that she has never known Wendy to experience enuresis and that Wendy very rarely uses the toilet independently and has to be encouraged a great deal to do so.

When I met with Mr. McLeish at Wendy's third appointment, he informed me that when Wendy lived with him she was able to use the toilet properly and that he never knew her to soil herself. He seemed keen to help deal with the problem and plans to attend further sessions at a later date.

DEPT.OF CHILD & FAMILY PSYCHIATRY XX Shemilt

MC LEISH
QENDY
46 Lamlash Crescent 25.05.87.
GLASGOW.
G33.3XP.

Dear Dr. Shemilt,

You may remember Wendy McLeish whose previous address was 5 Lamlash Square, Glasgow. G33., and then Beech Avenue childrens home, Paisley. She is now back at home for good with her father at 46 Lamlash Crescent, G33.

You previously saw her in 1991/92 and then she was taken into care in the Paisley area. During that time she was assessed at the Child and Family Centre, Hawkhead Hospital, Paisley, by a child psychologist, Lesley McFarlane.

She continues to have a problem with soiling. She soils her bed and soils whilst at school. She very rarely goes to the toilet. She manages to urinate in the toilet O.K.

She is now at primary 3 level in Lamlash Primary School and seems to be doing well at school. However she is starting to be teased about her soiling.

You may remember that this encopretic problem started when her mother died suddenly in September 1991. /I enclose

/I enclose a copy of Minutes of a child in care review from the Social Work Department dated 1993, which explains much of the background.

Wendy's father has asked me to refer her back to your care as he is unable to improve Wendy's soiling problems.

P.S. Can I draw your attention to the Social Works Report, page 3 about the childrens sexualised behaviour. Obviously this may be an important factor.

I would be grateful if you could see Wendy fairly soon.

Yours sincerely,

DR. J. O'NEIL.

[redacted]

On speaking to Wendy herself, she seems a quiet withdrawn girl who really only speaks when spoken to. I was able to find out however, that at present Wendy reports not knowing when she needs to go to the toilet and feels that she has no control over what happens. She also told me that she finds sitting on the toilet boring and wishes to play in her room.

Regarding previous management approaches, I believe that the staff in the Children's home have tried several methods; sennokot, a star chart and the use of nappies, all of which only successful it seems in the short-term.

From the information I have to date it seems that at present Wendy is suffering from severe secondary functional encopresis perhaps brought on by the emotional upset caused by the death of her mother and the move to the children's home.

I plan therefore to offer the Children's Home and Mr. McLeish advice on the following areas.

1. To encourage Wendy to use the toilet regularly and to provide her with positive attention for doing so.

2. To help them to increase Wendy's awareness of her bowel cues.

To date, Wendy has actually managed to use the toilet properly on two occasions and she is already showing an increased awareness of bowel cues. Hopefully this will continue.

I plan to see Wendy until the end of March when I will be leaving the department. At that point my colleague, Mrs. McLaren, has agreed to take over the case and will keep you informed of any progress made.

Yours sincerely

Lesley McFarlane

MEDICAL REPORT AND FUNCTIONAL ASSESSMENT OF CHILD 5 YEARS AND OVER REFERRED FOR ADOPTION OR RECEIVED INTO CARE

Child's surname ..... McLEISH ..... Forename(s) ..... WENDY .....

Also known as ..... Date of birth 25.5.87 Ref No. .....

Date of examination ..... 7-7-93 ..... Age at examination ..... 6 .....

IMPORTANT *The following information should be available to the doctor making the examination. He/she is asked to tick all which are provided*

Any recent medical report
Growth charts to date
Medical history (including record of immunisations)
Psychologist's report (if any)
Any other relevant specialist reports
Perinatal history of child
Family history of parents
List of placements/caregivers
List of nurseries/schools
Recent school report
Social work report
Profile of behavioural and emotional well-being

THE CHILD SHOULD BE ACCOMPANIED BY THE CURRENT CAREGIVER– please give name and indicate if absent.

1. Summary by examining doctor of anything in the collected information which is likely to be relevant to the child's present condition or future prospects *(eg. genetic conditions in family; obstetric or neonatal complications; disability; previous illness, accidents and operations; history of growth, development, speech and learning; traumatic events; frequent changes of caregiver etc.)*

① Requires referral to orthoptist.
② Requires Permanent placement as a matter of urgency.
③ Requires medical treatment for faecal soiling

2. Is the child attending hospital or receiving any medication or other treatment?

no.

3. PHYSICAL EXAMINATION Date 7/7/93 Age 6yrs.

Weight; 15.5 kgs ~~9~~ 25 centile. Height; 106 cms 9 centile.

Head circumference; 49.5 cms centile

	General appearance/impression of child *(note any dysmorphic features)*

4. FUNCTIONAL ASSESSMENT

a. Gross motor	normal
b. Visual and fine motor	fine motor normal. ? visual acuity.
c. Language and speech i. attention span ii. comprehension iii. expressive language/ articulation	normal for age.
d. Behaviour during interview i. rapport ii. co-operation iii. awareness and general understanding	Good Good ~~Good~~ good.

Overall impression

pretty cooperative young child requires help to facial sorting & emotional problems She has potential which will only come to fruition if a stable family live can be achieved.

GENERAL CONCLUSIONS AND RECOMMENDATIONS *(taking account of history, functional assessment, specialist reports and profile of behavioural and emotional well-being)*

Are there any problems in relation to the following areas? *(If 'yes' specify nature of problem and indicate what action is required)*

	Yes/No	Comment	Action required
Gross motor	NO		
Fine motor	NO		
Language and speech	NO		
Behaviour	NO		
Learning	NO		
Relationships		I am unable to comment as I have only met her once	
Any other observations?		obviously very attached to brother

PRIVATE AND CONFIDENTIAL **ANNEX TO FORM D**

PROFILE OF BEHAVIOURAL AND EMOTIONAL WELL-BEING

IMPORTANT NOTES

1. This form should be completed by the child's main caregiver or by the social worker from information *provided by the main caregiver.* Please answer by ticking as appropriate and by adding any comments in the spaces provided.
2. In thinking about this child's behaviour etc., caregivers are asked to compare the child with other children of similar age and not just with children in care.

Child's name Wendy McLeish Date of birth 25.5.87 Age 6yrs.

Name of caregiver Beech Ave, Children's Home Relationship to child

Experience of child care Length of contact with child 6months

Name of social worker Rikki Sneddon Length of contact with child

Profile completed by V. King & M. Black Date 08/06/93

1. What is this child like to live with and bring up? *(Please answer this question in your own words before turning over the page)*

Wendy is a pleasant girl who gets on fairly well with her peer group. She includs to day dream, and be stubborn if not getting her own way. She can withdraw if things don't go well for her.

She suffers from soiling - this identified prior to admission. Lately this has worried Wendy as she claims she does not know when she is soiling herself.

Apart from this she is a happy, lively and affectionate girl who presents very few problems.

2. EVERYDAY LIVING

How would you describe this child?

Well able to look after ~~him/~~herself at home	☐
No more problems in everyday life than most of the same age	☑
Definite problems in everyday life/needs a great deal of looking after	☐

tick one box

Problems encountered — tick any which apply

Eating :	*poor appetite*	☐	*Belongings :*	*destructive of own things*	☐
	very greedy	☐		*destructive of other's property*	☑
Sleeping :	*disturbs others at night*	☐	*Toilet training :*	*wets bed regularly*	☐
	nightmares	☐		*day time wetting*	☐
	afraid of the dark	☐		*soiling*	☑

Any further comments about everyday living? Wendy is a good eater, will try unknown foods - however tends to pick at food - wanting to use fingers rather than cutlery

3. RELATIONSHIPS

a) How does this child get on with other children?

Very popular, plenty of friends	☑
Has a few good friends	☐
Some difficulty with others but no more than most other children	☐
Definite difficulties in getting on with other children	☐

tick one box

Type of difficulty with other children — tick any which apply

Shy or ~~fearful of~~ others	☑	*Cruel to animals or small children*	☐
Aggressive or very bossy with others	☐	*Solitary, happy with own company*	☐
Always falling out/can't keep friends	☐	*Lonely*	☐

b) How does this child get on with adults?

Affectionate and rewarding child	☑
Some difficulties but not more than most children	☐
Definite difficulties in getting on with adults	☐

tick one box

Type of difficulty with adults — tick any which apply

Little interest in or concern for adults	☐	*'Hard to reach', reserved at first*	☐
No close relationship with an adult	☐	*Indiscriminately friendly*	☐
Excessive interest in adults of other sex	☐	*Excessively clinging*	☐

Any further comments on relationships? Wendy has to build up a relationship with members of opposite sex, where she is more free with female staff.

4. EMOTIONAL STATE

How would you best describe this child?

Happy and enjoying life	☐
Coping well but with some signs of strain	☑
No more emotional problems than others of this age	☐
Definitely more emotional problems than other children	☐

tick one box

Type of emotional problem — tick any which apply

Anxious about new things / reacts badly to change	☐
Shows no reaction to changed circumstances	☐
Worries excessively about particular problems	☑
Withdrawn / hard to communicate with	☐
Seems unduly or inexplicably sad	☐
Worries very much about own health or complains a lot about minor things	☐
Has unusual or worrying habits e.g.	☐

Any further comments on emotional state? Wendy appears acknowledge her caring but has difficulties with controlling it.

5. BEHAVIOUR

How would you best describe this child's behaviour?

Good	☐
No more problems or just about as naughty as others of same age	☑
Definitely more problems than others of same age	☐

tick one box

Types of behaviour problem encountered — tick any which apply

Disobedient	☐	*Tantrums*	☐
Very fidgety or restless	☐	*Stealing*	☐
Quarrelsome	☐	*Telling lies*	☐

Difficulty in accepting family rules/ parental guidance (e.g. about friends, sex, alcohol, smoking, drugs, solvents etc) ☐

Any further comments on behaviour? .....

.....

.....

.....

.....

.....

6. SCHOOL

How do you find this child reacts to school?

Enjoys school and takes it all in ~~his~~/her stride	☐
Copes with school as well as most other children	☑ *tick one box*
Has definite problems in attending or coping with school	☐

Type of school problem encountered — tick any which apply

Distressed about going to school	☐
Inclined to play truant or 'skive' lessons	☐
Has many aches and pains on school days	☐
Worries or has great difficulty concerning school or homework	☐

Any further comments on school? Wendy enjoys school. She has worked hard and is progressing very well.

.....

.....

.....

7. POSTSCRIPT

Is there anything else you want to mention?

We do staff, are concerned about Wendy's toiletting as much as she does and need guidance on this matter.

SUMMARY OF DISCUSSION

INTRODUCTION

Colin McIntosh chaired today's Review explaining that Gerald and Wendy had been in care since April 1992, with foster parents. During a period of planned extended access the children were returning home on Christmas Eve 1992, but in view of the fact that their father and two other adults in the house were found to be drunk, the children were removed from the family home. They were unable to return to their foster parent's care because of an incident involving Gerald and the foster father.

The children were placed in Beech Avenue Children's Home where they have remained to date. Mr McLeish, the children's father, was invited to today's Review and arrangements had been made by the Area Team to bring him to Beech Avenue for the Review. He did not turn up at the arranged time nor has he been in touch with anyone to say why he was unable to make today's Review.

SOCIAL WORKER'S REPORT

Rikki Sneddon, Social Worker, confirmed that Gerald and Wendy have, over the past six years, been in the care either of the Social Work Department or placed with friends and relatives when Social Workers have had to intervene because of concerns regarding parental care of the children. In September 1991, the children's mother died, and since then Wendy has had a pattern of soiling herself, sometimes six or seven times a day. Sometimes this improves, other times Wendy regresses. Wendy, in Rikki Sneddon's opinion, adjusts more quickly to her periods in care and accepts the change in her adult carers. Gerald on the other hand has become much more aggressive and confused about what is happening in his life since April 1992. Gerald regularly asks for his father and when he can go home. In his last foster home placement, Gerald would punch and bang his head against walls. He would urinate and defaecate in his bedroom rather than in the toilet.

In his last school Gerald was in regular conflict with his peers. He had to be monitored carefully, taken to school and was always supervised at playtime or lunch break because he was unable to set limits on his behaviour.

According to Rikki Sneddon, Wendy continues to soil herself since coming to Beech Avenue, and Gerald is in conflict at his new primary school with other children. Gerald continually asks what is going to happen to him.

Regarding Mr McLeish; while he has always fulfilled all the expectations of the Social Work Department to attend alcohol counselling (this being his fourth referral) there have always been serious concerns about Mr McLeish's inability or unwillingness to take on board that he is unable to protect his children from the adults who spend time in his home. Mr McLeish is well aware of the Social Work process but it is difficult to monitor how far he has kept clear of alcohol or how far he understands that he jeopardises the care of his children by the company he keeps.

There has always been alcohol related to the children's removal from the care of their parents yet because Mr McLeish co-operated a further attempt at rehabilitation was made since August 1992. The Department became aware that Mr McLeish developed a relationship with Christine Lloyd in September 1992 and because Mr McLeish was talking about marrying Christine Lloyd, she became involved in accepting the "intrusive" nature of the Department's attempt to ensure that she and Mr McLeish would act responsibly and be mindful of the adults within the family home. Christine Lloyd was found to be drunk, along with Mr McLeish, on the day that the children were coming for a period of extended leave over Christmas.

RESIDENTIAL REPORT

Isabel Gourlay, keyworker at Beech Avenue said that when Wendy arrived she was quite withdrawn, but seemed relieved to be there. Wendy continues to soil; some days are much worse than others. She is a poor eater, but is improving. There are no medical problems. Wendy needs stability and set routines. She enjoys the other children in Beech Avenue; likes her primary school; and enjoys her homework. She does not ask for or speak about her dad. When he telephones she only speaks for a few minutes, but does not discuss any of this afterwards. Her soiling was seen to worsen after her dad's telephone calls.

Gerald also seemed relieved to be at Beech Avenue. He is not so settled. His aggression comes from nowhere; there is no reason for it, nor does anyone or anything appear to trigger it off. He bangs his head; kicks things and fights with other children. He now comes home for lunch to avoid the confrontations in the playground with other children.

Whenever Gerald talks about his father to staff he does so in an aggressive manner, for example, "my dad will kick your head in". He is very erratic in the things that he does. One example quoted by Donny Rankin, Officer in Charge, was when Gerald was ready for school. He was chatting away to Donny, and then, for no reason, he disappeared, changed into his pyjamas and decided he was not going to school. It is usually clear why Wendy does what she does, but with Gerald it remains a mystery.

Concern was raised over both Gerald and Wendy's sexualised behaviour which has been noted at Beech Avenue and also in the previous foster home. The children have talked about the game of "shagging". Gerald was able to give a graphic description of what this meant. Also, on another occasion, Gerald was found on top of Wendy who had her legs open. Rikki Sneddon explained that the children's maternal aunt commented that on two occasions, back in 1990, she saw Gerald on top of Wendy. Prior to Mrs McLeish's death, it was known that she was a prostitute, so there is concern about what Gerald and Wendy have witnessed inappropriately.

The sexual language of both children is very profound. It is not simply "dirty talk". Gerald has mentioned to staff that he has learned this language from people going into the family home.

Medically Gerald is fine. There is a need for a new RIC3 book for Beech Avenue. Either a new signature on the booklet is required from Mr McLeish or the previous booklet should be obtained.

COMMENTS FROM RONNIE INCH, ALCOHOL COUNSELLOR

He was both disappointed and concerned that Mr McLeish had not turned up for today's Review. Ronnie Inch believes that Mr McLeish has been consistent in his motivation to attend for counselling in order to have his children home. He believes that the incident on Christmas Eve should be viewed as an unfortunate "hiccup" from which Mr McLeish can learn. Any of the access visits prior to this had been successful with neither Rikki Sneddon nor the Homemakers involved detecting any drinking. Ronnie Inch believes Mr McLeish when he says that he is not taking or abusing drugs nor alcohol. Ronnie feels that Mr McLeish has tried hard and that there have been changes in his attitude. He believes that there is a need to put the Christmas Eve "lapse" into perspective.

Colin McIntosh accepted that in any decision making process we would take this into account but given the history of the children's need for alternative carers, at least six times in the past six years, we have to look at the implications of this and acknowledge that these resulted from lapses into further abuse of alcohol.

SCHOOL REPORT

Sandra Gibson, Head Teacher at Todholm Primary described Gerald and Wendy as very attractive children. They visited her school on the Friday prior to starting and she checked with their previous Head Teacher. Todholm Primary is an infant school (Primary 1 to Primary 3) so the children are little and unaccustomed to aggressive behaviour. In order to divert a crisis Gerald and Wendy now come home to Beech Avenue for lunch. In class Gerald has difficulty in co-operating or sharing with other children. Gerald clearly thinks the world of his dad and he sees the word "rage" as being an appropriate word to describe Gerald's anger at school. Apparently once Mr McLeish had started to contact Gerald by telephone at Beech Avenue and then stopped, his behaviour deteriorated at school. Wendy is more settled than Gerald. She has settled well in class and is quiet, yet she can hold her own in her peer group.

FUTURE PLANS

Colin McIntosh confirmed that in the medium term plans would involve obtaining an appropriate placement for both children, given that they were now likely to remain in care for a period of time. Longer term plans would have to take into account the fact that the children have had six or seven receptions into the care of the Social Work Department and three placements informally with relatives and friends over the past six years. The events of Christmas Eve 1992 were no different from a similar situation in 1987 with Mr McLeish denying that he was drunk and "stonewalling" the workers involved with him. Four appointments have been made with Mr McLeish in the three weeks after the children's reception into care. He has been available for one interview which proved to be unproductive.

It was evident that no one appears confident that a plan for rehabilitation is appropriate any more. There is an increased level of disturbed behaviour from the children and a great deal of anger around for them. Mr McLeish has spoken to staff on the telephone but he has made no attempt to find out where the children are.

There is a need therefore to arrange a Planning Meeting with staff at the Child Care Team in North East and Strathkelvin District to decide whether or not advice should be sought from our Legal Department regarding grounds for permanent alternative care.

Both children have responded well to the care from staff in Beech Avenue and they feel safe and secure. We would be requesting at this point that Gerald and Wendy remain in Beech Avenue at least until a planning meeting could evaluate and establish whether or not Gerald and Wendy require a long or short term placement.

Meantime, in view of the level of disturbing behaviour coming from both children, it was agreed that the original referral to the Department of Child and Family Psychiatry should be pushed despite the uncertainty of future plans for the children. Sandra Gibson, Head Teacher, confirmed that she would seek advice from the Educational Psychologist who comes to her school. Also, Rikki Sneddon will talk to Psychological Services in Easterhouse to find out how we deal with children who have moved outwith their original area. In the short term, we will request Yorkhill to see the children on their own rather than involve their father.

There is the issue of the sexualised behaviour which has been around for a while but has had to take a back seat because of all the distress surrounding the children remaining in care and moving placement. Any concerns for the moment will be recorded and picked up in the context of normal contact with the children during visits from Rikki and the Social Work Assistant involved.

ACCESS

To date the children have been subjected to erratic and unpredictable contact from their father. These calls which only last minutes appear to be having adverse effects on the children. Wendy's soiling has increased sharply, whereas Gerald who is expressing an overt commitment to his father is upset when the expected calls do not happen. He needs and would benefit from regular contact with his father. It appears that Mr McLeish is avoiding contact with the Department.

There is a need to respect Mr McLeish's rights to access, but he has to get back into a routine of regular access. If he wishes to telephone then there will be set times, such as Monday, Wednesday, Friday, so that the children will be clear. Also, that once a week, supervised access can be offered at Beech Avenue. If Mr McLeish is sober then he can have access in the Children's Home. This access will be supervised so that Rikki Sneddon can observe how motivated Mr McLeish and Christine Lloyd are. Also, Mr McLeish must be clear that the access is not, at this point in time, a route for rehabilitation. We are seriously looking at whether or not these children require permanent alternative care. In the short term, access will be defined by residential and fieldwork staff while looking at other issues.

DECISIONS

1. Gerald and Wendy should remain in care at Beech Avenue meantime where they appear to have settled.

2. A Planning Meeting to be held with a member of the Child Care Team at North East and Strathkelvin District to discuss how the children's future needs can best be met.

3. Referrals to be made to Psychological Services both in Renfrew and Easterhouse. Also a referral to the Department of Child and Family Psychiatry.

4. Access: Once a week, supervised at Beech Avenue.

   Telephone calls on a planned basis.

5. Alternative resources to be explored by staff at North East and Strathkelvin District.

DATE OF NEXT REVIEW

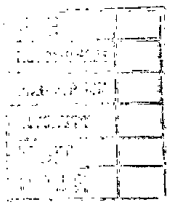
Dear Dr McArthur,

Re: Wendy McLeish
1/3 Beech ave
Paisley 05.5.87



Wendy was seen at the Russell Institute and found to have reduced vision in both eyes, R- 6/12 L- 6/18. There was no squint noticed and instead of refering her to our own opt, the staff at the home had already arranged an opticians app for the next day. I have not arranged to see her again unless the opt felt there was a need for further Orthoptic assessment.

Yours sincerely

Mrs Diane Russell

23rd December, 1991.

Mr Ricky Sneddon,
Social Worker,
North-East 5 Area Team,
81 Ruchazie Place,
Cranhill,
G33 3HA.

Dear Mr Sneddon,

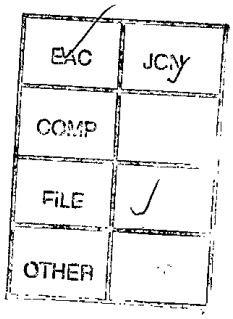
Re: Wendy McLeish d.o.b. 25.5.87
5 Lamlash Square, Glasgow, G33.

Thank you for keeping me informed with the Social Work input regarding the McLeish family. As you are aware Dr O'Neil, G.P., referred Wendy to D.C.F.P. on 12th November, 1991. I have seen the family, consisted of Mr Gerald McLeish (35 years), Gerry (5 years) and Wendy (4 1/2 years) on two occasions (29th November and 12th December, 1991).

After the first session, it was decided that both Wendy and Gerry would be offered individual play/psychotherapy for 4-6 sessions until the end of January 1992. This was in a view to brief therapy regarding Gerry's bereavement reaction (he has had behavioural problems at school) and therapy for Wendy who was showing emotional distress in her bereavement reaction, displacing her grief into soiling.

I have arranged to see Gerry on:
19th December, 1991 at 2 pm
24th " " 11 am
31st " " 11 am
7th January, 1992 at 11 am

Dr Anne Alcorn has arranged to see Wendy on:
24th December, 1991 at 10 am
21st " " 10 am
7th January, 1992 at 10 am
14th " " 2 pm
21st " " 10 am
28th " " 10 am



Mr Ricky Sneddon (2)

Re: Wendy McLeish d.o.b. 25.5.87

I understand that Wendy and Gerry are presently in temporary foster care, as their father was in prison, temporarily, therefore, their future together as a family unit at present is uncertain.

In view of the change in circumstances we hope our playtherapy will function in providing a more detailed assessment of their individual needs.

Although we will be discharging the family at the end of January, 1992 we would like to express concern regarding an adequate plan for their care in temporary fostering and the uncertainty of father's position to care for them in the long-term. Whilst this uncertainty continues the children are likely to continue having emotional distress, e.g. soiling.

We feel that the situation is best dealt with by attending to the children's direct need for stable care and psychiatric treatment is unlikely to be effective until the care situation is stabilised.

Yours sincerely,

Morag McFadyen

Ward 6B
R.H.S.C.

Dear Dr Evans

Re: Wendy McLeish
5 Lamlash Squa

Thank you for refer me. I saw Wendy and her mother, Miss essment on 5th February.

Wendy was referred from the Ward in September 1990. There was worry about her lack of communication and social skills. Apparently these difficulties had abated by the time Wendy was discharged from the Ward, but an Out-Patient appointment was considered appropriate.

On assessment, Wendy appears small for her age. After brief initial shyness, she communicated easily and well. Mrs O'Donnell suggested no behavioural difficulties in the home. Sleeping and eating behaviours appear normal.

I followed the assessment with a discussion with Wendy's nursery school teacher. The teacher agreed that Wendy's development appeared normal and that there were no behavioural difficulties present at the school.

Miss O'Donnell has the services of both a Social Worker and Health Visitor and will use these services as required.

I have therefore discharged Wendy from this clinic.

Thank you for your attention to this letter.

Yours sincerely

Mr Michael Killoran Ross
Psychologist

r O'Neil, 979 Carntyne Road, GLASGOW G32 6LY.

MEDICAL REPORT & DEVELOPMENTAL ASSESSMENT OF CHILD UNDER 5 YEARS REFERRED FOR ADOPTION OR RECEIVED INTO CARE

Child's surname MCLEISH Forename(s) Wendy

Also known as Date of birth 25.5.87 Ref. no.

Date of examination 1.5.92 Age at examination 4 yrs 11 mths.

IMPORTANT *The following information should be available to the doctor making the examination*

- *Any previous medical report* ✓
- *Neo-natal report/Obstetric report* ✗
- *Medical history (inc record of immunisations)* ✓
- *Growth charts to date* ✓
- *Family history of parents* ✓
- *List of placements/caregivers* ✓
- *List of nurseries etc* ✓
- *Any relevant specialist reports* ✗

THE CHILD SHOULD BE ACCOMPANIED BY ITS CURRENT CAREGIVER

1. Summary by examining doctor of anything in the collected information which is likely to be relevant to the child's present condition or future prospects *(eg genetic conditions in family; obstetric or neonatal complications; disability; previous illness, accidents and operations; history of growth, development, speech and learning; frequent changes of caregiver etc.)*

Natural mother died aged 29 3/4 yrs in Oct 91 from coronary thrombosis. Father has only one lung. He has a history of alcoholism + violence. Has been RIC for up to 7 months at a time on 4 occasions since the age of 18 months.

Is the child attending hospital, clinic or other special unit or receiving medication or other treatment?

No.

3. Comments from current caregiver on child's well-being and behaviour
(Please give name of caregiver. Indicate if current caregiver is not present)

Caregiver not present but Mr Ricky Sneddon children's SW. who knows them well was present. Wendy attends Pollok Children's Centre every afternoon.

Dear Dr Ahmed

RE: WENDY McLEISH (DOB: 25.5.87) HOSP NO: 370283
5 LAMLASH SQUARE GLASGOW G33.

I saw Wendy at the Out Patient Clinic on the 22nd of October 1990. She has no symptoms according to her mother and she indeed looked very well and had gained a further three quarters of a Kg. This givs her a reasonable growth and I have therefore, not arranged any further medical follow up but would be pleased to see her again in the future if there is concern.

When she was initially admitted to hospital there was much concern particularly from the nursing staff that Wendy might be developmentally delayed though in retrospect I think this was mostly related to her reaction to coming into hospital. A formal assessment will be made in February 1991 via the hospital's Clinical Psychology Department.

Yours sincerely

T. J. Evans
Consultant Paediatrician.

GLASGOW
G32 2ES

Dear Dr Ahmed

RE: WENDY McLEISH (DOB: 25.5.87) HOSP NO: 370283
5 LAMLASH SQUARE GLASGOW G33.

Admitted: 17.9.90
Discharged: 25.9.90 Diagnosis: Samonella gastroenteritis

Wendy was admitted as an emergency on the 17th of September 1990 with a history of vomiting, anorexia and diarrhoea.

We knew that there had been assessment from the Social Work Department and that the child had possibly suffered from non-accidental injury in the past but initially the case record folder was not available for details.

By the time Wendy was admitted she was starting to recover from what proved to be a samonella gastroenteritis. We were concerned that initially Wendy was very quiet and non-communicative and that she was also small with a height between the 10th and 25th centile but a weight way below the 3rd centile. Part of this was presumably dehydration and at least temporary malnutrition from her illness. Her weight in the ward during her recovery showed a rapid increase back to the 3rd centile (11.8 kg.).

She also greatly improved in her behaviour and appeared probably of normal intelligence for her age. We were able due to the help of Wendy's Health Visitor, Mrs Swanson, and previous records of Wendy's weight in hospital to see that she had always been below the 3rd centile for weight on her measurement taken when she was just over 18 months when it had risen to between the 10th and 25th centile. The next recording that we had showed her to be just above the 3rd centile. I suspect that there is probably not an on going pathological cause for her smallness but I thought it would be prudent to see her and check her weight again in about a month.

GLASGOW
G33.

Dear Mr. Sneddon,

Wendy McLeish - H.N. 370283

You will recall that when this little girl was being considered at the Case Conference, several of those present, described their impression of her being unduly slow, even allowing for the effects of environment, and lack of stimulus, and clinically she had a faintly Mongoloid appearance. It seemed advisable to exclude a mild form of Down's Syndrome.

This has now been done by chromosome analysis, and a completely normal female Karotype has been found, thus excluding any likelihood of Down's Syndrome.

Yours sincerely,

W. Cochran,
Consultant Paediatric Surgeon.

5th January, 1990

Dr. Ahmed,
Townhead Health Centre,
Alexandra Parade,
GLASGOW.

Dear Dr. Ahmed,

Wendy Mcleish - d.o.b. 26.5.87 (370283)
c/o McArthur, 23 Baldovan cres., Glasgow 22.12.89 - 29.12.89.

Wendy was admitted through the A. & E. Department on 22.10.89 having been referred on from the Victoria Infirmry. She was brought by her Aunt's cohabitee with whom she had been deposited earlier, while her mother was engaged elsewhere.

She presented with a massive haematoma extending from the right ear across the cheek and both orbits. The initial explanation was that she had been struck on the face by her 3½ year old brother with a plastic toy, the day before. There were several conflicting explanations. I did not consider the injuries consistent with the history given, particularly when further bruising of the right thigh consistent with strong grip marks were found, and suspicion of Child Abuse, was raised. The Social Work Department was involved, and the child was detained here (latterly with her brother) under a "Place of Safety Order".

During her stay there was rapid resolution of her injury. No evidence of facial bony damage was detected, and a selective skeletal survey showed no bone damage elsewhere. Likewise haematological and coagulation studies showed no basis of suspicion of an undue tendency to bruise or bleed into the tissues.

An S.W.D. Case Conference was subsequently held at Ruchazie Centre because of certain aspects of the home circumstances, and circumstances of her injury. Extended care arrangements were made, and she was discharged into the care of the Social Work Department.

Because of her apparent rather slow and retarded development (? lack of environmental stimulus) Karyograms were requested and will be reported in due course

Yours sincerely,

W. Cochran,
Consultant Paediatric Surgeon.

REPORT

Eamon Kearney opened today's Review Case Conference by asking everyone to introduce themselves and by explaining that the purpose of the conference was to make decisions for the future wellbeing of Wendy and Gerald McLeish/O'Donnell.

Rikki Sneddon gave a brief update on the family since the last Case Conference - Kathleen O'Donnell had left Wendy and Gerald in the care of her sister (Georgina O'Donnell) - Christmas 1989. Wendy had sustained injuries of a serious nature and children's names were placed on register at risk of physical abuse. After a period of 4 weeks, the children returned home to the care of their mother and Rikki has since monitored the situation at home.

Kathleen O'Donnell appears to have more interest in her children now. She gives them toys and games to play with and she has now a more positive relationship with the children. Kathleen has received a Community Care Grant which she has put towards redecorating the house. She also has a closeby neighbour who is very supportive.

Both children are doing well. Wendy has been attending Ruchazie Creche and Gerald is attending Cranhill Nursery. This gives Kathleen a half day to herself and gives her time to get her shopping in. Wendy is due to start Cranhill Nursery next week and Kathleen feels it would be better if Gerald and Wendy were in the same class at Nursery as they play well together..

Rikki Sneddon mentioned that he had minor cause for concern over Wendy's weight loss.

May Swanson said she has no cause for concern over Wendy's weight at the moment. She is a slim girl growing upwards. She is not a great eater but her diet is adequate.

Gerald has a little problem in that he soils occasionally but this is almost under control. It may be caused by stress or it could be laziness. May would hope that Gerald's soiling should disappear by the end of the year.

May Swanson feels that Kathleen and her children are far less stressed now. Both children have a steady life and are more secure. There is a more relaxed atmosphere within the house.

Carol Guild reported that her visits to the family home have become more relaxed and children appear to be bright and alert. Carol has also noticed that Kathleen spends more time with her children and helps them make use of their toys.

Kathleen O'Donnell feels herself that she is coping much better now. She thinks that Gerald's soiling may be due to laziness and she does not see any signs of Wendy losing weight.

Gerald McLeish (Father of Wendy and Gerald) is presently in Glenochil Prison. Prior to Gerald going into Prison, he was a good Father to the children and Rikki Sneddon does not anticipate any problems when Gerald returns home.

DECISIONS:

1. Children's names to be removed from register
2. Children to remain on Home Supervision Order
3. Carol Guild will continue to work with family.

16 Alexandra Parade,
Glasgow. G31.

Dear Dr. Ahmed,

Re: Wendy McLeish - d.o.b. 25.5.87
Flat 5/2, 140 Charles St., Glasgow. G21.

I reviewed this 4 months old infant at my outpatient clinic today. She is keeping quite well apart from having quite a bad monilial nappy rash. Apparently the mother has tried several ointments without any success. She is smiling, focusing, shows hand regard and has also started to reach out. Physical examination showed no abnormalities but she did have quite an extensive nappy rash which was getting excoriated in some areas. The mouth was clear. The mother has been supplied with Nystan[illegible] cream to be applied 4 times daily for 10 days. I have also instructed her to try and keep the nappy area exposed as much as possible until the rash is better. The child is thriving quite well and I have made no further appointments for review

Yours sincerely,

P. Galea

Glasgow.

Dear Dr. Ahmed,

Re: Wendy McLeish - d.o.b. 25.5.87
Flat 5/2, 140 Charles St., Glasgow. G21.

I reviewed this baby who was very growth retarded at my outpatient clinic today. She is 9 weeks old and apart from being snuffly she has been doing well. I understand that she has already been supplied with nosedrops. Her mother was a little bit unsure how to feed her because the baby seems to sleep a lot but when woken up she feeds quite well.

Examination today showed no abnormalities. The child is focusing and following. She had good head control. She has occasional sunsetting of her eyes when she is looking around but there were no other signs of hydrocephalus. The head circumference is growing in proportion to the body. The anterior fontanelle was soft. Head control was very good. The child has slight pigmentation of her skin: Apparently the father is also pigmented. The mother has been supplied with Sytron syrup, 10 drops to be taken three times daily and she is to continue giving her the children's vitamin drops. A review appointment has been arranged in 6 weeks' time.

Yours sincerely,

Paul Galea

Dear Dr/Prof

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below:

This young child is at present in the care of the Social Work Department. She is emotionaly disturbed. Over the past 6yrs she has been either in the care of Social Work or placed with friends and relatives when Social Workers had to intervene because of concerns regarding parental care of the children. In September 1991 the child's mother died and since then Wendy has had a pattern of soiling herself, sometimes 6-7 times per day. her elder brother Gerald is also in care and he is also displaying emotional problems.

I should be grateful if you could see this child and also perhaps Gerald as well as the two are exceedingly close to one and other.

Yours sincerley

DR SHEILA McARTHUR
