normal in size and shape measuring 63 x 29 x 40mm. A, small anterior intramural fibroid measures about 9 x 4mm is noted. The endometrium appears normal in thickness measures 5mm. LMP - twice, in August 2015. The endometrial cavity appears to have hyperechoic lesion measures about 7, x 4 x 8mm, suggestive of an endometrial polyp. DDx: blood clot. There was slight, feeding vessels, identified on colour flow study. Both ovaries appear normal with simple follicles noted, largest measuring about 18 x 11mm, noted in the right ovary. Right ovary measures 24 x 14 x 27mm with a volume of 5mls. Left ovary measures 29 x 14 x 23mm with a volume of 5mls. Conclusion: Small intramural fibroid, Hyperechoic lesion within the endometrial cavity, suggestive of an endometrial polyp. DDx: blood clot. Recommendation: Suggest a rescan after 6-8 weeks on day 5-10 of cycle, for optimal evaluation of endometrium. Mae Navarro, Inhealth Sonographer, HCPC RA54185, Reported by : Mae Navarro / MAE.NAVARRO

Problem: Vaginal cyst
 Examination: O/E marble sized cyst palpated on outside of vagina.
 Examination: Patient had the same occur at the start of April which was successfully treated with antibiotics but has since returned. This time cyst is more tender and is slightly larger.
 Examination: Patient otherwise well.
 Comment: Patient very reluctant to have cyst drained, would like to try another course of antibiotics. 10 day course

given this time after d/w PH.

Comment: Advised that if cyst keeps reoccurring then further treatment may be necessary. Patient in agreement and happy with plan.

Comment: F/U in 7/7 to ensure cyst resolving with treatment.

Comment: Sirs,

As requested by my employer, would it be possible for me to have the following blood tests carried out as they have requested up to date results.

I need *Varicella *Rubella *Tuberculosis *Hepatitis B *Hepatitis C and *HIV.

Would you be able to assist me in this matter please ?

Thanking you in advance.

Fiona Dinsmore (DOB 28/11/69)

Clinical Details

heavy irregular bleeding every 2 wks no children and failed ivf 7 times, cause blocked tubes due to pid

Report

Transvaginal scan was performed with patient's written and verbal consent

The uterus is anteverted and appears normal in size and shape measuring 63 x 29 x 40mm. A

small anterior intramural fibroid measures about 9 x 4mm is noted.

The endometrium appears normal in thickness measures 5mm. LMP - twice in August 2015. The

endometrial cavity appears to have hyperechoic lesion measures about 7 x 4 x 8mm,

suggestive of an endometrial polyp. DDx: blood clot. There was slight feeding vessels

identified on colour flow study.

Both ovaries appear normal with simple follicles noted, largest measures about 18 x 11mm

noted in the right ovary.

Right ovary measures 24 x 14 x 27mm with volume of 5mls.

Left ovary measures 29 x 14 x 23mm with a volume of 5mls.

Conclusion:

Small intramural fibroid

Hyperechoic lesion within the endometrial cavity, suggestive of an endometrial polyp. DDx:

blood clot.

Recommendation: Suggest a rescan after 6-8 weeks on day 5-10 of cycle for optimal

evaluation of endometrium.

Clinical Details

R hypo pain severe past 5 weeks Scan 24/3/15 showed 20mm haemangioma
 Please assess

Report

The hyperechoic areas seen within the liver on the previous study is a gain noted. It measures 16 mm in diameter and again the appearances would be in keeping with a haemangioma. There is no other focal liver abnormality. Normal appearance of the gallbladder, spleen, pancreas, CBD and kidneys.

Patient's Reported Condition

NO ACCESS PROBLEMS SEXUAL INTERCOURSE ON SATURDAY BLEEDING AFTER - LARGE CLOT PALM SIZE LOWER BACK CRAMP - ABDO CRAMPS

Pathways Disposition

To contact a Primary Care Service within 2 hours (Dx05)
Selected service: St Lukes Health Centre GP led WALK IN CENTRE, Pantile Avenue, Southend, Essex

Consultation Summary

The consultation has identified:
Illness
Warm to touch
Abdominal pain associated with the vaginal bleeding
Moderately severe pain
Fever at time of assessment or in last 12 hours
Constant pain for more than 4 hours

Pathways Assessment

Pathway: Vaginal Bleeding
An injury or health problem was the reason for the contact.
Heavy bleeding had not occurred in the previous 30 minutes. User Comment: PT IS SPOTTING
An illness or health problem was the main problem. User Comment: VAGINAL BLEEDING AFTER SEXUAL INTERCOURSE - LARGE CLOT PALM SIZE - LOWER BACK CRAMP AND ABDO PAIN
The individual was not fighting for breath.
The main reason for the assessment was not a heart attack, chest/upper back pain, probable stroke, recent fit/seizure or suicide attempt.
The main reason for contact was not new confusion, declared diabetic hypo/hyperglycaemia, a probable allergic reaction or ICD shock.
The skin on the torso felt normal, warm or hot.
Pathway Selected: Vaginal Bleeding
There was no possibility of pregnancy.
Childbirth had not occurred within the previous 7 days.
There was abdominal pain as well as vaginal bleeding.
The pain interfered with normal activity.
Childbirth, miscarriage or termination had not occurred within the previous 6 weeks.
The individual had not felt faint or passed out because of the pain.
A sexual assault had not occurred.
There was no retained tampon or other vaginal foreign body.
There was a fever at the time of assessment or within the previous 12 hours.
There was no new shoulder tip pain.
There was no new, widespread, red rash.
There was no new or worsening confusion.
There was constant pain for 4 hours or more.
Instructions given were: The individual needs to contact a Primary Care Service within 2 hours.
Advice Given: Abdominal pain Fever Medication, pain and/or fever Medication, pain and/or fever, abdominal pain Vaginal bleeding Worsening

Advice Given

IF THE RECOMMENDED TIMEFRAME FALLS DURING PRACTICE HOURS: Contact the practice to arrange for the individual to be seen within 2 hours.

file://C:\Users\general\AppData\Local\Microsoft\Windows\Temporary Internet Files\... 24/08/2015

Page 1 of 2

Before you go, I will just check whether I need to give you any further instructions or advice.
 If there are any new symptoms, or if the condition gets worse, changes or you have any other concerns, call us back.
 Remember to take a list of any current medications if you go to the out of hours surgery.
 Keep a check of how many pads are used to determine the amount of bleeding.
 Don't use tampons.
 Unless advised not to, or they have already been given, paracetamol or ibuprofen can be used to relieve pain or reduce a fever. Follow the instructions in the pack. If in doubt ask a pharmacist.
 It is important to have plenty of fluids, little and often is best.
 Only wear light clothing. Don't wrap up to try to sweat out the fever.
 Don't try to cool down by cold sponging or fanning. Cooling down too quickly can cause shivering, which makes the temperature go up again.
 Becoming very drowsy, unresponsive or having a fit - DIAL 999 FOR AN AMBULANCE.
 Becoming severely ill WITH new marks, like bruising or bleeding under the skin - DIAL 999 FOR AN AMBULANCE.
 Unless advised not to, or it has already been given, paracetamol may be used to relieve abdominal pain or reduce a fever. Follow the instructions in the pack. If in doubt ask a pharmacist.
 Don't use ibuprofen or any other anti-inflammatory medication such as aspirin, as they can irritate the stomach.
 Try putting a heat pad or covered hot water bottle on the painful area.

13 July 2016

Dr Tom Keeble
Consultant Cardiologist
Southend University Hospital
Prittlewell Chase
Westcliff-on-Sea
Essex
SS0 0RY

Dear Tom

Fiona Dinsmore - D.O.B: 28-Nov-1969
47 Crescent Road Leigh-On-Sea SS9 2PF

This 46 year old lady was admitted with inferolateral ST elevation myocardial infarction on 10th July 2016 at the early hours of 3.40am. She developed anterior chest pain and was booked in for primary PCI treatment.

Procedure:

Coronary angiogram was carried out via the right wrist. The left main stem is unobstructed. The LAD is unobstructed with some muscular bridging seen in the mid segment. The circumflex artery had a thrombotic subtotal occlusion in the proximal segment. The right coronary artery was unobstructed. I carried PCI to the circumflex artery. Thromboaspiration was carried out and a 3 x 15 mm XIENCE drug eluting stent was deployed in the proximal segment. An attempt at extracting and disobliterating thrombus down the distal vessel was attempted but due to the small calibre of the distal vessel this was only partially successful. She was given intravenous Tirofiban and her inferolateral ST elevation was slow to resolve. She was put on secondary prevention in the usual manner with Aspirin and Ticagrelor 90 mg bd.

A further report will follow subsequent to her discharge from the Essex CTC.

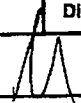

Many thanks.

Yours sincerely

Admission Date	10-Jul-2016 00:00
Discharge Date	12-Jul-2016 15:00
Sex	Female
Date Of Birth / Age	28-Nov-1969, 46 Years
Marital Status	Single
NHS number	
Hospital Number	D2105155

Diagnosis at Discharge:

Acute myocardial infarction, unspecified

Admission Method:

Other emergency Admission

Presenting Complaint / History:

Not stated

Examination Findings:

Dear Doctor

Ms Dinsmore was transferred as an emergency to Essex Cardiothoracic centre as she had chest pain and inferolateral ST elevation on her ECG. She was brought for coronary angiography and found to have a proximal thrombotic occlusion of the circumflex artery. A drug eluting stent was deployed. An echocardiogram revealed preserved ejection fraction. She was started on appropriate secondary prevention medications. She will need to take ticagrelor for one year and aspirin for life. She will be followed up locally with cardiac rehab.

Many thanks
Dr E Martyn
FY2 Essex CTC

Investigations:

Scans:

- Transthoracic Echocardiogram (11/7/16), abnormal, Normal LV size with good systolic function in the presence of mild RWMA (see LV comment). Visually estimated LVEF 55-60%.
Preserved RV systolic function.
No significant valvular abnormalities detected.

Investigations Pending:

Not stated

Procedures and/or Treatments:

10-Jul-2016, Coronary Angiography. LMS: unobstructed

LAD: unobstructed

Circumflex (Including intermediate artery if present): proximal thrombotic occlusion

RCA: unobstructed

10-Jul-2016, Percutaneous Coronary Intervention. PCI to LCx

RRA approach

6F sheath

EBU 3.5 GC; BMW wire; Hunter catheter passed; lesion directly stented with Xience 3x15mm DES to 16atm; distal branches probed with 2mm balloon followed by low inflations.
Residual distal occlusions.

Mitral Peak E	0.65	m/sec	Mitral Peak A	0.48	m/sec	
Mitral E:A Ratio	1.35		Mitral E Slope Desc T	190	ms	

Chambers

Left Ventricle	Normal cavity size and wall dimensions. Basal to mid inferior wall appears hypokinetic. Remaining segments have good systolic function. Visually estimated LVEF 55-60%. E/E' average = 7.
Right Ventricle	Appears undilated with preserved systolic function. TAPSE = 22mm.
Left Atrium	Normal cavity size
Right Atrium	Normal Cavity Size Estimated Right atrial pressure from IVC 0-5 mmHg
IAS	Intact
Ao-Arch	Normal

Valves

Aortic	Appears trileaflet. Normal structure. Good excursion. No obvious regurgitation seen.
Mitral	Mildly thickened leaflets with good excursion. No obvious regurgitation seen.
Pulmonary	Normal doppler flows noted. No regurgitation seen.
Tricuspid	Mobile leaflets. No obvious regurgitation seen.

Summary
 Normal LV size with good systolic function in the presence of mild RWMA (see LV comment). Visually estimated LVEF 55-60%.
 Preserved RV systolic function.
 No significant valvular abnormalities detected.

NHS number

Hospital Number

D2105155

Diagnosis at Discharge:

Acute myocardial infarction, unspecified

Admission Method:

Other emergency Admission

Presenting Complaint / History:

Not stated

Examination Findings:

Dear Doctor

Ms Dinsmore was transferred as an emergency to Essex Cardiothoracic centre as she had chest pain and inferolateral ST elevation on her ECG. She was brought for coronary angiography and found to have a proximal thrombotic occlusion of the circumflex artery. A drug eluting stent was deployed. An echocardiogram revealed preserved ejection fraction. She was started on appropriate secondary prevention medications. She will need to take ticagrelor for one year and aspirin for life. She will be followed up locally with cardiac rehab.

Many thanks
Dr E Martyn
FY2 Essex CTC

Investigations:

Scans:

- Transthoracic Echocardiogram (11/7/16), abnormal, Normal LV size with good systolic function in the presence of mild RWMA (see LV comment). Visually estimated LVEF 55-60%.
Preserved RV systolic function.
No significant valvular abnormalities detected.

Investigations Pending:

Not stated

Procedures and/or Treatments:

10-Jul-2016, Coronary Angiography. LMS: unobstructed

LAD: unobstructed

Circumflex (including Intermediate artery if present): proximal thrombotic occlusion

RCA: unobstructed

10-Jul-2016, Percutaneous Coronary Intervention. PCI to LCx

RRA approach

6F sheath

EBU 3.5 GC; BMW wire; Hunter catheter passed; lesion directly stented with Xience 3x15mm DES to 16atm; distal branches probed with 2mm balloon followed by low inflations.

Residual distal occlusions.

NHS number:

Hospital Number:

D2105155

Follow Up / OPD:

Please prescribe ticagrelor for 12 months (until 10/7/16) and aspirin lifelong (drug eluting stent)

Medications on Admission:

Omeprazole 20mg OD, PO Oral [Source/s: A Summary Care Record; The patient]

Discharge Medications:

New: Aspirin, 75 mg OD, PO Oral, 14 Day(s), Continue, Validated By: giauri patel
New: Ticagrelor, 90 mg BD, PO Oral, 14 Day(s), Continue, Validated By: giauri patel
New: Atorvastatin, 80 mg ON, PO Oral, Continue, Validated By: giauri patel
New: nicotine patches, 21 mg OD, TOP Topical, Monitor, Validated By: giauri patel
New: ramipril, 2.5 mg OD, PO Oral, Monitor, Validated By: giauri patel
New: bisoprolol, 2.5 mg OD, PO Oral, Continue, Validated By: giauri patel
New: Lansoprazole, 30 mg OD, PO Oral, Continue, Validated By: giauri patel
New: Glyceryl Trinitrate, 2 puffs PRN (MAX DOSE 24 HRS:*), SL Sublingual, Continue, Validated By: giauri patel

A minimum duration of 14 days treatment will be supplied unless otherwise stated. All prescriptions for antibiotics, corticosteroids and controlled drugs MUST state a specific duration.

Dear Dr Houston

Fiona DINSMORE - D.O.B.: 28-Nov-1969
47 Crescent Road, LEIGH-ON-SEA, Essex, SS9 2PF

Dictated: 28 July 2016

I saw Ms Fiona Dinsmore in Cardiac Rehabilitation pre-assessment clinic today following her Inferior Lateral MI and had Primary PCI to circumflex (1 DES) on 10/7/2016. She is physically recovering well.

I just wanted to inform you that Ms Dinsmore's Anxiety and Depression score came back high (anxiety score: 17) and (depression score : 9).

I have given her "therapy for you" contact details and I have advised her to seek help if required.

Cardiac Rehabilitation Discharge Summary

Ms F Dinsmore DOB 28/11/1969 NHS No: 494 915 9739
47 Crescent Road, LEIGH-ON-SEA, SS9 2PF

Diagnosis: MI (Stemi) PPCI Date: 10 July 2016

Rehab discharge date: 06 October 2016

Ms Dinsmore has undertaken a course of cardiac rehabilitation. 3 sessions of exercise, relaxation and health education talks were attended. A good level of exercise was achieved, working in their training heart rate range (60-75% of heart rate max).

The following risk factors have been identified:

Risk factors:	Pre event risk factors	Results/comments	Post rehabilitation risk factors.
Family History	Yes	Grandfather MI RIP	Yes
Diabetes	Not diabetic		No
Smoker	Yes	Stopped smoking since event	Yes
Hypertension (High Blood pressure) B/P	Yes	B/P 106 / 70 mmHG Date 7/9/2016 Aim for B/P < 130/80	Yes - treated
Cholesterol Total Ratio Date	Yes 5.60 6.90 10 July 2016	Aim for Total cholesterol < 4.0 mmols Cholesterol ratio < 4.0 mmols <u>Note</u> If Cholesterol result > 7.5mmol consider Hyperlipidaemia	Yes - treated
High Fat Diet	No	Daily portions fruit and vegetables Pre - Post -	No
BMI Waist Measurement	No 20.6	Aim for BMI 18.5 - 25 Waist measurement; Females < 80cms (32 inches)	No

Rehab discharge 2x weekly 2016 v.1 for Ms Fiona Dinsmore generated by
elizabeth.manning on 17-10-2016 10:10

Chairman,
Alan Thomas CBE
Chief Executive,
Jacqueline Thornton

www.southend.nhs.uk

Excess Alcohol	0	Maximum recommended units weekly - 14	No
Physical Inactivity	No	Aim for minimum 150 minutes of moderate physical activities per week.	No
Stress	Yes - work (Pre rehabilitation)	Therapy for You card given Yes	Yes
Anxiety Score	17	Anxiety & Depression HAD Scale	Not known
Depression Score	9	<8 normal 8-10 borderline 11+ treatment advised	

NB: Boxes above maybe blank if no information is available at time of discharge.

Patient states that all medication being taken as prescribed: Yes
Ejection Fraction 55-60% Date.11/7/16

Personal goals: Return to work / Return to swimming
Future exercise plan: Not known
Further comments: This lady didn't complete the programme with us due to unknown reasons.

The patient has been advised to attend your surgery annually for ongoing BP, cholesterol, weight and lifestyle assessment.

We are now discharging the patient into your care.

Yours sincerely,

R. Hernandez-Aguirre CNS

27 January 2017

Dear Dr Houston

Fiona Dinsmore - D.O.B.: 28 November 1969
47 Crescent Road, LEIGH-ON-SEA, Essex, SS9 2PF

Clinic: Cardiology Clinic (TRKGC)
Clinic Date: 22 January 2017

Diagnosis:

Inferior STEMI, 10th July 2016 with primary PCI to circumflex artery and with deployment of 3 x 15 mm Xience drug-eluting stent

Medications:

Lansoprazole 30 mg
Ramipril 2.5 mg
Ticagrelor 90 mg bd
Aspirin 75 mg
Atorvastatin 80 mg
Bisoprolol 2.5 mg

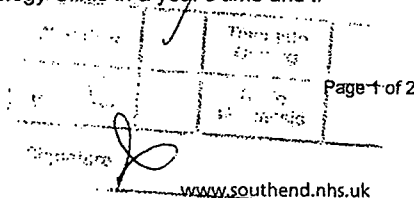

I reviewed Fiona Dinsmore in the Cardiology Outpatient Clinic today. She suffered an MI last year and had a primary PCI to her circumflex artery. Since then, she has been doing well with the occasional niggles but there are no major symptoms.

She continues to smoke and I would be grateful if you could refer her to a Smoking Cessation Service. Blood pressure recorded was 120/70 and a heart rate of 67 beats per minute. Heart sounds were normal and chest was clear with no signs of fluid overload.

I would be grateful if you could discontinue her Ticagrelor one year from the date of her procedure. She should continue with the rest of her medications from then on. I will arrange for her to be reviewed in the Cardiology Clinic in a year's time and if

Fiona Dinsmore (H023052)

Chairman:
Alan Tobias OBE
Chief Executive:
Sue Hardy

Fiona Dinsmore (H023052)

everything is satisfactory we will discharge her back to your good care.

Yours sincerely

Dr Mohammad Ali Khan
Speciality doctor in Cardiology

Dear Dr Houston

Fiona DINSMORE - D.O.B.: 28-Nov-1969
47 Crescent Road, LEIGH-ON-SEA, Essex, SS9 2PF

Dictated: 08 July 2017

Typed: 25 July 2017

I reviewed Mrs Dinsmore in AMU today.

Workflow	☒	Template Coding
Non Workflow	☐	Code Diagnosis
Signature		

This 47 year old lady had a posterior STEMI in July 2016 for which she had primary PCI to the left circumflex artery. The right coronary artery and left anterior descending artery were noted to be unobstructed on coronary angiogram.

From the cardiac point of view this lady has done well following the myocardial infarction. She has significantly cut down on her smoking and is also back to work part time as a nurse. She has on-going medical issues especially depression and anxiety.

Yesterday at about 6.00 pm she had a heated argument with her ex-partner during which she became very agitated and anxious. At that stage she noticed mild retrosternal tightness which subsequently improved but she still has mild vague chest tightness and otherwise feels back to normal.

On examination this lady with a low BMI otherwise appeared in good general health and her cardiovascular examination was entirely unremarkable. Blood pressure was in the normal range and her chest X-ray shows a small heart and hyperinflated lungs (the lungs are significantly hyperinflated and she may well have an element of smoking related COPD). Her three ECGs show sinus rhythm with sinus bradycardia and no acute ischaemic ST changes. Moreover the plasma troponin level (checked twice) is in the normal range.

I have reassured Mrs Dinsmore that from the cardiac point of view she appears to be well and it is highly unlikely that her present episode of chest pain is precipitated by myocardial ischaemia. I have suggested that she must maintain adequate fluid intake. Moreover if she feels generally well on mobilising then from the cardiac point of view she can be discharged home today.

With best wishes,

Chairman:
Alon Tobias OBE
Chief Executive:
Gare Penniker

05 September 2017

Dear Dr Houston

Fiona DINSMORE - D.O.B.: 28-Nov-1969
47 Crescent Road, LEIGH-ON-SEA, Essex, SS9 2PF

Dictated: 04 September 2017

This lady attended the department with angina symptoms and I understand that she was seen by the cardiologist who arranged the a stress test.

I have the results of the test conducted on 17 August. The conclusion was that the patient did exercise for two minutes on the Bruce protocol reaching 78% of the target heart rate. The test was stopped due to fatigue.

The patient reports no chest pain and the heart rate and blood pressure responses were appropriate to exercise.

There have been no significant changes seen and she made an uneventful recovery.

The above results are reassuring and I think the decisions are for her to remain on the usual anti-angina medication and she should be referred back to the cardiologists if the symptoms worsen in the future.

Yours sincerely
