Dear Sir/Madam

Re: Subject Access Request under the General Data Protection Regulation

Patient: SEAN MCGUIRE **D.O.B: 01/12/1983**

Thank you for your request received **1st June 2026** in which you seek a copy of your client's personal information.

Your request has been dealt with in line with our requirements under Article 15 of the General Data Protection Regulation and I now attach the following:

QUEEN ELIZABETH UNIVERSITY HOSPITAL – NEW VICTORIA INFIRMARY – WEST AMBULATORY CARE HOSPITAL
PLEASE NOTE ANY RADIOLOGY WILL FOLLOW VIA EMAIL LINK

Please be aware that these health records have been reviewed by a clinician and any information identifying or provided by a third party has been removed.

We process personal information to enable us to provide healthcare services for patients; support and manage our employees; to carry out research and clinical trials; maintain our accounts and records and to carry out data matching under the national fraud initiative. We also use CCTV systems for crime prevention.

This personal information can be both clinical and non-clinical in nature and can include

- Patient health records, photographs or radiology images
- Video/telephone recordings, including CCTV images
- Witness statements
- Incident reports
- Complaints files

- Emails

The source of our data includes Patients, General Practitioners, Healthcare, Social and Welfare organisations, Legal representatives and Police forces.

We sometimes need to share the personal information we process with the individual themselves and also with other organisations as listed above. Where this is necessary we are required to comply with all aspects of the General Data Protection Regulation.

Where these organisations are based outside Europe we take all appropriate safeguards to protect your information.

Health records are kept for a limited time and this is noted below for your information

- Adult general hospital records – six years after the date of last entry
- Maternity records – 25 years after the birth of the last child
- Children's and young people's records – until the child or young person's 25th birthday.
- Mental health records – 20 years after the date of the last contact

If you have any queries, please do not hesitate to contact us.

If you are unhappy with how your request has been dealt with please contact the NHSGGC Data Protection Officer. Their contact details are noted below:

Data Protection Officer
Information Governance Department
NHS GG&C – 2nd Floor
1 Smithhills Street
Paisley

Admission

Admitted:	22/02/2013 01:58
Discharged:	23/02/2013 15:30
Admission Type:	In Patient
Discharge to:	Private Residence - living with relatives or friends
Consultant:	Dr Dan Lassman
Specialty:	General Medicine

Reason for Admission: Admission for treatment - Where the patient is expected to be treated for a diagnosed condition not otherwise specified

Diagnosis

Clinical Comments:

ADMITTED – 21 02 13

DISCHARGED – 23 02 13

DIAGNOSIS – intentional overdose of Paracetamol, Ibuprofen, Codeine

DISCHARGE MEDS – nil

FOLLOW UP – nil

This 29 year old gentleman took an overdose as above. He has a background of low mood and alcohol excess and was treated with Parbinex and Parvolex and made an uneventful recovery.

He was reviewed by psychiatry liaison and by the addiction liaison team who advised him regarding his alcohol intake but felt he was low risk for alcohol withdrawal or suicide and he was allowed home.

Yours sincerely,
Dr Dan Lassman
Consultant

Discharged: 15/09/12
Inpatient
Diagnosis: abdominal pain
Follow up: nil

This gentleman was admitted with right flank pain. His bloods were normal as was his urinalysis. His abdomen was soft and non-tender. His CT/KUB showed no evidence of any renal tract calculi but an incidental finding of bilateral duplex kidneys. It also mentioned that he had quite a lot of faecal loading but otherwise was fine. His pain settled and he was discharged home. He requires no urology follow-up.

Kind regards

Yours sincerely

Sarah Reid

CT Urinary tract

Performed	15-Sep-2012 11:59	Received	15-Sep-2012 14:13
Reported	15-Sep-2012 13:51	Order Number	G405H27258098
Status	Final	Source System	MiSys

CT Urinary tract Final
Sean Maguire
Clinical History :
Severe right flank pain with trace of blood in urine. Strong family history of renal stones. Colicky pain for 2-3 days. Renal stones?

CT Urinary tract :
Unenhanced volume acquisition through the abdomen and pelvis.

Both kidneys are of duplex morphology but are uncomplicated. No calculi seen in the kidneys, ureters or bladder. Several tiny calcific foci in the pelvis lie outwith the ureters. No abnormality of the remaining visualised unenhanced solid organs. There is faecal loading of the whole colon. No abdominal or pelvic adenopathy. No free fluid.

Extreme lung bases are clear. No bony abnormality.

Conclusion: No evidence of renal tract calculi. Incidental uncomplicated bilateral duplex kidneys. Only potentially relevant positive finding is faecal loading throughout the colon.Appendix is outlined and normal.

CLINICAL INFORMATION

History of presenting complaint / examination findings / investigation results

Presenting complaint

Description: Lump in scrotum

Date of onset: 15-Aug-2007

Comment: Dear Doctor,

This 23 year-old man is new to my medical practice and I do not have his previous medical records. He presents with a lump in the right side of his scrotum which he says has been present for three months. He tells me this was investigated at the Western Infirmary and he was reassured but he was increasingly concerned because the lump did not appear to be disappearing. Certainly there was a palpable lump in the scrotum which appeared to be a thickened right epididymus and possible epididymal cyst but I would be grateful for your reassurance that no serious pathology is being overlooked.

As yet I have no details of his past medical history but currently he is taking no current drug therapy.

Thank you for seeing him.

Yours sincerely,

Dr. Ian Struthers

Dear Dr Graham

SEAN MAGUIRE DOB 1.12.83
97 GLEDDOCH ROAD, GLASGOW (UNIT NUMBER: 756471)

Diagnosis: Undisplaced fracture waist right scaphoid

This 16 year old boy was playing football on 21 November 1999 when he fell saving a ball as the goalkeeper. He sustained an hyperextension injury to his right wrist and attended Accident & Emergency Department the next day. On examination he is extremely tender over the scaphoid and all movements of the wrist are painful. On x-ray the clinical suspicion is confirmed by an undisplaced fracture at the waist of the scaphoid. I have placed him a scaphoid cast and will review him in 6 weeks time with cast off on arrival.

Yours sincerely

Dear Dr Barnes

RE: SEAN MAGUIRE 97 GLEDDOCH ROAD GLASGOW
DOB: 01 12 83 UNIT NO: 756471

I reviewed this young boy at the Hand Clinic today. I understand that he injured his left little finger while playing football about eight days ago. His hand was hit by the ball and he thinks it was probably a hyperextension injury that he sustained. He was apparently seen in the A&E Dept at the time and an x-ray was carried out. He was reassured that there was no evidence of any fracture and he was simply treated with buddy strapping. He re-attended the A&E Dept yesterday complaining that the finger was still sore and he was therefore referred to the Hand Clinic.

On review of the hand today he certainly has a little bit of swelling around the PIP joint. He has full extension of the joint. He is tender around all aspects of the joint but most markedly on the medial aspect and over the dorsal area. There is no evidence of any instability. Review of his x-rays did not show any bony injury.

I think he has a simple soft tissue injury. He should be treated with buddy strapping for perhaps another 10 to 14 days. I have advised him on simple exercises for mobility. I would expect his symptoms to gradually settle and I have not made a routine review appointment but he does have an open appointment to attend should he have ongoing problems.

Kind regards.

Yours sincerely

Dear Dr. Barnes

RE: SEAN MAGUIRE, 97 GLEDDOCH ROAD, GLASGOW
DOB: 1/12/83 UNIT NO: 756471

Sean was reviewed a week after having his right arm rolled over by a heavy tyre. He seems to have an ulnar nerve neuropraxia. He has 3/5 power on abduction of the small finger but adduction of the thumb appears normal. He has difficulty flexing any of the fingers of the hand although it doesn't appear weak. He has altered sensation over the volar and dorsal aspects of the small, ring and long fingers but the index and thumb have been spared. He has full passive extension of all the fingers of the left hand. I have asked the Physio to show him some passive and active mobilisation exercise and will review him again in 6 weeks time.

Yours sincerely

Mr C. Walker, FRCS,
Consultant Orthopaedic Surgeon.

This twenty three year old man was seen recently at the clinic. He had noticed some swelling associated with the right testes some three months ago. He has had no particular pain associated with this nor has it changed in size since he was first aware of it.

On examination there is some thickening of the epididymis. Both testes feel normal.

As a precaution I have arranged a scan to exclude any under lying pathology. I will be in contact again when the results of this is available.

Yours sincerely

Dear Dr

SEAN MAGUIRE DOB: 01/12/83 (SG00756471)
321 SHIELDHALL ROAD, FLAT 1/2, GLASGOW, G51 4HB

This patient attended the fracture clinic today. He sustained a hyperextension injury to his right middle finger playing football in goals.

On examination he has swelling and bruising around the PIP joint and is tender around the volar aspect. He is able to achieve approximately 60 degs. of flexion of the PIP joint and has function of both extensor and flexor tendons.

X rays reveal a volar plate evulsion fracture affecting the base of the middle phalanx.

No intervention is required. Neighbour strapping has been applied and he has been encouraged to mobilise as symptoms allow. General advice has been given as regards to this injury.

Yours sincerely

Michael Mullen
Orthopaedic Registrar

DATE	CLINICAL NOTES
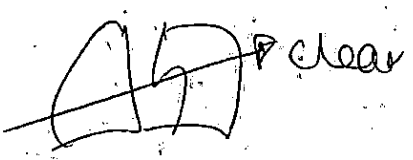
	SEEN BY (DR) PAULA FALCONER. TIME SEEN

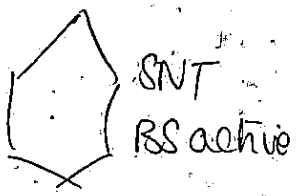
23.7.11 (27) PC. Facial injury.

HPC No history from patient - not speaking.
Eventually admits to having two beers. Denies other drugs.
No idea what happened to him, where he is - remembers for a few seconds then asking 'where am I.'
Ambulance report - found on street - seen falling onto face.

O/E Smells very strongly of alcohol +++ slurring
Not responding initially to voice - responded well to Trapezius squeeze
Obeying commands.
GCS 14/15 - now confused → does not know where he is and forgets shortly after being told.
PEARL Tone, power, reflexes normal. Plantars dl.
Patient not co-operative ∴ Cranial nerve exam

HS 1+11+0
CRT < 2 sec
Calves SNT





T 35.8 P 118 BP 133/69 RR 16 Sats 99% (air)
BM 5.8

Passed urine in A+E, negative.

→

DATE	CLINICAL NOTES

Large full thickness laceration above nose
V shaped

Lignocaine instilled.
Uneventful. 5 sutures put in + steristrips.

Girlfriend came into department - patient does not recognise his girlfriend.

Impression: Head injury, laceration, likely concussion under influence of alcohol +/- other substances.

Plan
IV access
IV fluids
Routine bloods
Neuro observations
Ortho bed overnight for neuro obs.

23/7/11 WR MR WALKER
9:30

- Fall onto face: facial swelling bruising & laceration
New obs stable overnight
- R/V by MR Walker happy to be discharged (F42) home if stable in late afternoon.

STANDARDISED EARLY WARNING SCORING SYSTEM (SEWS)

Patient Observation Chart

Name	AFFIX PATIENT ID
Address	
Hospital No.	
DOB	

	Date	Ward	Consultant
Admitted			
Transferred			
Transferred			
Transferred			

This is Chart Number_____during this admission

All seven parameters must be assessed with each set of observations to obtain an accurate SEWS score. If a patient has abnormal vital signs please pay particular attention to scoring for urine output.

How to calculate SEWS Score

- Note whether observation falls in shaded "At Risk Zone". Score as per SEWS Key.
- Add points scored and record total "Sews Score" in bottom row of chart.
- Respiratory rate — Write numerical value in appropriate box
- Saturation Sp02 — Write numerical value in appropriate box
- Inspired Oxygen — If the patient's saturation is recorded on air please write A in appropriate box. If patient is on oxygen therapy, please document the amount in appropriate box.
- Temperature — Write numerical value in appropriate box
- Blood pressure — Write numerical values for systolic and diastolic pressure in appropriate box. Remember only the systolic value is considered for the SEWS Score.
- Heart rate — Write numerical value in appropriate box
- Neuro Response — Record patient's best response. If the patient is asleep or demonstrates new confusion, award the same score as verbal response.
- Urine Output — Check that patient has voided urine recently. If yes write PU in box provided. If no write NPU in box provided.
- Urine Output — Check if the patient has passed the equivalent of or more than 30mls/hour for the last three consecutive hours. If yes score 0 in box provided. If no score 3 in box provided and add to total SEWS score.
- SEWS Score — Add up scores for all 7 parameters and write in box provided. If the patient merits an aggregate score of 0 please write 0 in the SEWS score box. Action as per guidelines below.

SEWS KEY

0	1	2	3

SEWS 0-1: Routine observations
SEWS 2-3: Hourly observations and inform nurse in charge
SEWS 4+: Contact PRHO immediately. SHO or more senior doctor must be informed by Junior Doctor. Please record action taken in Nursing Notes

FURTHER SEWS SCORE SHOULD BE CHECKED

- In the event of a sudden worrying ***Change***
- If there is a worsening ***Trend***
- If concerned the patient looks ***Unwell***

The frequency of SEWS scoring is determined by the previous SEWS Score. If the patient continually scores 0-1, the nurse caring for the patient should determine frequency of observations.

A full set of observations and SEWS score should still be carried out.

If SEWS continually 0-1 frequency of observations:

Date												
Frequency												

For extra information such as wound, CSM etc. use slanted columns at bottom of page.

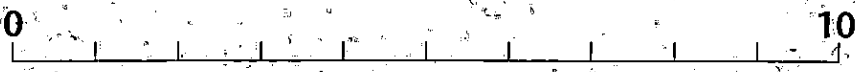
Pain Assessment & Management Guidelines

How to score pain:



No Pain — Worst Pain Imagineable

Pain Score:		Action:
0	NONE	Continue to assess pain with every set of observations (**must be** at least daily).
1-3	MILD	Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review.
4-6	MODERATE	Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review.
7-10	SEVERE	Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review.

Guidelines

Cancer-related pain:

Always score the worst pain in the last 24hours or since last assessment.

FOR PERSISTANT MODERATE PAIN (4 OR ABOVE) WHICH DISTRESSES THE PATIENT:

Use Cancer Pain Management Algorithm in Palliative Care Resource File. This is distributed to all wards and is also accessible on the intranet. If no improvement in pain score contact Hospital palliative care team on **page 1266** at SGH and **page 5742** at VI.

Out of hours advice can be obtained from the Prince and Princess of Wales Hospice on **0141 420 6785.**

Acute pain:

Score current pain on movement e.g. deep breathing

PERSISTENT SEVERE PAIN (7 OR ABOVE), WHICH DISTRESSES THE PATIENT:

Use Acute Pain Manual - distributed to all Operating Theatres areas and Surgical wards throughout Division. Also accessible on Intranet (via anaesthetic department homepage)

If no improvement in pain score contact CNS Pain Management on **page 1186/1157** at SGH and **page 3404/3101** at VI. On Call anaesthetist **page 1658** at SGH and **3004** at VI.

Measuring Sedation

The SEWS system uses the AVPU scoring system for conscious level. AVPU is an acronym for Alert, Verbal Pain, Unresponsive. The AVPU system relates to the previous sedation scale as follows:

Sedation	Descriptor	AVPU
0	Awake	A
1	Asleep, roused by speech	V
2	Physical stimulation (eg shaking) required to waken	P
3	Not roused by speech or shaking	U

Measuring Nausea

Is now recorded as 0 for no nausea or vomiting, N for nausea and V for vomiting
For persistent nausea and/or vomiting see clinical handbook or acute pain manual.

NB: Review Treatment Plan

If Temp>38
blood cultures ☐ other cultures ☐ Start antibiotic therapy if indicated

If Systolic BP<100
Review monitoring (cardiac/oximetry/urine output/invasive BP etc)
IV Access
Review patient/drug kardex. Consider fluid challenge → Definitive Therapy

Consider:

Hypovolaemia	Cardiac	Obstructive	Distributive
Dehydration	*Arryhthmia*	*PE*	*Sepsis*
Blood loss	*Pump failure*	*Tamponade*	*Anaphylaxis*

If Pulse>130
Review monitoring
IV Access
Review patient/ECG/electrolytes → Definitive Therapy

If O_2 sats <93%
Review probe ? accurate
Review patient → prescribe oxygen on kardex if indicated.

If RR>24
Review patient/CXR +/- gases/PEF etc → Definitive Therapy

If responds to pain only or unresponsive
Assess airway, BM GCS, consider neuro obs chart, review patient/kardex.

If BM<4
Check urgent blood glucose/IV dextrose or oral carbohydrate

US TESTES/SCROTUM

Reported by: Dr B MUCCI (Cons). Verified

Clinical History : Thickened right scrotum.

US TESTES/SCROTUM :

Ultrasound shows normal testes. The epididymis on the right is a little prominent but no discrete cysts or masses are seen. The appearances are essentially normal. They are certainly entirely benign with no significant mass or cysts.

Exam: 05/09/2007 MR L MORRISON (UROLO (UROLOGY)

Name Joan McGuire

Record no.

Date 28/4/8 — 19/9/8 — 30/09

Time 1115 1125 1135 1145 1208 1300 1400 0900 0906 1040

Coma Scale

		1115	1125	1135	1145	1208	1300	1400	0900	0906	1040
Eyes open	Spontaneously	0	1	0	0	0	0	0		1	0
	To speech										
	To pain										
	None										
Best motor response	Obeys commands	1	0	0	0	0	0	0		0	0
	Localise pain										
	Normal flexion to pain										
	Abnormal flexion to pain										
	Extension to pain										
	None										
Verbal response	Orientated		0	0	0	0				0	0
	Confused	0					0	0			
	Inappropriate words										
	Incomprehensible sounds										
	None										

Eyes closed by swelling = C

Usually record the best arm response.

Endotracheal tube or tracheostomy = T

Pupil Scale (mm)

		Mild weakness				0	0	0			0	
		Severe weakness										
		Spastic flexion										
		Extension										
		No response										

Record right (R) and left (L) separately if there is a difference between the two sides.

Basic Guide for Performing Neurological Observations

1. Frequency of performing observations: **This is the minimum recommended.**

   More frequent observations should be carried out if the clinical condition requires it.

- On arrival i.e. following transfer from another area. Should be compared to previous recording and any deterioration discussed with medical staff.
- At half hourly intervals for 2 hours.
- At hourly intervals for 4 hours.
- At 2 hourly intervals for 6 hours.
- At 4 hourly intervals until fit for discharge.

2. Examples of neurological deterioration that should be reported immediately to medical staff:

- Development of agitation or abnormal behaviour. (Do not automatically attribute to effects of alcohol or drug abuse.)
- Sustained decrease in conscious level of at least one point in the motor or verbal response, or two points in the eye opening response.
- Development of severe or increasing headache.
- Persisting vomiting.
- New or evolving neurological signs i.e. pupil inequality, asymmetry of limb or facial movement.

Eyes Open

- Conscious patients sense your approach and open their eyes spontaneously.
- Verbal stimulus may be normal, repeated or loud, recognisably use their name (beware not to touch at this time- use only verbal).
- Painful stimulus is applied by trapezius squeeze (use thumb and two fingers to hold and squeeze 2 inches of trapezius muscle where the head/neck meets the shoulder). If eyes do not open in response, squeeze the side of the patient's finger (3rd or 4th) between your thumb and a pen.

Best Motor Response

- **Obey commands.** The patient understands and carries out instructions e.g. lift up arms; hold up thumb, squeeze hands - always ask patient to release grip in order to eliminate primitive reflex. Be aware of possible hearing/speech disorders.
- **Localise pain.** The patient must bring hand up beyond level of the clavicle in response to central painful stimulus (trapezius, finger squeeze).

  Patients may localise to irritants such as O_2 masks or N/G tubes. Best arm response is used as leg response may be a spinal reflex only.
- **Flexion to pain.** The patient may flex or bend their arm towards source of pain but do not actually localise or try to remove the source. Response is variable with each stimulus.
- **Abnormal flexion.** The patient may flex or bend the arm at elbow and rotate wrist (spastic posture) whilst drawing arm across chest. Response is slower than in normal flexion to pain.
- **Extension to pain.** The patient may extend or straighten arm at elbow or may rotate arm towards.
- **No response to pain.** Beware absence of response may be due to high spinal injury or muscle paralysing drugs.

Best Verbal Response

- **Orientation.** The patient knows who they are, where they are, month and year and why they are where they are.
- **Confusion.** The patient holds a conversation but cannot answer accurately, talks in sentences, unaware of self or environment.
- **Inappropriate words.** The patient replies in words said at random, often shouts or swears.
- **Incomprehensible sounds.** You may have to use both verbal and painful stimulus to get a response. Patient may moan or groan (beware of English language ability).
- **No response.** Beware of possible hearing/speech disorders.

Pupils

- **Size.** Look at pupil before shining light into the eye. Both should be equal in size (beware drugs affecting size). Beware pre-existing irregularities e.g. cataracts, blindness etc. Shape is normally round.
- **Reaction.** Should be 'consensual' reaction i.e. where both eyes constrict as light shone into one (bring light in from side of eye).

Vital Signs

- **Temperature.** Alterations may be due to damage to hypothalamus. Raised temperature also increases demand for O_2 by brain cells so regulation is important.
- **Blood pressure and pulse.** Haemorrhage from an extra-cranial site may lead to falling blood pressure and rising pulse and if under treated, shock may cause neurological deterioration. Rising blood pressure and slowing of pulse can be a sign of increasing intra-cranial pressure.
- **Respirations.** Reduced conciousness may cause hypoxia through inadequate respiration or an obstructed airway. Hypoxia may cause neurological deterioration. Changes in rate and pattern may indicate a rise in intra-cranial pressure.

Limb movement

- **Normal power.** The patient matches resistance applied to any joint movement (pulls you towards them or pushes you away).
- **Mild weakness.** The patient moves against resistance but is easily overcome.
- **Severe weakness.** The patient able to move limb but not against resistance.
- **Spastic flexion.** The patient may flex or bend the arm at elbow and rotate wrist (spastic posture) whilst drawing arm across chest. Response is slower than in normal flexion to pain.
- **Spastic extension.** The patient may extend or straighten arm at elbow or may rotate arm towards.
- **No response.** Beware absence of response may be due to high spinal injury or muscle paralysing drugs.

Basic Guide for Performing Neurological Observations

1. Frequency of performing observations: **This is the <u>minimum</u> recommended.**

   More frequent observations should be carried out if the clinical condition requires it.

- On arrival i.e. following transfer from another area. Should be compared to previous recording and any deterioration discussed with medical staff.
- At half hourly intervals for 2 hours.
- At hourly intervals for 4 hours.
- At 2 hourly intervals for 6 hours.
- At 4 hourly intervals until fit for discharge.

2. Examples of neurological deterioration that should be reported immediately to medical staff:

- Development of agitation or abnormal behaviour. (Do not automatically attribute to effects of alcohol or drug abuse.).
- Sustained decrease in conscious level of at least one point in the motor or verbal response, or two points in the eye opening response.
- Development of severe or increasing headache.
- Persisting vomiting.
- New or evolving neurological signs i.e. pupil inequality, asymmetry of limb or facial movement.

Eyes Open

- Conscious patients sense your approach and open their eyes spontaneously.
- Verbal stimulus may be normal, repeated or loud, recognisably use their name (beware not to touch at this time- use only verbal).
- Painful stimulus is applied by trapezius squeeze (use thumb and two fingers to hold and squeeze 2 inches of trapezius muscle where the head/neck meets the shoulder). If eyes do not open in response, squeeze the side of the patient's finger (3rd or 4th) between your thumb and a pen.

st Motor Response

- **Obey commands.** The patient understands and carries out instructions e.g. lift up arms, hold up thumb, squeeze hands - always ask patient to release grip in order to eliminate primitive reflex. Be aware of possible hearing/speech disorders.
- **Localise pain.** The patient must bring hand up beyond level of the clavicle in response to central painful stimulus (trapezius, finger squeeze).

  Patients may localise to irritants such as O_2 masks or N/G tubes. Best arm response is used as leg response may be a spinal reflex only.
- **Flexion to pain.** The patient may flex or bend their arm towards source of pain but do not actually localise or try to remove the source. Response is variable with each stimulus.
- **Abnormal flexion.** The patient may flex or bend the arm at elbow and rotate wrist (spastic posture) whilst drawing arm across chest. Response is slower than in normal flexion to pain.
- **Extension to pain.** The patient may extend or straighten arm at elbow or may rotate arm towards.
- **No response to pain.** Beware absence of response may be due to high spinal injury or muscle paralysing drugs.

Best Verbal Response

- **Orientation.** The patient knows who they are, where they are, month and year and why they are where they are.
- **Confusion.** The patient holds a conversation but cannot answer accurately, talks in sentences, unaware of self or environment.
- **Inappropriate words.** The patient replies in words said at random, often shouts or swears.
- **Incomprehensible sounds.** You may have to use both verbal and painful stimulus to get a response. Patient may moan or groan (beware of English language ability).
- **No response.** Beware of possible hearing/speech disorders.

Pupils

- **Size.** Look at pupil before shining light into the eye. Both should be equal in size (beware drugs affecting size). Beware pre-existing irregularities e.g. cataracts, blindness etc. Shape is normally round.
- **Reaction.** Should be 'consensual' reaction i.e. where both eyes constrict as light shone into one (bring light in from side of eye).

Vital Signs

- **Temperature.** Alterations may be due to damage to hypothalamus. Raised temperature also increases demand for O_2 by brain cells so regulation is important.
- **Blood pressure and pulse.** Haemorrhage from an extra-cranial site may lead to falling blood pressure and rising pulse and if under treated, shock may cause neurological deterioration. Rising blood pressure and slowing of pulse can be a sign of increasing intra-cranial pressure.
- **Respirations.** Reduced conciousness may cause hypoxia through inadequate respiration or an obstructed airway. Hypoxia may cause neurological deterioration. Changes in rate and pattern may indicate a rise in intra-cranial pressure.

Limb movement

- **Normal power.** The patient matches resistance applied to any joint movement (pulls you towards them or pushes you away).
- **Mild weakness.** The patient moves against resistance but is easily overcome.
- **Severe weakness.** The patient able to move limb but not against resistance.
- **Spastic flexion.** The patient may flex or bend the arm at elbow and rotate wrist (spastic posture) whilst drawing arm across chest. Response is slower than in normal flexion to pain.
- **Spastic extension.** The patient may extend or straighten arm at elbow or may rotate arm towards.
- **No response.** Beware absence of response may be due to high spinal injury or muscle paralysing drugs.

STANDARDISED EARLY WARNING SCORING SYSTEM (SEWS)

Patient Observation Chart

Name Sean Maguire AFIX PATIENT ID

Address

Hospital No.

DOB 01/12/83

	Date	Ward	Consultant
Admitted			
Transferred			
Transferred			
Transferred			

This is Chart Number_____during this admission

All seven parameters must be assessed with each set of observations to obtain an accurate SEWS score. If a patient has abnormal vital signs please pay particular attention to scoring for urine output.

How to calculate SEWS Score

- Note whether observation falls in shaded "At Risk Zone". Score as per SEWS Key.
- Add points scored and record total "Sews Score" in bottom row of chart.
- Respiratory rate — Write numerical value in appropriate box
- Saturation Sp02 — Write numerical value in appropriate box
- Inspired Oxygen — If the patient's saturation is recorded on air please write A in appropriate box. If patient is on oxygen therapy, please document the amount in appropriate box.
- Temperature — Write numerical value in appropriate box
- Blood pressure — Write numerical values for systolic and diastolic pressure in appropriate box. Remember only the systolic value is considered for the SEWS Score.
- Heart rate — Write numerical value in appropriate box
- Neuro Response — Record patient's best response. If the patient is asleep or demonstrates new confusion, award the same score as verbal response.
- Urine Output — Check that patient has voided urine recently. If yes write PU in box provided. If no write NPU in box provided.
- Urine Output — Check if the patient has passed the equivalent of or more than 30mls/hour for the last three consecutive hours. If yes score 0 in box provided. If no score 3 in box provided and add to total SEWS score.
- SEWS Score — Add up scores for all 7 parameters and write in box provided. If the patient merits an aggregate score of 0 please write 0 in the SEWS score box. Action as per guidelines below.

SEWS KEY

0	1	2	3

SEWS 0-1: Routine observations
SEWS 2-3: Hourly observations and inform nurse in charge
SEWS 4+: Contact PRHO immediately. SHO or more senior doctor must be informed by Junior Doctor. Please record action taken in Nursing Notes

FURTHER SEWS SCORE SHOULD BE CHECKED

- In the event of a sudden worrying ***Change***
- If there is a worsening ***Trend***
- If concerned the patient looks ***Unwell***

The frequency of SEWS scoring is determined by the previous SEWS Score. If the patient continually scores 0-1, the nurse caring for the patient should determine frequency of observations.

A full set of observations and SEWS score should still be carried out.

If SEWS continually 0-1 frequency of observations:

Date												
Frequency												

For extra information such as wound, CSM etc. use slanted columns at bottom of page.

Pain Assessment & Management Guidelines

How to score pain: 0 — 10

No Pain — Worst Pain Imagineable

Pain Score:		Action:
0	NONE	Continue to assess pain with every set of observations (**must be** at least daily).
1-3	MILD	Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review.
4-6	MODERATE	Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review.
7-10	SEVERE	Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review.

Guidelines

Cancer-related pain:

Always score the worst pain in the last 24hours or since last assessment.

FOR PERSISTANT MODERATE PAIN (4 OR ABOVE) WHICH DISTRESSES THE PATIENT:

Use Cancer Pain Management Algorithm in Palliative Care Resource File. This is distributed to all wards and is also accessible on the intranet. If no improvement in pain score contact hospital palliative care team on **page 1266** at SGH and **page 5742** at VI.

Out of hours advice can be obtained from the Prince and Princess of Wales Hospice on **0141 420 6785.**

Acute pain:

Score current pain on movement e.g. deep breathing

PERSISTENT SEVERE PAIN (7 OR ABOVE), WHICH DISTRESSES THE PATIENT:

Use Acute Pain Manual - distributed to all Operating Theatres areas and Surgical wards throughout Division. Also accessible on Intranet (via anaesthetic department homepage)

If no improvement in pain score contact CNS Pain Management on **page 1186/1157** at SGH and **page 3404/3101** at VI. On Call anaesthetist **page 1658** at SGH and **3004** at VI.

Measuring Sedation

The SEWS system uses the AVPU scoring system for conscious level. AVPU is an acronym for Alert, Verbal Pain, Unresponsive. The AVPU system relates to the previous sedation scale as follows:

Sedation	Descriptor	AVPU
0	Awake	A
1	Asleep, roused by speech	V
2	Physical stimulation (eg shaking) required to waken	P
3	Not roused by speech or shaking	U

Measuring Nausea

Is now recorded as 0 for no nausea or vomiting, N for nausea and V for vomiting

For persistent nausea and/or vomiting see clinical handbook or acute pain manual.

NB: Review Treatment Plan

If Temp>38 — blood cultures ☐ other cultures ☐ Start antibiotic therapy if indicated

If Systolic BP<100 — Review monitoring (cardiac/oximetry/urine output/invasive BP etc)
IV Access
Review patient/drug kardex. Consider fluid challenge ⟶ Definitive Therapy

Consider:

Hypovolaemia	Cardiac	Obstructive	Distributive
Dehydration	*Arryhthmia*	*PE*	*Sepsis*
Blood loss	*Pump failure*	*Tamponade*	*Anaphylaxis*

If Pulse>130 — Review monitoring
IV Access
Review patient/ECG/electrolytes ⟶ Definitive Therapy

If O_2 sats <93% — Review probe ? accurate
Review patient ⟶ prescribe oxygen on kardex if indicated.

If RR>24 — Review patient/CXR +/- gases/PEF etc ⟶ Definitive Therapy

If responds to pain only or unresponsive — Assess airway, BM GCS, consider neuro obs chart, review patient/kardex.

If BM<4 — Check urgent blood glucose/IV dextrose or oral carbohydrate

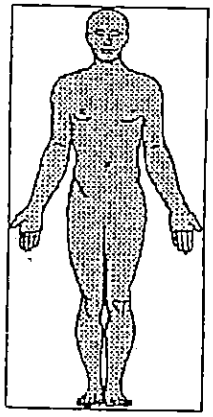
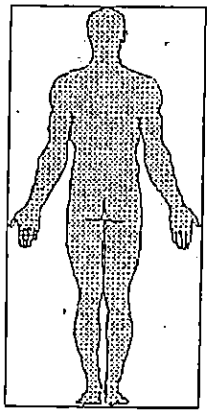
DETAILS OF PRESSURE SORES PRESENT ON ADMISSION

Site of sore.

Front



Back



Grade of sore.

1 Blanching hyperaemia.

2 Non-blanching hyperaemia.

3 Ulcer progresses through to subcutaneous tissue.

4 Lesion extends into subcutaneous fat.

5 Infective necrosis/necrotic tissue.

(Torrance 1983)

On admission, number site of sore on the above diagram and enter grade on table below. Commence on wound assessment chart where appropriate, i.e. stage 3 and above and stage 2 if there is a break in the skin.

Nurse/Midwife Administration by Proto(- Authorised Nurses/Midwives (

(Maximum number of doses as per protocol)

Warning: Check the As Required and Regular Prescription sections to ensure that the drug has not already been prescribed by a doctor.

DOCTOR'S DECLARATION (if required by Local Protocol)

I authorise nurse/midwife administration of the medicines included in the nurse/midwife administration protocol No.(s) ..... with the following exceptions: _____

Signature: _____ Date: _____

DATE	DRUG	DOSE	ROUTE	TIME	SIGNATURE OF NURSE	GIVEN BY	TIME GIVEN

Notes for Users

FOR DOCTORS:

1. Sign your name clearly against each prescription.
2. When drugs are discontinued, draw a diagonal line through the prescription box, initial and date appropriate boxes.
3. If an existing prescription is to be modified, delete existing prescription as described and re-write new instructions in a new section.
4. Use approved names in BLOCK LETTERS and use metric doses as follows:

   Milligram = **mg** Gram = **g**

   Millilitre = **ml** Microgram: **to be written in full.**

   Fractions of a milligram should be written in micro grams. A zero should be written in front of a decimal point where there is no other figure, e.g. 0.5ml **not** .5ml.
5. Method of administration should be abbreviated as follows:

Intravenous	= **IV**	Oral	= **O**
Subcutaneous	= **SC**	Per rectum	= **PR**
Inhalations	= **INH**	Topical	= **TOP**
Sublingual	= **SL**	Nasogastric	= **NG**
Intramuscular	= **IM**	Vaginal	= **PV**
Intradermal	= **ID**		

FOR NURSES:

1. The 'Regular' and 'as required' medicines sections should be checked at each administration round to ensure that inadvertent omission or double dosing is avoided.
2. Ensure entry is made on administration record each time drug is given. Initial in relevant date column and time row.
3. Check that all drugs prescribed at a certain time are administered.
4. If drug is not administered, enter reason in appropriate box using the undernoted coding system.

Codes for Non-Administration of Drugs

(3) Patient refused	(7) Patient asleep	(11) Unable to swallow	(14) Other - Record in nursing notes
(4) Drug not available	(8) Time varied on doctor's instructions	(12) No intravenous access	(15) Prescription clarification required
(5) Nil by mouth/fasting	(9) Dose withheld on doctor's instructions	(13) Patient Self-Administration of Medicine	
(6) Patient unavailable	(10) Nausea/vomiting

TOTAL SCORE:	8														

Score as follows: <10 = Low risk; 10-14 = At risk; 15-19 = High risk; 20+ = Very high risk.

Refer to Pressure Ulcer Prevention Guidelines (GGHB) for action.

Action Plan

Date	Preventative action to be taken (e.g. turning time; position; support surface/cushion; other)	Signature

Further action

	Date	Signature
Referred to dietitian		
Referred to TVNS		
'Wound and Pressure Area Care Assessment Chart' commenced		

GRADE OF ULCER (Torrance)

GRADE	*DEFINITION*
1.	Blanching hyperaemia.
2.	Non-blanching hyperaemia.
3.	Ulceration progresses through to dermis.
4.	Lesion extends through to subcutaneous fat.
5.	Infective necrosis / necrotic tissue.

RECORDING THE GRADE OF ULCER

On admission, **number site of ulcer** on the diagram opposite and **enter the ulcer number and the grade** in the action plan.

Assessment should be carried out on all patients within 2 - 4 hours of admission and repeated 24 - 48 hours afterwards. Repeat assessment as condition changes or at weekly intervals.

Note: To discontinue a prescription, initial and date appropriate boxes and draw a diagonal line through section

Nurse/Midwife Administration by Proto - Authorised Nurses/Midwives Only

(Maximum number of d es as per protocol)

Warning: Check the As Required and Regular Prescription sections to ensure that the drug has not already been prescribed by a doctor.

DOCTOR'S DECLARATION (if required by Local Protocol)

I authorise nurse/midwife administration of the medicines included in the nurse/midwife administration protocol No.(s) ..... with the following exceptions: _____

Signature: _____ Date: _____

DATE	DRUG	DOSE	ROUTE	TIME	SIGNATURE OF NURSE	GIVEN BY	TIME GIVEN

Notes for Users

FOR DOCTORS:

1. Sign your name clearly against each prescription.
2. When drugs are discontinued, draw a diagonal line through the prescription box, initial and date appropriate boxes.
3. If an existing prescription is to be modified, delete existing prescription as described and re-write new instructions in a new section.
4. Use approved names in BLOCK LETTERS and use metric doses as follows:

Milligram =	**mg**	Gram =	**g**
Millilitre =	**ml**	Microgram:	**to be written in full.**
		Units:	**to be written in full.**

Fractions of a milligram should be written in micro grams. A zero should be written in front of a decimal point where there is no other figure, e.g. 0.5ml **not** .5ml.

5. Method of administration should be abbreviated as follows:

Intravenous =	**IV**	Oral =	**O**
Subcutaneous =	**SC**	Per rectum =	**PR**
Inhalations =	**INH**	Topical =	**TOP**
Sublingual =	**SL**	Nasogastric =	**NG**
Intramuscular =	**IM**	Vaginal =	**PV**
Intradermal =	**ID**		

FOR NURSES:

1. The 'Regular' and 'as required' medicines sections should be checked at each administration round to ensure that inadvertent omission or double dosing is avoided.
2. Ensure entry is made on administration record each time drug is given. Initial in relevant date column and time row.
3. Check that all drugs prescribed at a certain time are administered.
4. If drug is not administered, enter reason in appropriate box using the undernoted coding system.

Codes for Non-Administration of Drugs

(3) Patient refused	(7) Patient asleep	(11) Unable to swallow	(14) Other - Record in nursing notes
(4) Drug not available	(8) Time varied on doctor's instructions	(12) No intravenous access	(15) Prescription clarification required
(5) Nil by mouth/fasting	(9) Dose withheld on doctor's instructions	(13) Patient Self-Administration of Medicine	
(6) Patient unavailable	(10) Nausea/vomiting

The 'Regular' and 'as required' medicines sections should be checked at each administration round to ensure that inadvertent omission or double dosing is avoided.

Name JEAN MAGUIRE

CHI No 0112836097

Drug Allergies / Sensitivities None Known ☑ Yes ☐ (provide details below)

Nurse/Midwife Administration by Symptomatic Relief Policy or other Protocol - Authorised Nurses/Midwives Only (Maximum number of doses as per protocol)

Warning: Check the As Required and Regular Prescription sections to ensure that the drug has not already been prescribed by a doctor.

DATE	DRUG	DOSE	ROUTE	TIME (24hr)	NURSE (PRINT & SIGN)	GIVEN BY	TIME GIVEN (24hr)

Notes for Users

FOR PRESCRIBERS:

1. Prescribe drugs generically using the Approved Name (except in circumstances where bioavailability differences between brands of the same drug are so important as to warrant prescribing by brand name e.g. in the case of sustained release lithium or theophylline).
2. All prescription entries must be legible and made so as to be indelible (black ink is recommended).
3. Print & Sign your full name clearly against each prescription entry.
4. Time should be recorded in 24hr format e.g. 0600, 1800.
5. When drugs are discontinued, draw a diagonal line through the prescription box, initial and date the appropriate boxes and record reason.
6. If an existing prescription entry is to be modified, delete the existing prescription and re-write the new instructions as a new prescription entry.
7. The following metric unit abbreviations must be used –

Milligram = mg Gram = g
Millilitre = ml Millimoles = mmol
Microgram / Nanogram / Units – **Do not abbreviate, write in full**

Fractions of a milligram should be written in micrograms. The use of decimal points should be avoided, if possible. If decimal points must be used a zero must be written in front of the decimal point (e.g. 0.5ml **NOT** .5ml).

8. The route of administration can be abbreviated using the following -

O	= oral	ID	= intradermal
IM	= intramuscular	SL	= sublingual
SC	= subcutaneous	PR	= per rectum
NG	= nasogastric	PEG	= percutaneous endoscopic gastrostomy
PV	= per vagina	RIG	= radiologically inserted gastrostomy
NJ	= nasojejunostomy	PEJ	= percutaneous endoscopic jejunostomy
TOP	= topical	ETT	= endotracheal
NEB	= nebulised	INHAL	= inhaled
IV	= intravenous		

Please note - Intrathecal **must be written in full.**

FOR NURSES

1. The 'Once only', 'Regular' and 'As required' sections should be checked at each administration round to ensure that inadvertent omission or double dosing are avoided.
2. Insert initials in the relevant date column and time row each time a drug is administered.
3. Check that all drugs prescribed at a certain time have been administered.
4. If a drug is not administered enter the reason code in the appropriate date column and time row and also document the full reason in the patient's notes.

Codes for Non-Administration of Drugs

(3) Patient refused
(4) Drug not available
(5) Nil by mouth/fasting
(6) Patient unavailable
(7) Patient asleep
(8) Time varied on doctor's instructions
(9) Dose withheld on doctor's instructions
(10) Nausea/vomiting
(11) Unable to swallow
(12) No intravenous access
(13) Patient Self-Administration of Medicine
(14) Other - Record in nursing notes
(15) Prescription clarification required

Cat. No. 40995 Ver 4, 09/2010
