RHEUMATOLOGY QUESTIONNAIRE

Your help completing this questionnaire would be appreciated and should save you some time at your forthcoming Rheumatology appointment. This information is confidential. Please complete in the weeks prior to your clinic appointment. If you feel you cannot adequately complete any part, don't worry as it can be discussed with you at your appointment. Please give this sheet to the doctor at the clinic

Name SHONA HALLIDAY D.O.B. 6.11.1975

Address 16 THORNYBANK Tel No. .....

GROVE, DALKEITH G.P. Dr Robertson

EH22 2EG .....

.....

Occupation (if retired, previous occupation) Cook - House Wife

Past Medical/Suroical History

Please list below details of any previous operations or serious illnesses.

Previous Operation/Illness	Date	Where were you treated ?
Tonsils removed	APX 1995	ROYAL
C-Section	AUG 2011	ROYAL
.....	.....	.....
.....	.....	.....

Family History

Does anyone in your family have arthritis ? ~~Yes~~/No

If yes, please give details

Relationship to you	Type of Arthritis
.....	.....
.....	.....

Does anyone in your family have psoriasis ? ~~Yes~~/No

If yes, what is there relationship to you

.....

Current Medication	Dose
iron tablets	3 per day
anti depressants	75mg + 37.5mg daily

Are you allergic to any medication ? ~~Yes~~/No

Details .....

.....

Social History

Do you smoke ? Yes/~~No~~

If no, have you smoked in the past ? Yes/No

What is your average weekly alcohol intake ? 5 units

Thank you for completing this form. Please remember to bring it with you to your appointment.

Date : 8.10.12

NHS Lothian

HYDROXYCHLOROQUINE ADULT CHECKLIST

Patient Name: [illegible]

Patient D.O.B: [illegible]

Patient number: [illegible]

INVESTIGATIONS BEFORE STARTING HYDROXYCHLOROQUINE

1. BLOOD TEST : full blood count / renal & liver function / ESR
2. BASE LINE VISUAL ACUITY & AMSLER TEST
3. WEIGHT

INVESTIGATIONS WHILST TAKING HYDROXYCHLOROQUINE

EYE TEST: VISUAL ACUITY & AMSLER TEST. 6-12 MONTHLY.

- [x] Purpose of drug: Damps down inflammation, thus reduces pain, stiffness and swelling. May reduce the rash in Systemic Lupus Erythematosus. This drug is used in differing doses for the treatment of malaria, so caution needed for internet research.
- [x] Appearance: round enteric coated tablet. Dose: Advised by consultant or GP depending on weight. To be taken with or after food. Depending on response, dose may be reduced accordingly to achieve maintenance dose. Medics to advise. 400 mg daily
- [x] Response to the drug: Does not take effect immediately. Initially 8-12 weeks & up to 6 months to reach optimum effect. If beneficial, and no adverse side effects experienced, may be taken for any length of time.
- [x] Side effects: Uncommon. Occasionally, Skin rashes/ Indigestion / Headaches / Diarrhoea. May settle spontaneously, if not, seek advice from GP. Dose may be temporarily adjusted.
- [x] Research indicates potential risk that the retina may be affected. Blurred vision may occur initially. Beware of driving and using machinery. Seek medical advice if symptoms apparent.
- [x] Explain necessity for above investigations. Ensure all base line tests complete prior to administration of medication.
- [x] Continue other medication as directed by GP. Compatible with non-steroidal anti inflammatory drugs, if blood monitoring maintained.
- [x] Indigestion remedies may prevent the drug from being absorbed. Seek advice first from pharmacist or GP for 'over the counter' preparations
- [x] Immunisations - Compatible. Pneumococcal / flu / swine flu vaccines: recommended
- [x] Alcohol: in moderation.
- [x] Pregnancy: Prior to conceiving seek medical advice. DO NOT Breastfeed.
- [x] Alternative containers are available from your pharmacist if you have difficulty with screw tops.
- [x] Verbal and written information given to patient re: Hydroxychloroquine. And complete drug counselling form & give to patient.
- [x] Contact number of Nurse Specialist help line given to patient.

NHS Lothian

METHOTREXATE ADULT CHECKLIST

Patient Name Sheena Mowbray

Patient D.O.B 6/11/75

Patient number

INVESTIGATIONS BEFORE STARTING METHOTREXATE

1. BLOOD TEST : full blood count (Including differential white cell count), renal & liver function / ESR
2. CHEST XRAY : Result will be confirmed by consultant or registrar & sent to GP prior to prescribing.

INVESTIGATIONS NEEDED WHILST TAKING METHOTREXATE

1. BLOOD TESTS : As above. Fortnightly until stable for 6weeks, then monthly.

FOR YOUR NEXT FOLLOW UP APPOINTMENT, IF POSSIBLE PLEASE BRING A RECENT TEST RESULT FROM YOUR GP FOR THE FOLLOWING URINE TEST / BLOOD PRESSURE / BMI THANK YOU

- [x] Purpose of drug: Has an effect on the immune system, slowing the progression of the disease. Thus dampens down inflammation, reduces pain, stiffness and swelling. This drug is used in differing doses for the treatment of cancer, so caution needed for internet research.
- [x] Dose: to be prescribed by Consultant. To be taken ONCE WEEKLY with food. The dose may gradually increase until prescribed maintenance dose achieved. Issue and explain drug therapy chart.
- [x] A 10mg strength tablet is available and sometimes used for other conditions. Methotrexate should only be prescribed & dispensed as 2.5mg strength. As the two strengths are very similar in appearance, and may lead to drug errors. Please always check that your dose is correct before taking it each week.
- [x] Response to the drug: Does not take effect immediately. From 6-8 weeks to 6 months to reach optimum effect. May be taken for any length of time, if proves beneficial, and no adverse side effects experienced.
- [x] Folic Acid 5mgs will be prescribed to help counteract side effects. Taken, 24hrs after Methotrexate.
- [x] Side effects: Nausea, mouth ulcers, skin rash, diarrhoea, hair loss, possible. May settle spontaneously, if not, seek advice from GP. Dose may be temporarily adjusted. Rarely causes inflammation of the lungs, causing dry cough, breathlessness, or flu like symptoms. If occurs, **STOP** immediately and seek medical advice. There is an increased risk of developing lymphoma (blood cancer) when taking low dose methotrexate. The development of this condition is also associated with rheumatoid arthritis itself.
- [x] May affect the blood count, potential for problems with healing, and risk of infection. Monitor general health and seek advice accordingly from Gp.It is necessary to **STOP** taking methotrexate if antibiotics prescribed, infection identified, or surgery required. Inform medics & dentist prior to invasive treatments.
- [x] Explain necessity for above investigations. Ensure all base line tests complete.
- [x] Continue other medication as directed by GP. Compatible with non-steroidal anti inflammatory drugs, blood monitoring to be maintained. Seek advice from pharmacist for 'over the counter' preparations.
- [x] Report contact with chicken pox / shingles to GP. Antiviral treatment may be prescribed.
- [x] Pneumococcal / flu vaccines: RECOMMENDED. LIVE vaccines – INCOMPATABLE.
- [x] Alcohol – NO SPIRITS, 5-6 glasses of wine or 2-3 pints of lager per week, due to potential effect on liver.
- [x] AVOID Pregnancy; contraception needed for males & females during treatment and for at least 3months after treatment discontinued. DO NOT Breastfeed.
- [x] There are alternative containers available from your pharmacist if you have difficulty with screw tops.
- [x] Verbal and written information given to patient re: Methotrexate. Drug counselling check list completed, & issued to patient.
- [x] Contact number of Nurse Specialist help line given to patient.

DATE: 17/2/11

CHECKLIST FOR PATIENTS STARTING ON SULPHASALAZINE

Purpose of giving drug: damps down inflammation in arthritis. ☐

Appearance and dose:
Each tablet is 500mg. Largish tablet. Start with small dose to minimise side-effects - headache/nausea. Explain enteric-coating. ☐

Reduce dose and hold for 1 week if headache/nausea , then restart.
Aim for 4 tablet per day (2x2) once established unless told otherwise. ☐

May colour urine orange, normal and harmless. ☐

Continue other medication as directed by GP. ☐

Time scale for starting to feel benefit: may take 4-8 weeks. ☐

Side effects: Nausea and headaches are the commonest side-effects and can be overcome by adjustment of the dose. Occasionally skin rash, mouth ulcers, diarrhoea and dizziness. Rarely adverse effects on the lung or liver may occur. A reduction in the blood count can occur but uncommon. Ensure patient reads information sheet. Report any other possible side-effects to GP. ☐

Any other side effects on blood or liver picked up on routine blood sample taken by GP, monthly for the first three months then once every three months. GP will check and record blood results. ☐

Drug interaction: Double check for asprin or sulphonamide allergy/sensitivity. Do not take over-the-counter preparations, discuss this first with your GP, nurse or pharmacist. ☐

In men the sperm count may fall temporarily during treatment. If you are planning a family or become pregnant while receiving Sulphasalazine, you should discuss this with your GP or Rheumatologist as soon as possible. ☐

Alcohol can be taken in moderation when receiving Sulphasalazine. ☐

GP gives prescription to patient who gets tablets from chemist. If difficulty with screw-tops ask chemist for non-childproof container. ☐

Give information sheet and blood sheet to patient and explain what they are. Blood results recorded on sheet by GP. Patient to retain card and bring it with them when they come back to the clinic. ☐

How long can you be on Sulphasalazine? As long as helping and no adverse side effects. ☐

Verbal and written information given to patient commencing on Sulphasalazine. ☐

Contact number of nurse specialist given to patient. ☐

PRESCRIPTION AND ADMINISTRATION RECORD

Standard Chart

NHS Lothian

Hospital/Ward:	Consultant: Dr McKay
Weight:	Height:
If re-written, date:	
DISCHARGE PRESCRIPTION	
Date completed:	Completed by:
Name of Patient: Sloan Halliday	6001011561
CHI Number:	
D.O.B.	061175
(Attach printed label here)	

OTHER MEDICINE CHARTS IN USE		PREVIOUS ADVERSE REACTIONS This section must be completed before any medicine is given		Completed by (sign & print)	Date
Date	Type of Chart	None known ☐			
		Medicine / Agent	Description of reaction		

- Write clearly in block capitals, using a black ballpoint pen
- Use approved names for medicines
- Never alter a prescription
- Route of administration
  The only acceptable abbreviations are:

IV	- intravenous	SL	- sublingual	NG	- nasogastric
IM	- intramuscular	PR	- per rectum	ID	- intradermal
SC	- subcutaneous	PV	- per vagina	TOP	- topical
INHAL	- inhaled	NEB	- nebulised		

  Never abbreviate ORAL or INTRATHECAL
  Specify RIGHT or LEFT for eye and ear preparations

- Write the medicine dose clearly
  - The only acceptable abbreviations are:
    g - gram mg - milligram ml - millilitre
    all other doses must be written out in full eg. micrograms
  - Avoid decimal points eg. 100 micrograms (not 0.1mg). If unavoidable, write zero in front of the decimal point
  - Prescribe liquids by writing the dose in mg
  - For 'as required' medicines, state the symptoms to be relieved, the minimum time interval between doses and the maximum daily dose
  - Write units as 'units' not 'iu'

ONCE ONLY

CODES FOR NON-ADMINISTRATION OF PRESCRIBED MEDICINE

If a dose is not administered as prescribed, initial and enter a code in the column with a circle drawn round the code according to the reason as shown below. **Inform the responsible doctor in the appropriate timescale.**

1. Patient refuses
2. Patient not present
3. Medicines not available - CHECK ORDERED
4. Asleep / drowsy
5. Administration route not available - CHECK FOR ALTERNATIVE
6. Vomiting / nausea
7. Time varied on doctor's instructions
8. Once only / as required medicine given
9. Dose withheld on doctor's instructions
10. Possible adverse reaction / side effect

Bone mineral density (BMD) measurements

NHS Lothian Osteoporosis Service

Study date: 12 September 2014

Surname: Hallday Forename: Shona Date of Birth: 06/11/1975

Hospital: WGH Consultant: DR NEIL DOUGLAS MCKAY CHI No: 0611751143 Age: 38

DIAGNOSIS

	BMD g/cm^2	T-Score	WHO Diagnosis	% of age matched population with lower BMD	% Change since
Spine (L1,L2,L3,L4)	0.991	-0.5	Normal	38	
L Fem Neck	0.722	-1.1	Osteopenia	18	
L Total Hip	0.82	-1	Osteopenia	18	

For the sites measured the WHO category is: OSTEOPENIA

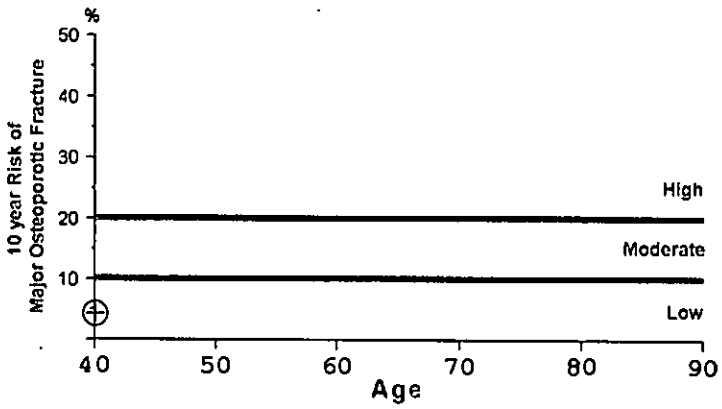
10 Year Fracture Risk

Hip Fracture Risk	0.7%
Major Osteoporotic Fracture Risk (spine, forearm, hip or shoulder)	4.3%

Ht(cm): 165 Wt(kg): 73

Evaluation of risk based on femoral neck BMD,age and clinical risk factors using the WHO Fracture Risk Assessment Tool (FRAX)

10 year fracture risks calculated and plotted using minimum possible age for FRAX tool (40 years)



TREATMENT SUGGESTIONS Relevant factors: low dietary Ca
Current daily dietary calcium = 580mg (recommended daily intake is 1000mg)
Due to low calcium intake the patient should be advised to increase dietary calcium.

Lifestyle advice only is recommended.

Lifestyle advice: perform weight bearing exercise, avoid smoking and excessive alcohol intake, follow a healthy diet with adequate calcium and vitamin D. Patient information and advice is available from the National Osteoporosis Society (Helpline 0845 450 0230)

Treatment suggestions are generated using a computer program.

20/10/14

IMMUNOLOGY SERVICES **CLINICAL IMMUNOLOGY REPORT**

SURNAME	HALLIDAY	**D.O.B.**	06/11/1975	**LAB REG. No.**	HI876420P
				Specimen:	Blood
FORENAME/S	SHONA			**DATE SAMPLE TAKEN**	08/10/2012 15:11
HOSPITAL NUMBER	600101156L			**DATE RECEIVED**	09/10/2012 14:05

TEST	RESULT		NORMAL RANGE
Classical Complement Pathway	93.8	%Activity	(47.6 - 130.4)
Please note that this assay has an absolute requirement for serum and so plasma samples are not tested.However, if the Lab has received a pre-aliquoted sample(this will be stated at the foot of this report)it is not possible to determine its coagulation status and therefore the result may be unreliable.			
C3	1.82	g/l	(0.81 - 1.57)
A decrease in C3 can be caused by activation of both the classical and alternative pathways.Thus it can follow from immune complex disease(eg.systemic lupus erythematosus)or acute bacterial infection(eg.post-streptococcal glomerulonephritis).Serial determinations are sensitive monitors of disease activity.Persistant low levels can rarely be due to the presence of C3 nephritic factor.C3 is also an acute-phase protein and therefore levels can be raised in infection, inflammation or injury.This increase can mask increased consumption of C3.			
C4	0.40	g/l	(0.13 - 0.39)
C4 is a protein of the classical complement pathway and is therefore activated in immune complex disease.C4 null alleles are common and affect the baseline levels. It cannot therefore be used as a marker of activity in systemic lupus erythematosis but serial determinations can be used to monitor disease activity.A low C4 together with a low C1 Esterase Inhibitor is strongly suggestive of hereditary angiodema.C4 is often reduced in pre-eclampsia.C4 is also an acute-phase protein and therefore levels can be raised in infection, inflammation or injury.This increase can mask increased consumption of C4.			
Rheumatoid Factor	42.2	IU/ml	(0 - 20)
IgM Rheumatoid factor found in ~80% of patients with active Rheumatoid Arthritis. Can be found in other conditions or the elderly and are not significant unless patient has synovitis.			

MRI normal.

Clinically no synovitis

MRI for 6/11/12

IMMUNOLOGY SERVICES **CLINICAL IMMUNOLOGY REPORT**

SURNAME	HALLIDAY	O.O.B.	06/11/1975	LAB REG. No.	HI876420P
				Specimen:	Blood
FORENAME/S	SHONA			DATE SAMPLE TAKEN	08/10/2012 15:11
HOSPITAL NUMBER	600101156L			DATE RECEIVED	09/10/2012 14:05

TEST	RESULT		NORMAL RANGE
Cyclic Citrullinated Peptide	471.0	u/ml	(0 - 4.8)

Anti-CCP antibodies are more specific than Rheumatoid Factor for diagnosing Rheumatoid Arthritis(RA)and are present in approximately 70% of early stage RA patients .They are good predictors of radiographic joint disease and may be useful in discriminating between erosive osteoarthritis and RA.These antibodies may be present up to 10 years prior to diagnosis and so are highly predictive of the future development of RA in both healthy subjects and patients with undifferentiated arthritis.Anti-CCP are only rarely found in patients with Juvenile Idiopathic Arthritis and are not associated with Lupus Arthropathy but their presence in Sjogren's Syndrome is indicative of future RA.In patients with clinical symptoms of Polymyalgia Rheumatica their presence is strongly suggestive of elderly onset RA.Anti-CCP occur in a subgroup of patients with type 1 autoimmune hepatitis who have a greater occurrence of cirrhosis at presentation and higher incidence of death from hepatic failure.

Anti ds DNA	6.6	IU/ml	(0 - 15)
ENA Screen	Negative		

This sample has been screened for antibodies to Ro,La, Sm,RNP,Scl70 and Jo1 and is negative for all of them.

Test Refusal	Not Tested		

One of the autoantibodies listed below has been requested.These autoantibodies can be present many years after diagnosis and do not respond to treatment. Consequently,frequent repeat testing cannot be justified.A previous request for one of these autoantibodies to be tested in this patient has been made within the last 6 months and has therefore been denied on this occasion.

Anti-Nuclear Antibody(ANA),Extractable Nuclear Antibody (ENA),Thyroid Peroxidase Antibody(TPO),Intrinsic Factor Antibody(IFA),Steroid Cell Antibodies(Ovary,Testes, Adrenal),Gastric Parietal Cell Antibody(GPC),

MRI Wrist Rt

Clinical details

bilateral hands and wrists pain,inflmmatory histry but no overt synovitus,CCP positve, High ESR ,please look for subclinical synovitis.

MRI Both Hands & Wrists

Coronal T1W and PD fat sat imaging has been obtained from distal forearms to fingertips.

There are normal appearances to distal radius and ulnar, carpus, metacarpals and phalanges with no bony rosions evident. The articulations in wrists and hands appear unremarkable, with no joint effusions. No overt periarticular soft-tissue thickening or oedema / inflammation and no overt synovitis.

Normal musculotendinous appearances bilaterally.

Reported by Dr M L Errington.

IMMUNOLOGY SERVICES **CLINICAL IMMUNOLOGY REPORT**

SURNAME	HALLIDAY	**D.O.B.**	06/11/1975	**LAB REG. No.**	HI931256W
				Specimen:	Blood
FORENAME/S	SHONA			**DATE SAMPLE TAKEN**	03/02/2014 15:52
HOSPITAL NUMBER	600101156L			**DATE RECEIVED**	04/02/2014 13:31

TEST	RESULT		NORMAL RANGE
CH50(haemolytic Complement)	Insufficient Sample		
C3	1.74	g/l	(0.81 - 1.57)
A decrease in C3 can be caused by activation of both the classical and alternative pathways.Thus it can follow from immune complex disease(eg.systemic lupus erythematosus)or acute bacterial infection(eg.post-streptococcal glomerulonephritis).Serial determinations are sensitive monitors of disease activity.Persistant low levels can rarely be due to the presence of C3 nephritic factor.C3 is also an acute-phase protein and therefore levels can be raised in infection, inflammation or injury.This increase can mask increased consumption of C3.			
C4	0.35	g/l	(0.13 - 0.39)
C4 is a protein of the classical complement pathway and is therefore activated in immune complex disease.C4 null alleles are common and affect the baseline levels. It cannot therefore be used as a marker of activity in systemic lupus erythematosis but serial determinations can be used to monitor disease activity.A low C4 together with a low C1 Esterase Inhibitor is strongly suggestive of hereditary angiodema.C4 is often reduced in pre-eclampsia.C4 is also an acute-phase protein and therefore levels can be raised in infection, inflammation or injury.This increase can mask increased consumption of C4.			
Rheumatoid Factor	56.9	IU/ml	(0 - 20)
IgM Rheumatoid factor found in ~80% of patients with active Rheumatoid Arthritis. Can be found in other conditions or the elderly and are not significant unless patient has synovitis.			
Cyclic Citrullinated Peptide	335.0	U/ml	(0 - 4.8)
Anti-CCP antibodies are more specific than Rheumatoid Factor for diagnosing Rheumatoid Arthritis(RA)and are present in approximately 70% of early stage RA patients .They are good predictors of radiographic joint disease and may be useful in discriminating between erosive

osteoarthritis and RA.These antibodies may be present up to 10 years prior to diagnosis and so are highly predictive of the future development of RA in both healthy subjects and patients with undifferentiated arthritis.Anti-CCP are only rarely found in patients with Juvenile Idiopathic Arthritis and are not associated with Lupus Arthropathy but their presence in Sjogren's Syndrome is indicative of future RA.In patients with clinical symptoms of Polymyalgia Rheumatica their presence is strongly suggestive of elderly onset RA.Anti-CCP occur in a subgroup of patients with type 1 autoimmune hepatitis who have a greater occurrence of cirrhosis at presentation and higher incidence of death from hepatic failure.

Anti Nuclear Antibody	**Negative**	
ENA Screen	**Negative**	

This sample has been screened for antibodies to Ro,La, Sm,RNP,Sc170 and Jo1 and is negative for all of them.

Patient Consent Form

Study Title: ***Scottish Early Rheumatoid Arthritis (SERA) inception cohort and biobank***

Name of Researcher: Dr Neil McKay

	Please initial each statement	
	Yes, I agree	No, I do not agree
1. I confirm that I have read and understood the information sheet (version 2.1) for the above study and any questions I have asked have been answered to my satisfaction	✓	
2. I understand that my participation is voluntary and that I am free to withdraw at any time, without giving reason, and without my medical care or legal rights being affected	✓	
3. I understand that sections of my medical notes may be looked at by responsible individuals who are either working on this study or from regulatory authorities where it is related to my taking part in this study. I give permission for these individuals to have access to my medical records	✓	

	Yes, I agree	No, I do not agree
4. I understand that my General Practitioner will be informed that I have agreed to participate in this study	✓	
5. I agree to take part in the above study	✓	
6. I agree that information about my health, including laboratory results, may be extracted from my NHS records now and in the future for health-related research purposes.	✓	
7. I agree that I may be contacted to be asked to attend follow up study visits	✓	
8. I agree that my urine, blood, DNA and joint fluid may be stored in the biobank, and that it may be analysed now or in the future.	✓	
9. I agree that I may be contacted in the future about other research projects, but that I am under no obligation to take part in such projects	✓

Your patient has agreed to take part in the Scottish Early Rheumatoid Arthritis (SERA) cohort. This is a prospective inception cohort of patients with newly diagnosed RA or undifferentiated polyarthritis. Patients will have blood taken for a biobank at 0, 6 and 12 months and they will be reviewed clinically every 6 months indefinitely. The aim is to construct a detailed clinical database of patient outcomes that can be correlated with biomarkers that may allow the development of individualised protocols of management in the future.

You will be sent regular reports on the patient as part of their routine care but please don't hesitate to contact the department if you have any queries.

Many thanks,

Roz Jones
Research Nurse
