Attachment	Attachment A Referral Letter from Dr N Ehimwenma, St ***** Surgery (Hull)
------------	--

18-May-2026 EHIMWENMA, Norene Elliott Chappell Health Centre, Surgery

Comment History Seen at A and E yesterday due to pain. Had labs, CT scan which showed NAD. Pain was thought to be from a hiatal hernia and was discharged with Lansoprasole. Has attended today with pain, which she says is in the L hip region at the back. Says has tried several meds in the past, including morphine, which did not help. Cannot take ibuprofen, paracetamol, codeine as she mentions that she reacts to them. Presently on Nortryptiline and Pregabalin. No CES

Comment Examination Alert. Abd; SNT. Nil guarding/rigidity. Ambulates with a stick without *****. Nil gait impairment.

Comment Plan -Referred to pain clinic. -Advised to call back if any further ***** or if symptoms worsen.

Comment History fup re; not sleeping well and Suicidal thoughts spoke to pt who says her ***** still ***** and so much going on that she needs to sort out so has not had time to contact lets' talk. says still has poor sleep. tells me she has to cut the call to receive a call from prison. (we agreed i'll call her back in 20mins) called pt back 4.58 says has supportive family and friends admits to self cutting with razors and says hasnt contacted CRISIS since here in HULL. ive strongly recommended to prioritise contacting lets talk, continue her meds and call CRISIS when overwhelmed. she has good judgement and insight and understands and agrees with the plan. PIL on sleep hygiene sent fup in 3/52

Read Code Message Advice & Guidance Response from Breast Surgeon, DPoW - (copy sent to NC):- 06-Aug-2024 10:10
 - Sent by CUTTING, ***** (Miss) (Service Provider Clinician) Thank you for your request for Advice & Guidance for: NICOLA BURNS 6330280509 Breast History: Right breast conserving surgery for High Grade DCIS, excised 2020, with further excision in 2021 (complex pathway, declined completion mastectomy, may have taken Tamoxifen briefly). She has a family history of breast cancer. Your query is whether she would be suitable for HRT. I note her other health issues and regular medications. I suggest that every alternative to HRT should be explored, including prescribable alternatives (see British Menopause Society "Tools for Clinicians"), guided by which symptoms she is experiencing. In her case, DCIS had several adverse features including very large size, high grade, necrosis and microinvasion. An operation for further excision many months after primary surgery may have technical challenges. The patient declined the MDT advice for completion mastectomy. I suggest that systemic HRT should be avoided. However, topical vaginal estrogen cream in low dose could be considered. Courses of treatment should be as short as is effective, spaced for as long as possible. Considering all factors, I would not recommend other HRT use in this patient, including oral/patch/gel due to systemic absorption and risk of future breast cancer. I have attached a consensus statement on Breast Cancer and HRT which may also be useful. BW Miss ***** DM FRCS Consultant Oncoplastic Breast Surgeon she/her/hers and they/them/theirs Northern Lincolnshire & Goole NHSFT Breast Clinical Delivery Group Lead Humber and North Yorkshire Cancer Alliance Honorary Senior Lecturer University of East Anglia: Oncoplastic Breast Surgery Specialist Mastership Programme

Read Code	***** health assessment Nicola attended her SMI physical health check appointment at Market *****. She expressed being low in mood and a bit depressed, mentioning the loss of her money last week, which impacted her ability to eat properly. She couldn't afford to buy food, so I advised her to seek assistance from Citizen Advice for directions to a food bank or a place where she could access free hot meals. Nicola disclosed ongoing physical health issues, including a history of breast cancer resulting in pain after mastectomy. She has been referred to pain management and also experiences heart problems. Throughout the intervention, Nicola remained stable, engaged well, and maintained good eye contact. She reported taking her prescribed medications, but expressed ***** about the effectiveness of aripiprazole, requesting a review. Nicola did not identify any psychosis, hearing hallucinations, or experiencing visual hallucinations. She shared that her suicidal thoughts have become more severe, but she attempts distraction strategies. Nicola has the crisis team contact number for support.

Dear Miss Burns, In line with current NICE guidance, we have changed the dose of your ferrous fumarate 210mg tablets - take one tablet twice daily, to one tablet daily. Recent studies have shown iron is better absorbed and better tolerated when taken once daily on an empty stomach. As part of your treatment, we advise you to maintain an adequate balanced intake of iron-***** foods (for example dark green vegetables, iron-fortified bread, meat, apricots, prunes, and raisins). Thanks, *****

Read Code Overview Notes Contacted pt as per task 28.06.23 - Multiple discussions with her about this since Jan 22. - Codeine, tramadol, duloxetine, naproxen, dihydrocodeine had no effect at all. - Pregabalin & nortriptyline on rpts but she feels these also have little benefit although doesn't want to stop. - She confirmed that NSAIDs exacerbate her asthma & paracetamol gives her a rash, blisters and facial swelling. - Medication mgt has not been helpful to her. - She would like to try non-pharmacological options. - Noted pt reviewed by cmhs 23.06.23. No changes made. - Pain clinic - discharged april 23 - DNA'd appt - CBT - she wishes to try this esp because mood has been low lately, says she is struggling. - WAWY - noted CMHT signposted due to alcohol intake. Pt says she doesn't have any contact details so provided via accurx. She states she switched brand to 5-8 cans of beer a every 3 days. She would like to stop. - physio - noted she tried in the past and didn't help because she was in too much pain at the time. Does not wish to try again at this time due to MH being down. - Signposted to WAWY & CBT. Rv as needed.

Comment History seen with PA - mutiple issues 1) pain problem - current meds not helping. seeing pain team. not finding them helpful. 2) chest pain - for 2 months. recurrent. chest tightness. can come up anytime, lasts for few minutes and then resolves. last attack was last week. none since. worried as fhx of heart problems. 3) urinary symptoms for few weeks.

Comment Plan re pain - increase nortryptiline to 30mg ON. rv in 2 weeks or earlier if concerned. re chest pain - bloods + ecg - referral to racp clinic. trial gtn spray in the interim. re urinary issues - drop urine for dipstick and cs - treat according to results - if persistent symptoms but normal tests, then follow up .

Read Code O/E - weight 80.0 Kg

Read Code O/E - Systolic BP reading 139.0 mmHg

Read Code O/E - Diastolic BP reading 74.0 mmHg

Read Code Oxygen saturation at periphery 98.0 %

Read Code Increased frequency of urination

Comment History Ongoing constant right sided breast pain (see letter from pain clinic) 2 year history - started after breast operation for cancer. Describes the pain as sharp. Pain radiates to shoulder and down arm Feels nauseous and dizzy. Has vomited multiple times - most recently this morning (fluid, no blood) Medication not helping pain. Supportive bra not helping. Unable to sleep due to pain. Scores the pain 10/10. 2 months ago, had one episode of left sided weakness following chest pain. Experiences chest pain occasionally since then. Most recent chest pain was last week. Pain is sharp in character Radiates to her shoulder and jaw Lying down helps with the pain. Pain was resolved within 1 hour. Didn't seek any medical support. For 3 weeks, has experienced a strong offensive smell to her urine. Increased frequency of urination No discharge Says her urine is much darker. Drinks "a lot" of water. Still having continual suicidal thoughts as previous histories Discussed with Dr *****

Comment Examination Looked generally well. Appropriately dressed for circumstances. Well kempt. Not tearful. 139 / 74mmHg O/E - pulse rate 82 bpm Oxygen saturation at periphery 98 % O/E - weight 80 Kg (≈ 12 st 8 lb) Breast examination: left NAD, right: surgical scar on lateral side, generalised tenderness in all quadrants, no discharge, no skin changes. Chest examination: NAD, bilateral air entry, heart sounds normal, vesicular breathing

Comment Diagnosis Chronic pain

Comment Plan Increase nortryptiline. Referral to cardiology due to chest pain. To attend for blood tests and ECG. To provide urine sample. Patient happy with plan.

Read Code Overview Notes Discussed pain clinic letter 02.11.22 with patient. Pregabalin dose is currently 150mg tds. She is happy to trial a reduction in the afternoon to 125mg. Increase in mirtazapine to 30mg made no difference. She forgot to order them and resorted back to the 15mg. In view of the letter, she feels pain is causing low mood and more important to treat. She states she would like to stop mirtazapine and start nortriptyline. Plan - Reduced pregabalin to 150mg BD and 125mg in the afternoon. - Stopped mirtazapine 15mg. - Started Nortriptyline 10mg ON. - R/v in 4-6 weeks.

Read Code Prescription dose change

21-Nov-2022 KHANUM, Sheafa Ancora Medical Practice -Ashby RoadAncora Medical Practice -Ashby Road

Read Code Relevant current medication - A small reduction of 25mg in the overall daily dose of Pregabalin. If no change to her pain she can continue to reduce in 25mg increments every 2 weeks or so until she has come off the medication altogether. - trial of Nortriptyline at this particular time might not be appropriate due to being on mirtazapine and aripiprazole (risk of serotonin syndrome). This could then be trialled at a later stage if the situation changed.

 Read Code Overview Notes Contacted pt re supply issues, holiday supply, and requesting monthly issues. 1) Aripiprazole - explained that we have sent an Fp10 to collect from reception and she can try another pharmacy. Advised her that weldricks at ironstone have them in stock. 2) holiday supply - she is going to turkey for 2 weeks - the supply was sorted by PSA **** yesterday and she has everything apart from the aripiprazole ready. 3) monthly supplies - noted CMHT entries regarding suicidal thoughts & intending to have an overdose. Discussed with Nicola weekly supplies would allow us to monitor her better for now while she is going through a difficult time. She has been added to the weekly folder so the senior PSA will arrange weekly issues. She was happy to know that she did not have to request every week. She agreed to continue weekly issues going forward until things become more stable in her life. 4) low mood - Nicola and I spoke in Aug re increasing the dose of Mirtazapine and we both agreed that it may be better to r/v that with CMHT. The practice received an email response on 06.09.22 by CMHT (it can be found within communications and letters) - states "if you wish to increase Miss Burns Mirtazapine and this is indicated then you can titrate this to effect by liaising with Miss Burns". - Agreed to call her back after her holiday and see how things are and r/v mirtazapine dose at that stage if needed. Appt booked 04.10.22

Read Code Message Spoke with ***** regarding this pt - she states that she has not been able to get medication from pharmacy for 4 days now - advised that there is a prx waiting at ancora pharmacy for her as she is on pre dated scripts - She advised that Nicola has told her she is suicidal and requesting to speak to a GP - I asked Holleigh to take over the call due to being unsure of the next steps to take - Holleigh advised the ***** that if he pt is suicidal she would need to contact the crisis team, though this usual has to be the patient themselves. Seama (*****) advised the pt told her she was going to order medication and take an overdose - i can see a request for 2 weeks worth of meds as pt going on holiday- i then asked if this needs to be stopped? Seamar said no as pt is going on holiday? - Seamar asked if this could be passed to a GP, i advised is she felt the pt was at risk of suicide she needed to ring the ***** for a welfare check ASAP. Seamar seemed unsure of what to do, Dr ***** then came into reception so we asked his advise- ALY advised the same that she needs to either seek crisis team or ring the *****.

Comment History telephone call. last few days new vertigo- room spinning on moving head, ok when still. vomiting, struggling to keep anything down- is sipping water. hasn't eaten for a few days. unilateral tinnitus and ear pain, reduced hearing- states ear looks red externally, possibly swollen, also feeling feverish. has had neg LFT. asked to press mastoid, states affected side possibly feels softer than other side. has suffered from vertigo in past- this is a little difference to her usual presentation no facial drooping/weakness/numbness

Comment Examination speaking in sentences, sounds oriented.

Comment Plan needs F2F assessment needs examination- ?ear infection affecting mastoid could possibly need admission via ENT. ***** can drive up to urgent access this afternoon- thank you

Comment History Pain Post Op Breast states having post op breast pain - 2 x surgeries = initially in may 2020 - then reconstruction last year around Jun time. since then severe pain, like electric shock in the right breast. seen breast team in oct, was given tramadol but it didnt work. awaiting further appt for mamogram, but unaware if would be reviewed by a clinician or not. started on duloxetine by sheafa recently. taking it with no effect. says alot of other pain killers including naproxen doesnt suit her. also feels her ***** health is being affected. she is getting thoughts of self harm and suicide. not planing to act upon it. 3/52 spoke to crisis team, states they said someone was going to come out to asses her further however not heard anything from them yet. ***** her own.

Comment Plan detailed discussion - agreed self referral to the crisis team - I will also write a letter- agreed will write to breast team to review her urgently regarding her pain. agreed to increase dose of duloxetine to 60mg OD, r.v in 3 weeks or earlier if concerned.

Magnetic resonance study; MRI Diffusion weighted brainpls check whether the patient has
appointment with neurologist - and send a copy of MRI report to the neurologyb secreatry, MRI
Diffusion weighted brain Result: MRI brain . CLINICAL HISTORY ? Seizure 3 episodes loss of
consciousness persistent left-sided headache? seizure . FINDINGS There are multiple lesions which
are primarily involve the subcortical white matter but several may also involve the cortex distributed
throughout both hemispheres principally in frontal and parietal regions. These lesions could be due to
a vasculitic process. They are certainly more than one would expect for a patient of this age and also
involve cortex. Further investigation is recommended. Brain is otherwise normal . CONCLUSION The
appearances suggest possible vasculitis. Further investigation recommended . Electronically signed

Accident and Emergency Letter from A&E -> Ancora Medical Practice

01-Apr-2019 MAXWELL, Ashleigh Ancora Medical Practice -Ashby RoadAncora Medical Practice -Ashby Road

Read Code Message A/RD KP called me into room to explain to myself and PT that is wanting to call Ambulance for PT due to central chest pains - She wanted to find her friend first as he has her phone and will not go without him. I looked around the reception/pharmacy and outside of building - friend was not there. KP is doing a letter for her to attend A&E as she states as soon as she finds her friend she will attend but does not want an ambulance phoned. KP made PT aware of how serious the symptoms are and that if symptoms are to get worse whilst waiting for letter to let us know straight away and we will phone ambulance. PT has capacity to make this decision - Letter passed to PT who has now left the building to find her friend.

Read Code Haemoglobin A1c level - IFCC standardised HbA1c 42- 32.0 mmol/mol
 47 mmol/mol: indicative of non-diabetic hyperglycaemia.
 At risk of developing type 2 diabetes. Consider
 implementing lifestyle measures. Please refer to NICE
 Guideline PH38 (Sept 2017) HbA1c >= 48 mmol/mol:
 possible diabetes. If patient symptomatic, diagnosis
 confirmed. If patient asymptomatic re-test within 4 weeks.
 Please refer to NICE Guideline NG28 for treatment
 guidance. Take urgent same-day action if suspecting type
 1 diabetes (HbA1c may be normal). HbA1c is accepted for
 the diagnosis of type 2 diabetes in the UK, but should not
 be used to diagnose type 1 diabetes or in the following
 contexts: childhood, pregnancy, renal failure,
 haemoglobinopathy trait, anaemia, HIV, abnormal red cell
 turnover or any recent treatment likely to affect glycaemia
 or red cell turnover.

Read Code Patient reviewed
Comment Comment Patient has been struggling with depression for past 2 months. Self harmed in March and was seen by Crisis team, but says no body followed her up. Self harm again on Sunday - suicidal cuts wrists and legs. Says would have gone deeper if had implement to do so. Currently actively suicidal. Requesting help from crisis team but says they havent called her back from Sunday. Appt booked for tomorrow with TC has been cancelled. This appointment was routine appt - would rather discuss face to face, about results Advised I would call Crisis team for nicola, she was happy if they could call her back today that she could keep herself safe. Advised patient to call us back if not heard from them by 2 pm or if worsening suicidal ideation. Happy with plan Spoke with Crisis team - last note they had on system was from April, not this weekend., Lost to follow up due to poor compliance with appts from patient. They will call Nicola back today before 2pm and inform us of the outcome of the conversation

Read Code Ankle injury
 Comment History Right ankle injury - pt states fell yesterday - inverted her ankle on uneven ground. No pain at TOI and could walk home but today states has got up and ankle is swollen and painful.
 Comment Examination Right knee / lower leg (tibia / fibula) / calf / achilles / ankle (lat and med. malleolus) / foot (tarsal / MTs bones) / toes – assessed. Swelling and discomfort to right lateral malleolus ? bony tenderness, no other signs of injury. No obvious deformity or dislocation. ROM intact, slight discomfort on mobility and WB. Sens and circ intact.
 Comment Diagnosis Ankle injury
 Comment Plan Assess - Discomfort to right lateral malleolus ?? bony tenderness. Clinically more indicative of soft tissue injury but patient advised cannot exclude #. Xray declined, to treat injury conservatively. DTG applied with advice to remove bandage at night, advised RICE, gentle mobilisation, avoid sport for 1/52 and analgesia (advised NSAIDS prn pc if tolerated and paracetamol prn), observe and review sos

Comment	History Dysuria, frequency and offensive urine for 4/7. Lower back pain. No haematuria. C/o fever, says some shaking ?rigors (has put this down to her medication - on betahistine and citalopram). No vomiting. No recent UTI's. Requested citalopram Was seen in January with feeling down commenced on citalopram Says trigger was when sister and father died in November. Had suicide attempt at time, unsuccessful. Says no help at all with citalopram, still feels hopeless and down. some days unable to get out of bed and 11yr old son has to get himself out of bed. Unable to sleep, has days where doesn't eat. Still self-harming, cutting breasts and punching walls etc. No thoughts of suicide at the moment but says the feelings come and go. Has spoken to lady from Navigo January, had no follow-up since regarding depression. Has been issued scripts for citalopram though. Says no one around the area who she can talk to, many worries with family, financial and housing at present.	
Comment	Examination Comfortable at rest O/	
Comment	Examination abdo soft, tender right lower quadrant, renal angle tenderness right side. Temp 35.4, HR 92 bpm, 124 / 86mmHg Urinalysis = abnormal 1+ leu, nit -ve, 2+ blood	
Comment	Diagnosis Infection of urinary tract	
Comment	Plan Discussed with Dr Cheema Send MSU for culture. Gradually reduce citalopram over the next 2 weeks then start sertraline Advised patient can self refer to CRUSE or OPEN MINDS Advised re. crisis team and when to ring. Will review in 2 weeks time.

Comment	History Asking for Stemetil (prochlorperazine) from pharmacy, when actually meant to ask for betahistine. Had seen me 3 weeks ago with dizziness, no improvement on prochlorperazine nor cyclizine. Started on betahistine which has made some improvement, but dizziness still present. Seen by ophthalmologist for visual field defect and subsequently referred for MRI. MRI showed bilateral, deep high signal foci. Suspicious of demyelination. Has been referred to the neurologist and awaiting an appointment. I - aware of scan result C - no, more reassured that something has been found E - Repeat of whichever tablet she should be on	
Comment	Plan d/w Dr Melton Re-issue betahistine 16mg TDS. Not on repeat Explained to return to see dr if need repeat prescription and to review neurologist findings.

Read Code	O/E - Diastolic BP reading	90.0 mmHg
Comment	History Continues to feel dizzy, has been going on since July last year. Now all the time. Tried Cyclizine and Prochlorperazine, neither have made any difference. Dizzy when keeps head still and standing up, but not when keeps head still sitting down. Worst when lying down and rolling in bed. Makes Nicola nauseous and vomits at least 3-4 times each night as a result. No vomits during day. Has fallen over possibly with LoC, last fall about a month ago. Has cut down EtOH from 8 pints per night since Nov last year as a result of sister and father's deaths in short period, now 4-5 330ml bottles of Heineken per weekend. On B12 for pernicious anaemia. Had these symptoms before started on citalopram. I - don't know C - don't know what it could be! E - treatment	
Comment	Examination 125 / 90mmHg O/E - pulse rhythm regular Both ear drums - NAD No dysdiadochokinesia. No nystagmus. No slurred speech. No past pointing.	
Comment	Plan d/w Dr Opie. Review if not improving.

 Comment **Comment** See above telephoned again, patient said not aware had an appointment problemss with post). Patient said asthma control fantastic not needing inhalers, not used Seretide or salbutamol for months. Not wanting spirometry, because life too busy at the moment. Patient said "I feel brilliant since last cigarette one month ago my breathing, sleeping & skin is better". Under the care of the breast care team, but next appointment is next year. Patient unhappy about the pain in right breast, on evening primrose oil, will follow up if not helping. Wanting to move back to Scotland, but unsure if right option for her. Agreed to telephone in June to arrange next asthma review

 Comment History c/o 4/52 history of cough productive of green sputum, associated with SOB and some chest pain on inspiration. also c/o creamy PV discharge, fishy smell and some PV bleeding. has had thrust and BV before, bt isn't sure which this is. Also thinks that she's got vaginal warts, but is unsure where she may have got them from - but is worried as they are spreading.
 Comment Examination looks well, chest - good air entry, no tenderness on spring the chest wall, no pain on deep inspiration, no wheeze, RLL scattered crepitations. Pv exam - chaperones by A. Oxenforth - no warts seen (what patient is referring to is actually a sebaceous cyst) - cervix clearly visualised, normal in appearance - no tenderness, small amount of old blood seen. triple swabs taken to ring up for results.
 Comment Diagnosis Respiratory tract infection
 Comment Plan warned about post-infectious cough, but if doesn't feel it has improved after antibiotics, to come back. to ring for swab results in 5 days. reassured her that I could not see any vaginal warts.

Result: Magnetic resonance study; MRI Diffusion weighted brain pls check whether the patient has appointment with neurologist - and send a copy of MRI report to the neurology secretary, MRI Diffusion weighted brain Result: MRI brain . CLINICAL HISTORY ? Seizure 3 episodes loss of consciousness persistent left-sided headache? seizure . FINDINGS There are multiple lesions which are primarily involve the subcortical white matter but several may also involve the cortex distributed throughout both hemispheres principally in frontal and parietal regions. These lesions could be due to a vasculitic process. They are certainly more than one would expect for a patient of this age and also involve cortex. Further investigation is recommended. Brain is otherwise normal . CONCLUSION The appearances suggest possible vasculitis. Further investigation recommended . Electronically signed by: Dr ***** Consultant Neuroradiologist GMC 2701918 Everlight Radiology Please contact the Everlight UK coordination centre on 0300 400 2222 should you have any queries relating to this report

Hull and East Yorkshire Integrated Pain Management Referral

Use this form for Community CHCP and Secondary HUTH pain management

Patient title & Surname	Miss Burns	Referrer Name and title	Dr Norensa Ehimwenma
First name	Nicola	GP Practice Address	St [REDACTED] Surgery (Hull) St Andrews Surgery, 215 Hessle Road, Hull HU3 4BB
Address	c/o St [REDACTED] surgery 215 Hessle Road Hull East Riding of Yorkshire HU3 4BB	Phone	01482 336810
DOB	21 Apr 1972	Email	
NHS Number	633 028 0509	Date of Referral	18 May 2026
Email	smoosmoo72lw.lw.@gmail.com (Unverified)		
Main Language	Main spoken language English		
Ethnicity	White British - ethnic category 2001 census		

Please tick as appropriate

Is an interpreter required? If yes, please state which language: <Language>	☐
Do they have a communication need ? If yes, please give details: <Communication needs>	☐
Does the patient consent to sharing their record ? This can be very useful, especially in complex patients?	☐
Are you satisfied that any serious underlying pathology is unlikely ?	☐
Is the patient under any other specialty for investigation or management of any associated conditions? If yes, please give details	☐

Reason for referral

Back pain	☒
Radicular pain / Sciatica	☐
Neuropathic pain	☐
Generalised widespread pain, Fibromyalgia	☐
Other Persistent pain conditions	☐

Please give a concise summary of the **pain history**

Has had back pain for several years. Has failed to respond to simple analgesia and neuropathic agents.

Please indicate any significant [REDACTED] **health problems, alcohol or substance misuse, opioid overuse or long-term use** issues.

Alcohol Intake: Occasional drinker,
Hx of Anxiety/depression

Please describe any **social issues** you are aware of, such as family dynamics, financial difficulties or employment issues

If possible, please indicate how and to what extent the pain condition is **affecting the patient's life**

Mentions pain affecting quality of life as making her worried and affecting moods.

What are the patient's **expectations**? Do you think the patient would engage with a holistic self-management approach or are they expecting an intervention such as injections or medication for their pain? Do they have any specific beliefs about their pain?

Miss Nicola Burns 21 Apr 1972 633 028 0509

Page 1 of 5

Please could you give details of any relevant **investigations** relating to their pain condition such as imaging or other specific diagnostic tests

Recent CTAP normal

It would be great if you could tell us about any past **treatments** that have been tried for this condition, such as physical, psychological, interventional or pharmacological treatments. Were they successful?

Nortriptyline, Pregabalin, Venlafaxine, Ibuprofen, Paracetamol have been used and found ineffective.

Auto-populated patient summary:

PMH

Asthma, Nov 2000
 Borderline personality disorder, 1995
 [REDACTED] disorders NOS, Apr 2026
 Recurrent depression, Mar 2001
 Small vessel cerebrovascular disease, Dec 2015

Repeat medication

Acutes: Fostair NEXThaler 100micrograms/dose / 6micrograms/dose dry powder inhaler (Chiesi Ltd), Maintenance: Inhale ONE puff TWICE a day. Reliever: Inhale ONE puff as required, for the relief of symptoms. If symptoms persist after a few minutes, another puff can be taken. Max 8 puffs total per day or as directed
 Repeats: Salamol 100micrograms/dose inhaler CFC free (Teva UK Ltd), inhale 2 doses as needed
 Pregabalin 100mg capsules, take one capsule three times daily
 Venlafaxine 37.5mg tablets, take one daily
 Simvastatin 40mg tablets, take one at night
 Nortriptyline 50mg tablets, Take TWO once daily at Night as directed
 Ferrous fumarate 210mg tablets, one to be taken daily
 Clopidogrel 75mg tablets, take one once daily
 Mebeverine 135mg tablets, take one 3 times/day
 Folic acid 5mg tablets, take one daily
 Lansoprazole 30mg gastro-resistant capsules, take one once daily
 Aripiprazole 10mg tablets, take one daily

Allergies

H/O: penicillin allergy
 Paracetamol allergy
 NAPROXEN
 Verification of allergy status
 Allergic disorder
 IBUPROFEN

Body Mass Index - 34.29 Kg/m², 14 May 2026

Select an appropriate service for referral based on the guidance below:

Community based pain clinic	☒
MSK / Physiotherapy services	☐
Secondary care pain clinic	☐
Others:	☐

Referral Guidance:

Back Pain with or without Sciatica – NICE guidelines (NG59) <https://www.nice.org.uk/guidance/ng59>

Exclude Red flags:

Risk Stratification: STarT back tool

Back pain without sciatica requiring pain assessment and management, should be referred to community Pain clinic in the first instance

Following patients with back pain can be referred directly to Secondary care

Inclusion Criteria:

1. Patients who failed to respond to primary care / community-based pain management
2. Patients with moderate to severe back pain with probable Facet joint pain (Pain with extension and lateral flexion, lumbosacral paramedian tenderness)
3. Sciatica with or without back pain (Pain radiating below the knee)
4. Persistent spinal pain following spinal surgery

Exclusion criteria:

1. Patient has been reviewed by the secondary care pain team in the past 12 months for the same pain condition and the clinical condition unchanged
2. Red flags

Neuropathic Pain - NICE guidelines (CG173) <https://www.nice.org.uk/guidance/cg173>

Most Neuropathic pain conditions can be managed in the community

Following patients with Neuropathic pain can be referred to secondary care:

Inclusion criteria:

1. Patients who failed to respond to primary care / community-based pain management
2. To establish the diagnosis of neuropathic pain condition
3. Pain in specific nerve distribution which may be amenable for a nerve block
4. Complex regional pain syndrome (CRPS)

Exclusion criteria:

1. Patient has been reviewed by the secondary care pain team in the past 12 months for the same pain condition and the clinical condition unchanged

Chronic widespread pain – Nice Guidelines (NG193) <https://www.nice.org.uk/guidance/ng193>

Including conditions like Fibromyalgia, Chronic Fatigue syndrome, ME

Most of these conditions can be managed under primary care / community-based pain management clinics

Following patients can be referred to secondary care pain management

Inclusion Criteria:

1. To establish a diagnosis of chronic Primary pain
2. Patients who require multi-disciplinary team approach in managing pain

Exclusion criteria:

1. Patient has been reviewed by the secondary care pain team in the past 12 months for the same pain condition and the clinical condition unchanged
2. Systemic inflammatory conditions like RA

Other Persistent pain conditions (Not back pain)

Most persistent pain conditions can be managed under primary care / community-based pain management clinic.

Following patients with persistent pain can be referred to secondary care:

Inclusion Criteria:

1. Patients who failed to respond to primary care/ community based pain management
2. Complex pain patients who require multi-disciplinary team approach in management of pain

Exclusion Criteria:

1. Patient has been reviewed by the secondary care pain team in the past 12 months for the same pain condition and the clinical condition unchanged

STarT Back pain tool

Please complete the STarT back score for all patients with Spinal pain

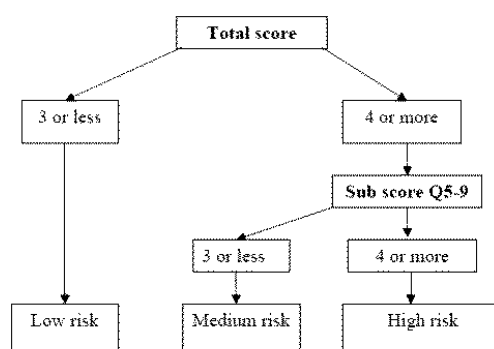

Pain in the last 2 weeks	Disagree	Agree
1. My back pain has spread down my legs at some point in the last 2 weeks	☐	☐
2. I have had pain in the shoulder or neck in the last 2 weeks	☐	☐
3. I have only walked short distances because of back pain	☐	☐
4. In the last 2 weeks, I have dressed more slowly because of back pain	☐	☐
5. It is not really safe for a person with a condition like me to be physically active	☐	☐
6. Worrying thoughts have been going through my mind a lot of the time	☐	☐
7. I feel my back pain is terrible and it is never going to get any better	☐	☐
8. In general, I have not enjoyed all the things I used to enjoy	☐	☐

9. Overall how bothersome has your back pain been in the last 2 weeks

Not at all	Slightly	Moderately	Very much	Extremely
☐	☐	☐	☐	☐

Total Score (All 9) _____ Sub Score (5-9) _____

Low risk for chronic pain - Patients can be managed by the GP - Reassure, advice to keep active and provide guidance on self-management

Medium risk for chronic pain – Advice to keep active and offer exercise programme, refer to physiotherapy / MSK services locally

High risk for chronic pain - Patients require combined physical and psychological programme under the community based pain clinic

Red Flags:

1. Age of first onset of severe spinal pain <20 or >55 years of age
2. Violent trauma (RTA / fall from height)
3. Night pain
4. Thoracic pain
5. Past Medical History of carcinoma
6. Systemic steroid use, Drug abuse, HIV
7. Systemically unwell
8. Weight loss
9. Widespread neurology
10. Structural deformity

Cauda equina syndrome (CES) – Signs and Symptoms

CES is accompanied by a range of symptoms, the severity of which depend on the degree of compression and the precise nerve roots that are being compressed.

Patients with CES may experience some or all of these “red flag” symptoms.

1. Urinary retention: the most common symptom. The patient's bladder fills with urine, but the patient does not experience the normal sensation or urge to urinate.
 2. Urinary and/or fecal incontinence. The overfull bladder can result in incontinence of urine. Incontinence of stool can occur due to dysfunction of the anal sphincter.
 3. "Saddle anaesthesia" sensory disturbance, which can involve the anus, genitals and buttock region.
 4. Weakness or paralysis of usually more than one nerve root. The weakness can affect lower extremities.
 5. Pain in the back and/or legs (also known as sciatica).
 6. Sexual dysfunction.
- If a patient is experiencing any of the "red flag" symptoms as above, they should attend A and E.

Sent: 08 May 2026 08:28

To: sms.b81027@nhs.net

Department of Radiology eResults - Faster, Safer, Greener**** THIS IS AN AUTOMATED SERVICE & REPLIES TO THIS MAILBOX ARE NOT ****

Dear Dr At St [REDACTED] Group

Thank you for referring your patient NICOLA BURNS to Hull University Teaching Hospitals for a Radiology exam. Please find the report below.

Please remember that all Radiology results are also available in [REDACTED] and Xero for HUTH referrers and on GP Browser for GP referrers.

Yours sincerely

Radiology Department

Hull University Teaching Hospitals			
Patient	NICOLA BURNS	DOB	21/04/1972
Patient ID	NHS Number: 6330280509	Attendance No. (internal use only)	21703002
	Hospital Number: HEY3151749		
Examination	XR Lumbar spine	Exam Date	30/04/2026 14:50
		Authorised Date	08/05/2026 08:26
Reported By	Mr 4Ways Radiologist	Authorised By	Mr 4Ways Radiologist
Examination Dated: 30/04/2026 14:26			
Title & Technique: XR Lumbar spine			
Clinical Details: Left lower back pain			
Findings: No comparison No sagittal malalignment Mild OA only Preservation disc space height throughout No fracture or bone lesion or malalignment			
4Ways Reporting Radiologist: Dr [REDACTED] - GMC 3588040 on 08/05/2026 08:26 Findings This report is intended to be [REDACTED] by medically qualified professionals; any patient [REDACTED] or decisions regarding medical treatment arising from its contents should be discussed with the patients's doctor or referring clinician.			

Results and Alerts will be sent as individual emails to the referrer and their medical secretary. You will not need to forward this on again. Email addresses can be changed by contacting the Radiology IT Team.

If these contact details are incorrect please contact hyp-tr.huthradalert@nhs.net with your updated information.

If the patient is no longer registered at your practice, please forward the result to hyp-tr.huthradalert@nhs.net.

Yours sincerely Radiology Department

Dear Miss Burns,

IMPORTANT - ASTHMA REVIEW

You are due for an asthma review. I would be grateful if you would contact your usual surgery to make an appointment to see the asthma nurse.

When you attend for your review it will normally last about 20 minutes and involves:-

- ~ asking you about the symptoms you are getting from asthma
- ~ checking your inhaler technique
- ~ advising you about monitoring your peak flow
- ~ organising a self management plan
- ~ any other issues related to asthma, e.g. flu vaccinations, medication, etc.

Please bring with you all of your inhalers and spacer devices to the surgery when you attend your clinic appointment.

We accept that it is not always possible to attend the surgery, if this is the case, please arrange a telephone review.

Alternatively if you feel your asthma is well controlled you may complete the enclosed Asthma Control Test and return it to the surgery for the attention of the Asthma Nurse. Please ensure we have you up to date daytime contact telephone number, just in case we need to contact you.

Yours Sincerely

DR. S.A. THRIPPLETON

Asthma Control Test (The Asthma Control Test™ is a trademark of QualityMetric Incorporated)

Nicola Burns 21 Apr 1972 Date Asthma control test

The Asthma Control Test™ below will provides us with a snapshot of how well your asthma has been controlled over the last four weeks. It gives a score out of 25. PLEASE RETURN THE FORM TO YOUR ASTHMA NURSE.

Step 1: each question below carefully, circle your score and write it in the box.

Step 2: Add up each of your five scores to get your total Asthma Control Test™ score.

Step 3: Use the score guide to learn how well you are controlling your asthma.

QUESTION 1: During the past 4 weeks, how often did your asthma prevent you from getting as much done at work, or home?

- 1 All of the time
- 2 Most of the time
- 3 Some of the time
- 4 A little of the time
- 5 None of the time

YOUR SCORE =

QUESTION 2: During the past 4 weeks, how often have you had shortness of breath?

- 1 More than once per day
- 2 Once per day
- 3 3 to 6 times per week
- 4 1 to 2 times per week
- 5 Not at all

YOUR SCORE =

QUESTION 3: During the past 4 weeks, how often did your asthma symptoms (wheezing, coughing, chest tightness, shortness of breath) wake you up at night or earlier than usual in the morning?

- 1 4 or more nights per week
- 2 2-3 times per week
- 3 Once a week
- 3 Once or twice
- 5 Not at all

YOUR SCORE =

QUESTION 4: During the past 4 weeks, how often have you used your reliever inhaler (usually blue)?

- 1 3 or more per day
- 2 1-2 times day
- 3 2-3 times a week
- 4 Once a week or less
- 5 Not at all

YOUR SCORE =

QUESTION 5: How would you rate your asthma control during the past 4 weeks?

- 1 Not Controlled at all
- 2 Poorly Controlled
- 3 Somewhat Controlled
- 4 Well Controlled
- 5 Completely Controlled

YOUR SCORE =

TOTAL SCORE =

Score 25: WELL DONE. Your asthma appears to be under control over the last 4 weeks. However, if you are experiencing any problems with your asthma you should see your doctor or nurse.

Score 20-24: ON TARGET. Your asthma appears to have been reasonably controlled during the past 4 weeks. However, if you are experiencing any problems with your asthma you should see your doctor or nurse.

<NHS number>

2

Score Less than 20: OFF TARGET. Your asthma may NOT HAVE BEEN CONTROLLED during the past 4 weeks. PLEASE CONSULT YOUR DOCTOR OR NURSE

South Bank Breast Service Referral Form

GUIDELINES FOR REFERRALS TO THE BREAST CLINIC¹

This has been changed to facilitate differentiation between 2 week wait patients (i.e. a high risk of breast cancer), and routine referrals as is now defined by the Government.

2 WEEK WAIT

- Clinically suspicious new or discrete lump in woman over 30 years of age
- Recent nipple inversion or eczema
- Skin tethering and / or fixation
- Peau d'orange
- Suspicious skin ulceration
- Unilateral blood-stained nipple discharge (any age)
- ■■■■ aged 50 years and older with a unilateral, firm **suspicious** subareolar mass

ROUTINE REFERRAL

- Discrete lump in a woman under 30 years of age
- Unilateral persistent pain in postmenopausal women
- Intractable breast pain and not responding to reassurance, an appropriate bra and simple analgesics
- Nipple discharge; - All women aged 50 years and above with any new nipple discharge. Persistent bilateral discharge sufficient to stain clothes in patients under 50

Referral is not usually required for:-

- *Pain in women under 35 years of age who have a low risk of underlying pathology*
- *Women on HRT who often develop cyclical breast pain*

Management of Family History

Risk should be assessed utilising the recently published NICE CG41 Familial breast cancer (25 October 2006). Copies are available from <http://guidance.nice.org.uk/cg41/quickrefguide/pdf/English>. Patients thought to be at moderate / high risk should be referred for assessment and possible screening.

NOTE:- Mammography in isolation is no longer considered acceptable practice and patients requiring further assessment now require full triple assessment in the clinic.

¹ Guideline developed in line with national guidance including NICE - Improving Outcomes in Breast Cancer (2002) National Cancer Guidelines, National Cancer Plan and also reflects local provision and referral frameworks.

****HAND TO PATIENT****

Urgent Hospital Appointments (within 2 weeks)

Why have you been referred to hospital to be seen within 2 weeks?

This 'two week' urgent referral system aims to diagnose and treat serious illnesses, including cancer, quickly. You will be seen by a hospital specialist within the next 14 days.

It is important to find out what is causing your current symptoms and further specialist advice and possible investigations are now needed. Most conditions are more likely to be cured if they are diagnosed and treated early.

Does this mean you have cancer?

The majority of patients referred under this system have a simple or benign condition and do not have cancer.

What will happen next?

The hospital will contact you (probably by telephone) to arrange an appointment or some tests. **Please make sure that your surgery has your correct contact details, including home and mobile telephone numbers.**

Appointments

It is very important that you attend your appointment so please do all you can to be available for the date the hospital gives you. Tell your GP if you are going to be away or too busy with work or other commitments to attend an appointment in the next 2 weeks.

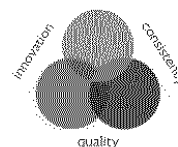

You are welcome to bring someone with you for support.

If you are unable to attend an appointment please let the hospital know so that another patient can be offered that appointment. You will be offered a different date or time.

If you have not heard from the hospital within 7 days please contact your surgery.

The hospital specialist that you see will be happy to answer any questions that you have about the tests or treatment that you may need.

Delivering joined up solutions

South Bank Breast Service Referral Form**GUIDELINES FOR REFERRALS TO THE BREAST CLINIC¹**

This has been changed to facilitate differentiation between 2 week wait patients (i.e. a high risk of breast cancer), and routine referrals as is now defined by the Government.

2 WEEK WAIT

- Clinically suspicious new or discrete lump in woman over 30 years of age
- Recent nipple inversion or eczema
- Skin tethering and / or fixation
- Peau d'orange
- Suspicious skin ulceration
- Unilateral blood-stained nipple discharge (any age)
- ■■■■ aged 50 years and older with a unilateral, firm **suspicious** subareolar mass

ROUTINE REFERRAL

- Discrete lump in a woman under 30 years of age
- Unilateral persistent pain in postmenopausal women
- Intractable breast pain and not responding to reassurance, an appropriate bra and simple analgesics
- Nipple discharge; - All women aged 50 years and above with any new nipple discharge. Persistent bilateral discharge sufficient to stain clothes in patients under 50

Referral is not usually required for:-

- *Pain in women under 35 years of age who have a low risk of underlying pathology*
- *Women on HRT who often develop cyclical breast pain*

Management of Family History

Risk should be assessed utilising the recently published NICE CG41 Familial breast cancer (25 October 2006). Copies are available from <http://guidance.nice.org.uk/cg41/quickrefguide/pdf/English>. Patients thought to be at moderate / high risk should be referred for assessment and possible screening.

NOTE:- Mammography in isolation is no longer considered acceptable practice and patients requiring further assessment now require full triple assessment in the clinic.

¹ Guideline developed in line with national guidance including NICE - Improving Outcomes in Breast Cancer (2002) National Cancer Guidelines, National Cancer Plan and also reflects local provision and referral frameworks.

****HAND TO PATIENT****

Urgent Hospital Appointments (within 2 weeks)

Why have you been referred to hospital to be seen within 2 weeks?

This 'two week' urgent referral system aims to diagnose and treat serious illnesses, including cancer, quickly. You will be seen by a hospital specialist within the next 14 days.

It is important to find out what is causing your current symptoms and further specialist advice and possible investigations are now needed. Most conditions are more likely to be cured if they are diagnosed and treated early.

Does this mean you have cancer?

The majority of patients referred under this system have a simple or benign condition and do not have cancer.

What will happen next?

The hospital will contact you (probably by telephone) to arrange an appointment or some tests. **Please make sure that your surgery has your correct contact details, including home and mobile telephone numbers.**

Appointments

It is very important that you attend your appointment so please do all you can to be available for the date the hospital gives you. Tell your GP if you are going to be away or too busy with work or other commitments to attend an appointment in the next 2 weeks.

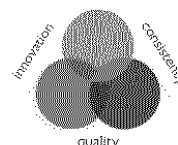

You are welcome to bring someone with you for support.

If you are unable to attend an appointment please let the hospital know so that another patient can be offered that appointment. You will be offered a different date or time.

If you have not heard from the hospital within 7 days please contact your surgery.

The hospital specialist that you see will be happy to answer any questions that you have about the tests or treatment that you may need.

Delivering joined up solutions

Reason for Referral:

I am writing to you regarding 44 year old Nicola Burns. She came to my clinic today complaining of worsening vertigo symptoms associated with tinnitus and fullness of the ears. This has been an on-going problem for over a year, previously trying Betahistine, Cinnarazine and Prochlorperazine, all of which temporarily relieved her symptoms. The vertigo and tinnitus is now much more frequent, intense and associated with reduction of hearing in the right ear, nausea and vomiting. Today, on examination, I could not find any sources on infection. ENT examination was normal, Neurologically intact and recent blood tests have been normal as well.

I would be very grateful if you could see her in your clinic to discuss further options for her as her symptoms are greatly reducing her quality of life.

Kind regards

Dear Miss Burns

I am now in receipt of your blood test results, all remain stable. Your Cholesterol is 5.3 please ensure you are taking your Simvastatin as prescribed

Please continue to follow a low fat diet, take regular exercise and drink alcohol in moderation.

Your blood pressure was stable and would encourage you to have this checked every 4-6 months.

You will be sent another appointment in a years time.

Should you wish to discuss your results in detail, please do not hesitate to contact myself or my colleague.

Yours sincerely

Campling RGN

1 Aylesby House, Alden Close, DN40 2AQ

Attendance Date: 5-Jan-2015 18ww Pathway Status: 75 - excl
Referrer: MRS P BAGGA/ 130
Original Referral Date: 7-Mar-2014

I reviewed Nicola in clinic today. She essentially remains the same. I discussed her scans with my colleagues at the Hull Royal Infirmary and the scans were more typical of small vessel ischaemia. Given the fact that she is a heavy smoker she must reduce if not stop smoking altogether.

I repeated a scan today including internal acoustic meatus as she complains of dizzy spells suggestive of vertiginous episodes lasting for a few hours at a time. She also says she has occasional tinnitus. I think she would benefit from an opinion of an ENT specialist and I would be grateful if you could refer her appropriately. I also think she should be reviewed by the stroke team for a risk factor stratification and appropriate advice on secondary prophylaxis and I would be grateful if she could be referred to the stroke medicine as well. I will write back to you with the investigation reports. If you have any queries or concerns let me know.

Yours sincerely

Dear Miss Burns,

IMPORTANT - ASTHMA REVIEW

You are due for an asthma review. I would be grateful if you would contact your usual surgery to make an appointment to see the asthma nurse.

When you attend for your review it will normally last about 20 minutes and involves:-

- ~ asking you about the symptoms you are getting from asthma
- ~ checking your inhaler technique
- ~ advising you about monitoring your peak flow
- ~ organising a self management plan
- ~ any other issues related to asthma, e.g. flu vaccinations, medication, etc.

Please bring with you all of your inhalers and spacer devices to the surgery when you attend your clinic appointment.

We accept that it is not always possible to attend the surgery, if this is the case, please arrange a telephone review.

Alternatively if you feel your asthma is well controlled you may complete the enclosed Asthma Control Test and return it to the surgery for the attention of the Asthma Nurse. Please ensure we have your up to date daytime contact telephone number, just in case we need to contact you.

Yours Sincerely

DR. S.A. THRIPPLETON

Asthma Control Test (The Asthma Control Test™ is a trademark of QualityMetric Incorporated)

Nicola Burns 21 Apr 1972 Date Asthma control test

The Asthma Control Test™ below will provides us with a snapshot of how well your asthma has been controlled over the last four weeks. It gives a score out of 25. PLEASE RETURN THE FORM TO YOUR ASTHMA NURSE.

Step 1: ■■■■ each question below carefully, circle your score and write it in the box.

Step 2: Add up each of your five scores to get your total Asthma Control Test™ score.

Step 3: Use the score guide to learn how well you are controlling your asthma.

QUESTION 1: During the past 4 weeks, how often did your asthma prevent you from getting as much done at work, ■■■■ or home?

- 1 All of the time
- 2 Most of the time
- 3 Some of the time
- 4 A little of the time
- 5 None of the time YOUR SCORE =

QUESTION 2: During the past 4 weeks, how often have you had shortness of breath?

- 1 More than once per day
- 2 Once per day
- 3 3 to 6 times per week
- 4 1 to 2 times per week
- 5 Not at all YOUR SCORE =

QUESTION 3: During the past 4 weeks, how often did your asthma symptoms (wheezing, coughing, chest tightness, shortness of breath) wake you up at night or earlier than usual in the morning?

- 1 4 or more nights per week
- 2 2-3 times per week
- 3 Once a week
- 3 Once or twice
- 5 Not at all YOUR SCORE =

QUESTION 4: During the past 4 weeks, how often have you used your reliever inhaler (usually blue)?

- 1 3 or more per day
- 2 1-2 times day
- 3 2-3 times a week
- 4 Once a week or less
- 5 Not at all YOUR SCORE =

QUESTION 5: How would you rate your asthma control during the past 4 weeks?

- 1 Not Controlled at all
- 2 Poorly Controlled
- 3 Somewhat Controlled
- 4 Well Controlled
- 5 Completely Controlled YOUR SCORE =

TOTAL SCORE

Score 25: WELL DONE. Your asthma appears to be under control over the last 4 weeks. However, if you are experiencing any problems with your asthma you should see your doctor or nurse.

Score 20-24: ON TARGET. Your asthma appears to have been reasonably controlled during the past 4 weeks. However, if you are experiencing any problems with your asthma you should see your doctor or nurse.

Score Less than 20: OFF TARGET. Your asthma may NOT HAVE BEEN CONTROLLED during the past 4 weeks. PLEASE CONSULT YOUR DOCTOR OR NURSE

Exam Date: 18/02/2014 Examination(s): MRI Head, MRI Diffusion, MRI Orbit Both

Authorised

Authorised by: Dr [redacted]

MRI of brain and orbits.

Clinical history - 15-year history of headaches, constricted visual [redacted] both eyes, normal optic disc, no papilledema, normal colour vision. ? space occupying lesion ? demyelination.

Findings -

There are multiple bilateral deep white matter high signal foci which have a nonspecific and non-territorial distribution pattern.
No space occupying lesions, territorial ischaemia or intracranial bleed.

Taking the relatively [redacted] age and gender of this patient into consideration the appearances are suspicious for demyelination. The other differentials to consider would include vasculitis and premature chronic small vessel ischaemic changes.

Incidental note is made high signal in the left mastoid air cells raising the possibility of background mastoiditis.

Dear Miss Burns,

There is no need for concern but I would like you to be seen in surgery to have a repeat blood test in 8 weeks time.
Please pop into the surgery in a morning to the walk in Blood Clinic and then make an appointment to see a GP a few days later for the results.

Kind regards.

Yours sincerely,

Dr [REDACTED]

The Roxton Practice.

These are the details that we hold on file for you, please ensure that they are correct and if not contact the surgery and have them amended. Thank you.

Dear Miss Burns

IMPORTANT - ASTHMA REVIEW NOW DUE

Our records show that you are now due for an asthma review. I would be grateful if you would contact your usual surgery to make an appointment to see the asthma nurse.

When you attend for your review it will normally last about 20 minutes and involves:-

- asking you about the symptoms you are getting from asthma
- checking your inhaler technique
- advising you about monitoring your peak flow
- organising a self management plan
- any other issues related to asthma, e.g. flu vaccinations, medication, etc.

Please bring with you all of your inhalers and spacer devices to the surgery when you attend your clinic appointment.

If you already have an asthma clinic appointment please ignore this letter.

Yours Sincerely

DR. S.A. THRIPPLETON

South Bank Breast Service Referral Form

GUIDELINES FOR REFERRALS TO THE BREAST CLINIC¹

This has been changed to facilitate differentiation between 2 week wait patients (i.e. a high risk of breast cancer), and routine referrals as is now defined by the Government.

2 WEEK WAIT

- Clinically suspicious new or discrete lump in woman over 30 years of age
- Recent nipple inversion or eczema
- Skin tethering and / or fixation
- Peau d'orange
- Suspicious skin ulceration
- Unilateral blood-stained nipple discharge (any age)
- ■■■■ aged 50 years and older with a unilateral, firm **suspicious** subareolar mass

ROUTINE REFERRAL

- Discrete lump in a woman under 30 years of age
- Unilateral persistent pain in postmenopausal women
- Intractable breast pain and not responding to reassurance, an appropriate bra and simple analgesics
- Nipple discharge; - All women aged 50 years and above with any new nipple discharge. Persistent bilateral discharge sufficient to stain clothes in patients under 50

Referral is not usually required for:-

- Pain in women under 35 years of age who have a low risk of underlying pathology
- Women on HRT who often develop cyclical breast pain

Management of Family History

Risk should be assessed utilising the recently published NICE CG41 Familial breast cancer (25 October 2006). Copies are available from <http://guidance.nice.org.uk/cg41/quickrefguide/pdf/English>. Patients thought to be at moderate / high risk should be referred for assessment and possible screening.

NOTE:- Mammography in isolation is no longer considered acceptable practice and patients requiring further assessment now require full triple assessment in the clinic.

¹ Guideline developed in line with national guidance including NICE - Improving Outcomes in Breast Cancer (2002) National Cancer Guidelines, National Cancer Plan and also reflects local provision and referral frameworks.

Primary Care Trust

Date: 31/03/06

Dear Dr Timppleton

This is to inform you that your patient NI [redacted] Burns, 29 Bafford St
Linningham, DN4 0 1AZ D.O.B. 21/04/72

presented at the [redacted] Princess of Wales Hospital, Grimsby on
following an incident of self-harm/suicidal expression.

The circumstances of this episode were Nicola attended A+E on
30/03/06 at 21:39 have made cuts to her
wrists which required sutures. Nicola left
the dept. before seeing the crisis team

He/she was not seen by the Crisis Home Treatment Team due to discharging
themselves from the hospital prior to being seen.

We have written to the patient advising them of the following options for follow-up
care:

- ☒ To contact the Crisis Home Treatment Team within 2 weeks to arrange an
appointment, after this if no contact has been received they will be discharged
from the Team.
- ☐ To contact yourself to request a referral to see the Primary Care [redacted] Health
Nurse at your practice.

If you wish to discuss this further then please do not hesitate to contact the Crisis
Home Treatment Team on the above number.

Yours sincerely

Community Practitioner
Crisis Home Treatment Team

PROTOCOL FROM 1.2.05

Faxed 15:30

Whilst the patient is sat with the GP an appointment should be telephoned for on **01472 362089** and offered to the patient and an explanation of whether they should fast or drink 2 pints of water prior to attendance given by the GP or nurse. Appointments are now at [REDACTED] unless told otherwise (thyroid, testes and transvaginal will be done at D.P.O.W.H. but still appointed via Dr. Collett's).

The form should then be faxed
to Dr. Collett's on **01472 251742**

Dear Miss N Burns

The Doctor has requested for you to attend a clinic to review your Asthma. An appointment has been made for you:

On **Monday 17th October**

At **3:30 pm**

Please bring your inhalers with you and also your device if you have one.

If this appointment is not convenient to you please telephone the surgery so that we can make another appointment.

Yours Sincerely

Practice Nurse
