Communication To Primary Care

Dear Doctor,

Ms Leonard was admitted to the SRTC for the above procedure, which was performed without complication. Ms Leonard is recovering well and has now been discharged home.

If you have any queries regarding the procedure, please do not hesitate to get in touch.

kind regards

Mrs Kerry Low (Position: Non-Medical Prescriber. Pager: _____)

Date/Time Signed Off: 08/10/2020 13:11:08

User Guidance Notes

To be used in conjunction with a valid Pre-Assessment Document and Core Data Set and all other applicable supporting assessment & recording documentation as applicable.

This Document has been developed for use on **ALL** patients admitted to the Surgical Unit, for procedures under General/Spinal Anaesthetic. It shall promote and demonstrate a collaborative, chronological Multidisciplinary Team Record of the care delivered during the patient's journey through the Stracathro Surgical Unit.

It will be supported by other assessment, observation and recording tools which are in use within NHS Tayside. The Senior Charge Nurse will be responsible for ensuring that all documentation will be completed in line with NHS Tayside's Policy for Records and Record Keeping for Nursing and Midwifery

Patient Theatre Ticket

for patient/carer use (for GA/Regional)

NHS Tayside

Date 8/10/20

To make your trip to theatre as safe and effective possible, we would be grateful if you could please complete the following information (if you have any problems with this, please ask your nurse/carer/friend for help)

What would you like to be called Stacey. (e.g. your first name/nickname)

Our intention is to provide high quality care and to support you through the journey to theatre. If there is anything we can help you with during your stay, or if you have any concerns you would like to discuss with the theatre team, please tell us in the space below.

If you would like a friend/relative to accompany you until you reach the anaesthetic room, please let us know

To make your trip to theatre safe, we need you to stop eating and drinking at the required times.

- **Please do not suck sweets/use chewing gum after your last drink (i.e. 2 hours before surgery)**

When did you last have food? Date 7/10/20 Time ~~8~~ 2000

When did you last have a drink? Date 7/10/20 Time 2000

Your anaesthetist might advise you to continue drinking depending on your expected time for theatre

PLEASE COMPLETE IF YOU HAVE BEEN ADMITTED TODAY FOR SURGERY, OR IF YOU HAVE SELF-MEDICATED ON THE WARD

Medication you have taken today, including inhalers or patches	Time	Medication you have been asked to stop taking	When stopped

Preparing you for theatre

Are you wearing contact lenses? Yes ☑ No ☐

Do you have any loose teeth/caps/ bridges or dentures? Yes ☐ No ☑

We would request that your underwear (including bras if appropriate) be worn for coming to theatre. Please remember your glasses / dressing gown / slippers.

You MUST remove all Jewellery / Piercings / Make up/ Nail varnish . Yes ☐ No ☑

Coming to theatre

You may bring the following items to theatre with you. Please tick to confirm if you have brought any of the following to theatre :

Spectacles ☐ Contact lenses ☑

Dentures ☐ Wedding band ☑ taped

Reading material ☐

Other personal items (please specify) Right wrist dermal implant.

FOR CLINICAL USE ONLY – MULTIDISCIPLINARY WARD TEAM

I have explained the procedure to the patient. In particular I have explained:

Intended Benefits:

Significant Risks:

Any extra procedures which may become necessary during the procedure:

Blood Transfusion ☐ **Other** (specify)

(The need and alternatives have been discussed with the patient)

I have also discussed what the procedure is likely to involve, the benefits and the significant risks of any available alternative (including no treatment), and any particular concerns of this patient. I have done this in terms that, in my judgement have been understood.

The following information leaflet(s) has been given

Has the patient ever been notified that they are at increased risk of CJD or vCJD for public health purposes?

No	☐	Proceed as normal
Unable to Respond	☐	Proceed as normal unless high risk tissue, e.g. Brain, Spinal Cord Posterior Eye and Quarantine instruments pending contact with infection control for further advice.
Yes	☐	Ask for further explanation. Quarantine instruments pending contact with infection control for further advice.

CONSENT FOR INVESTIGATIONS, TREATMENT OR OPERATION FORM

This page is to be completed by the patient/representative.

Please read this form carefully. If you have any further questions, do ask; we are here to help you. You have the right to change your mind at any time, including after you have signed this form.

I agree: To the procedure or course of treatment described on this form.

To the administration of a general, local or other anaesthetic as appropriate, following informed discussion including the benefits and significant risks with the anaesthetist.

I understand:

- That any procedure in addition to those described above will only be carried out if it is necessary to save my life or to prevent serious harm to my health.
- That you cannot give me a guarantee that a particular person will perform the procedure. The person will, however, have appropriate experience.
- Information including digital information (radiological e.g. x-rays, CT and MRI scans, video and/or photographic material) may be stored as part of the patients medical records and may be stored on computer databases.
- Body tissue e.g. fluids, organs or parts of them may be removed during the procedure and used for diagnosis, my future treatment and then discarded or stored as considered appropriate.

Please tick ✓appropriate box if you agree to

☐ Excess body tissue not required for diagnosis or future treatment being used for medical research (the University of Dundee is very active in medical research and donations of excess body tissues are a valuable resource for research)

☐ To photographs and other digital images being used for teaching, in presentations at conferences or available on websites and in publications

(If consent is withdrawn at a later date it may not be possible to withdraw images that are already in the public domain) NB Medical staff you must complete the appropriate medical photography forms.

I have been told about additional procedures as specified which may become necessary during my treatment. I have listed below any procedures which **I do not wish to be carried out** without further discussion.

Specified Additional Procedures | Additional Procedures I do not want carried out

n addition, after my elective treatment/procedure/surgery, I may need additional care that may equire me to go to an emergency department or a hospital.

understand that COVID-19 may cause additional risks, some or many of which may not currently be nown at this time, in addition to the risks described herein, as well as those risks for the eatment/procedure/surgery itself.

further understand that my treatment/procedure/surgery may be cancelled at short notice due to hexpected changes associated with the pandemic within NHS Tayside.

nave been given the option to discuss if I can defer my treatment/procedure/surgery to a later date. owever, I understand all the potential risks, including but not limited to the potential short-term and ng-term complications related to COVID-19, and I would like to proceed with my desired eatment/procedure/surgery.

Special Consent for Investigations, Treatment or Operation Form

COVID-19

Ward: Surgical Ward Stracathro

Consultant: Elliott

Specialty: Dental

I understand that I am opting for a treatment/procedure/surgery that I agree is necessary after discussion with

GILLIAN ELLIOTT. (Clinician name)

This is for the following procedure:

full dental clearance (Procedure name)

I also understand that the novel coronavirus, COVID-19, has been declared a worldwide pandemic by the World Health Organisation (WHO). I further understand that COVID-19 is extremely infectious and is believed to spread by person-to-person contact. As a result, the Scottish Government currently recommends social distancing. I understand that social distancing is not always possible while I am receiving hospital care.

I recognise that staff within NHS Tayside are closely monitoring this situation and have put in place reasonable preventative measures aimed to reduce the spread of COVID-19. However, given the nature of the virus, I understand there is still a risk of becoming infected with COVID-19 by proceeding with this treatment/procedure/surgery. I hereby acknowledge the risk of becoming infected with COVID-19 through this treatment/procedure/surgery.

I understand that even if I have been tested for COVID-19 and receive a negative test result, the tests in some cases may fail to detect the virus or I may have contracted COVID-19 after the test. I understand that if I have a COVID-19 infection, and even if I do not have any symptoms for the same, proceeding with this elective treatment/procedure/ surgery can lead to a higher chance of complication and death.

I understand that possible exposure to COVID-19 before/during/after my treatment/procedure/surgery may result in the following: a positive COVID-19 diagnosis, extended quarantine/self-isolation, additional tests, hospitalisation that may require medical therapy, Intensive Care treatment and possible need for intubation/ventilator support, short-term or long-term intubation, other potential complications, and the risk of death. Those with pre-existing health conditions appear to be at a greater risk of significant complication from COVID-19 infection, and I have discussed my risks with my clinician.

HOW TO USE THIS FORM

Surgical Clinic — Surgeon fills in section 1 → send form & notes to PAC → *Pre-Assess Clinic* — PAC staff complete PAC documents & section 2 on pt → *Pre-Assess Clinic* — form scanned PDF viewable in Clinical Portal → PDF emailed to WL Sec. → *Waiting List* — Secretary Lists Patient for surgery

CONSENT FOR INVESTIGATIONS, TREATMENT OR OPERATION FORM

(Please complete using block capitals & no abbreviations)

NHS Tayside

Patient's Surname	LEONARD.	**Hospital/Ward**	Ninewells.
Other Names	STACEY.	**Speciality**	Dental
CHI Number	2804880060.	**Consultant**	Ballantyne.

Patient Label can be used

Name of proposed procedure or course of treatment

XGA full clearance + denture fit F/F. immediate.

The site / side of surgery

I have explained the procedure to the patient. In particular I have explained:

Intended Benefits: - removal of painful, infected, cavies + unrestorable teeth.

Significant Risks: GA risks - pain. swelling - bruising - infection. - bleeding.

Any extra procedures which may become necessary during the procedure:

Blood Transfusion ☑ **Other** (specify)

(The need and alternatives have been discussed with the patient)

I have also discussed what the procedure is likely to involve, the benefits and the significant risks of any available alternative (including no treatment), and any particular concerns of this patient. I have done this in terms that, in my judgement have been understood.

The following information leaflet(s) has been given

LN0411.

Has the patient ever been notified that they are at increased risk of CJD or vCJD for public health purposes?

No	☑	Proceed as normal
Unable to Respond	☐	Proceed as normal unless high risk tissue, e.g. Brain, Spinal Cord Posterior Eye and Quarantine instruments pending contact with infection control for further advice.
Yes	☐	Ask for further explanation. Quarantine instruments pending contact with infection control for further advice.

Clinicians Signature:	C M Dun G Elliott SDO	**Date**	31st July 2020 8/10/20

CONSENT FOR INVESTIGATIONS, TREATMENT OR OPERATION FORM

This page is to be completed by the patient/representative.

Please read this form carefully. If you have any further questions, do ask; we are here to help you. You have the right to change your mind at any time, including after you have signed this form.

I agree: To the procedure or course of treatment described on this form.

To the administration of a general, local or other anaesthetic as appropriate, following informed discussion including the benefits and significant risks with the anaesthetist.

I understand:

- That any procedure in addition to those described above will only be carried out if it is necessary to save my life or to prevent serious harm to my health.
- That you cannot give me a guarantee that a particular person will perform the procedure. The person will, however, have appropriate experience.
- Information including digital information (radiological e.g. x-rays, CT and MRI scans, video and/or photographic material) may be stored as part of the patients medical records and may be stored on computer databases.
- Body tissue e.g. fluids, organs or parts of them may be removed during the procedure and used for diagnosis, my future treatment and then discarded or stored as considered appropriate.

Please tick ✓appropriate box if you agree to

☐ Excess body tissue not required for diagnosis or future treatment being used for medical research (the University of Dundee is very active in medical research and donations of excess body tissues are a valuable resource for research)

☐ To photographs and other digital images being used for teaching, in presentations at conferences or available on websites and in publications

(If consent is withdrawn at a later date it may not be possible to withdraw images that are already in the public domain) NB Medical staff you must complete the appropriate medical photography forms.

I have been told about additional procedures as specified which may become necessary during my treatment. I have listed below any procedures which **I do not wish to be carried out** without further discussion.

Specified Additional Procedures | Additional Procedures I do not want carried out

Patient's Signature: x Sleonard **Date:** x 31 July 2020.

Criteria for Nurse Led Discharge

1. Pain Score 0

Pain Score 1-2

Pain Score 3

Give simple Analgesia & Review in 1 Hour

2. There are no signs of nausea & vomiting (N&V)

Patient has N&V, Give prescribed Anti Emetic & Review in 1 hr

3. The patient does not have any complications post op/post procedure

Patient has post op/procedure complications - Take appropriate actions and Review in 1 hr

4. SEWS score within acceptable limits

Escalate as per SEWS and review as appropriate

5. The patient has passed urine (if appropriate)

Assess patient for risk of retention and preform bladder scan

ADMIT OVERNIGHT

6. The patient has all the appropriate discharge information and education.
TTOs if prescribed have been given and explained.
If applicable 24 hour post discharge contact arrangements in place

7. There is an escort home and carer support is available to offer help for 24 hours and not required to be present

Carer support is required to be present with patient at home for 24 hrs and there is none available

Patient is ready to be discharged

Dear Dr Rooney

Stacey Leonard, 2 Wards Road, Brechin, Angus, DD9 7AS DOB: 28/04/1988

The above named patient was reviewed in the gynaecology clinic in Arbroath. She is 31-years-old, para 4, who has mainly had right iliac fossa pain for more than a year. Her menstrual cycle is fairly regular but variable from being light to heavy. She has no symptoms of intermenstrual bleeding. Her smears have been regular and normal and a gynaecology laparoscopy in 2009 has been negative.

Abdominal, speculum and vaginal examination was entirely normal.

In view of the slightly raised previous CA125 I had repeated the CA125. After discussing with the patient I have made arrangements for her to have an MRI. I will aim to have a telephone consultation with the patient once I have the MRI report.

With kind regards.

Yours sincerely

Dear Dr Cranswick

Stacey Ellis, 17 Annat Road, Montrose, DD10 8EF DOB: 28/04/1988

This lady was seen in the surgical see and do local anaesthetic clinic at Stracathro Hospital today regarding a lump in her right axilla.

PROCEDURE: Under infiltration of 25 mgs of Levobupivacaine the small cyst was excised through a transverse elliptical incision. It was clearly a cyst and was discarded. The skin was sutured with subcuticular 3/0 Vicryl Rapide and Steristrips over it.

She has been advised to take Paracetamol tablets for pain relief.

HISTOLOGY: Nil.

SUTURE REMOVAL: Nil.

FOLLOW UP: No follow up arrangements have been made.

Yours sincerely

Dear Dr Cranswick

Stacey Ellis, 17 Annat Road, Montrose, DD10 8EF DOB: 28/04/1988

You referred this gentleman to our service with a lump in her right axilla. She was sent an appointment for our one stop see and do clinic at Stracathro Hospital but unfortunately, has not attended for this.

I am not sure of the reason for her non-attendance and a further appointment has not been arranged. If she still wishes to be seen in our clinic she can contact us within 4 weeks of the date of this letter and a further routine appointment can be arranged.

Yours sincerely

CLINICAL INFORMATION

History of presenting complaint / examination findings / investigation results

Presenting complaint

Description: lump right axilla

Comment: This 27 year old lady has been aware of a lump of her right axillae for several months. It is not changing and is non tender. On examination there is a very superficial lump measuring approximately 2cm in diameter with the skin mobile over it, it would appear to be a benign cyst. She has no significant skin lesions and no breast lumps. I think this is a simple benign cyst but she would like it to be removed. I would be very grateful if you would consider this. Thank you. Dr Ruth Cranswick GMC No., 3260678

Dear Dr Cranswick

Stacey Ellis, 17 Annat Road, Montrose, DD10 8EF DOB: 28/04/1988

Procedure: Loop excision of transformation zone.

Following a smear suspicious of invasive disease and a difficult examination in clinic this lady was taken to theatre today as planned for a diagnostic loop excision.

On examination she had a 1.5 cm exophytic lesion arising circumpherentially around the os. Whilst this could be a florid viral wart the appearances were certainly more inkeeping with malignancy. Clinically there was no vaginal or parametrial spread. We will liaise with the radiology department as to whether it is still appropriate to do her imaging next week and will see her once the pathology results are available.

Yours sincerely

Dear Dr Cranswick

Stacey Ellis, 17 Annat Road, Montrose, DD10 8EF DOB: 28/04/1988

The biopsy taken at Stacey's last clinic visit has shown only CIN III. It might be that the sample is not representative as Stacey found the examination quite painful and I was not able to do the loop biopsy which was my initial intention. In view of this I have spoken to Stacey over the phone, have given her the diagnosis and will bring her in to theatre on 16 August to carry out the loop biopsy under general anaesthesia.

Yours sincerely

Dear Dr Cranswick

Stacey Ellis, 17 Annat Road, Montrose, DD10 8EF DOB: 28/04/1988

Clinical impression – cervical cancer (? Stage 1B)

Many thanks for referring Stacey to the colposcopy clinic today. Her smear was suggestive of high grade dyskaryosis ? invasive.

On clinical examination there is a raised lesion on the cervix measuring about 2.2 cm in its maximum dimension. I was only able to do a punch biopsy today in view of the intense vaginal pain Stacey has (long history of vaginismus). I have also organised for a CT and MRI to be carried out. I will see her back in the clinic on 15 August to give her the final diagnosis.

I have explained to her my high suspicion of cervical cancer and hopefully the scan will give us further information about staging and treatment. Stacey was accompanied by her partner today and he was part of the consultation. I have also given her details of our clinical nurse specialist in case she requires support while we are awaiting the results.

Yours sincerely

Dear Dr Cranswick

Stacey Ellis, 17 Annat Road, Montrose, DD10 8EF DOB: 28/04/1988

Thank you for referring this twenty-eight year old para 4+0 for consideration of sterilisation.

Unfortunately NHS Tayside Protocol does not allow me to perform sterilisation in patients younger than thirty due to the high risk of regret. Stacey's main reason for wishing sterilisation is that she has finished her family and she has had trouble with other forms of contraception. She currently has a Nexplanon insitu and bleeds heavily with this. She has intermenstrual and post-coital bleeding. She is a smoker and has not had a smear in eight years. She has a low BMI. She has previously tried Depo-Provera and found that she developed a pain in her side every eight weeks. Although she has never tried the Mirena coil, she does not like the idea of a foreign body inside her uterus. Her pregnancies were essentially uncomplicated but she did have an anti-partum haemorrhage in one pregnancy and she informs me there were some concerns about her cervix at this time. I note she suffers from depression and is currently on Sertraline for this.

Stacey was understandably disappointed that I was unable to offer her sterilisation. However my concern was that her irregular bleeding may be due to an abnormality of her cervix rather than hormonal. After much persuasion she eventually allowed me to examine her cervix but she was only able to tolerate a quick look. The cervix was erythematous, probably represents an ectropion however I was not able to see whether the area was raised. There was some contact bleeding with the smear. A quick vaginal examination did not suggest any suspicious lesions.

I have suggested that she could add in the combined oral contraceptive pill for one month to see if this would upgrade her progesterone receptors and allow the Nexplanon to be more effective. She is aware that if the smear is abnormal she would need colposcopy. I have given her an Information

Dear Dr Chien

RE: STACEY ELLIS 8 MILL PLACE CRAIGO MONTROSE DD10 9LB 280488 0060

With reference to the above patient you referred to the Psychosexual clinic at Abbey Health Centre Arbroath, on 21.6.2010.

The patient failed to respond to a letter offering an appointment explaining that they had come to the top of the waiting list. Six weeks have passed and as we have not heard from Stacey ,we assume she is not requiring an appointment anymore and have removed them from our waiting list.

Many thanks

Yours sincerely

Dear Mr Morris

STACEY ELLIS 8 MILL PLACE CRAIGO MONTROSE DD10 9LB

Thank you for sending this young lady back to the clinic.

Her left eye is amblyopic and she is not really able to tolerate a contact lens in that side. She has been having frequent episodes where the sight seems to go on that side but on examining her today her optic discs look to be reasonably healthy if a little hypermetropic. In the absence of any serious findings probably we can accept this as normal for her but I would hope that her symptoms resolve at some point. She doesn't need a routine appointment to come back but I would happily see her again at your request if things are worsening.

Yours sincerely

Dr Graeme Sharpe

Patient history & details

Miss Ellis attended for a sight test giving a history of repeated episodes of blacking out of vision in the LE. These last for a few hours and have become more frequent over the last 6 mths. The LE is amblyopic and seems to "wander around" when checking OMB

Dr D Reed
Associate Specialist
Psychosexual Clinic
Abbey Health Clinic
Arbroath

Dear Dr Reed

STACEY ELLIS 8 MILL PLACE CRAIGO MONTROSE DD10 9LB

I would be grateful if you could see this above 22 year old para 1 + 1 for possible psychosexual counselling with her partner. She was first referred to me in June 2009 with vaginal bleeding and dyspareunia. It was difficult to examine her at the clinic because she was extremely tensed up and hence we undertook a diagnostic laparoscopy in September 2009. Her laparoscopy was completely normal and she was then discharged from any further follow-up.

She was then referred back to me recently and was seen at my clinic here in Montrose today, 21 June 2010 with superficial dyspareunia. All these symptoms post-dated her last delivery in 2008.

On examination the abdomen was soft and non-tender. There was no mass felt. On inspection of the vulva there were no lesions seen or any distortion of her vulval anatomy. Vaginal speculum examination was also entirely normal.

I wonder whether she has got vaginismus to account for her superficial dyspareunia. I would be grateful if you could assess her on this possibility. When she was seen at my clinic she also asked about the possibility of being sterilised. Given her young age I informed her I was not happy to sterilise her as there are other methods of reversible and reliable contraception available. I have not made any follow-up appointment for her in the meantime.

Kind regards.

Yours sincerely

Dr Patrick Chien
Consultant Obstetrician and Gynaecologist

CLINICAL INFORMATION

History of presenting complaint / examination findings / investigation results

Presenting complaint

Description: Dyspareunia

Comment: This 22 year old lady complains of dyspareunia since the birth of her son 2 years ago. She had a tear which required stitches. She examined herself and though she could feel a "hole" in her vagina. O/E-V/e-Tender at vaginal entrance, no other abnormality noted. She had a laparoscopy last year which was normal. I would be grateful for your opinion.

History of presenting complaint / examination findings / investigation results

Presenting complaint

Description: Request for sterilisation (Already been referred for dyspareunia on 29/04/10)

Comment: Dear Dr Chien, This 22 year old girl has already been referred to you by one of my GP colleagues regarding dyspareunia. Stacey is requesting sterilisation. She has a 2 year old son, Declan, who has had very considerable problems with failure to thrive. Declan recently had an adenotonsillectomy for sleep apnoea and is slowly gaining weight. Stacey and Declan have had extensive multi agency input to support them and for short periods Declan has been in foster care. I have known Stacey for 2 years and had frequent contact with her. She has been clear throughout this time that she never intended to be a mother and certainly wants no more children. She thinks she can make a good job of caring for Declan but rightly perceives that this would be severely compromised if she had another child to care for. Stacey's Mum had 4 children all of whom ended up in care and this is her reason for not wanting to have children herself. The other issue is that she has tried implanon but requested removal for persistent bleeding (despite adding in the COCP). She is currently on depoprovera but thinks this is causing her pelvic pain (as this also occurred on a previous occasion with depo) and she is not a reliable pill taker. In summary, despite her young age I would support her request for sterilisation. Yours sincerely Ruth Cranswick

Dear Dr Ireland

RE: STACEY ELLIS, 8 MILL PLACE, CRAIGO, MONTROSE, DD10 9LB
MPI: 28 04 88 0060

Your patient underwent diagnostic laparoscopy under a general anaesthetic uneventfully today.

During the procedure the pelvic cavity looked entirely normal, with no evidence of endometriosis or adhesions. The left ovary had what looked like a normal follicle.

All being well she will be able to go home later on today, with no routine follow-up plans.

Yours sincerely

Dear Dr Ireland

STACEY ELLIS 8 MILL PLACE CRAIGO MONTROSE DD10 9LB

I saw this 21 year old para 1 + 1 at my Gynae Out-patient Clinic today who is complaining of constant vaginal bleeding since her last delivery a year ago. The bleeding has settled within the last two weeks. Currently she has got Implanon in situ for contraception which was inserted about a year ago. Her last cervical smear in 2008 was negative. She also complained of some dyspareunia but I note that her ultrasound scan on 23 June 2009 on her pelvis and abdomen was normal. She was also keen to preserve her future fertility.

On examination the abdomen was soft and non-tender. There was no mass felt. It was impossible to perform a vaginal speculum examination or pelvic examination on her as she was extremely tearful with the tenderness just on even light touch to her vulva or vagina. Therefore, that information is completely uninformative.

I had a discussion with her and have advised her to leave the Implanon in situ and hopefully her periods will settle down without any further treatment required. There is no indication to undertake any endometrial biopsy on her given her age.

In relation to her dyspareunia, I have offered her a diagnostic laparoscopy. She is aware of the need for a general anaesthetic and possible injury to the bowel, bladder and pelvic blood vessels which may subsequently require laparotomy. She is keen to go through with this so I have put her name down on my waiting list for a day case diagnostic laparoscopy to be done in the near future.

Yours sincerely

Dr Patrick Chien
Consultant Obstetrician and Gynaecologist

CLINICAL INFORMATION

History of presenting complaint / examination findings / investigation results

Presenting complaint

Description: Dysfunctional uterine bleeding

Comment: This 21 year old lady complains of continual vaginal bleeding with only 3 breaks from bleeding in the last year. She had an Implanon inserted following the birth of her son one year ago. 14 weeks post partum she had an USS done at Ninewells on 15/09/08 when she was complaining of a swelling in the left iliac fossa. The Scan was normal. She came requesting a D&C today and I explained that this is only occasionally performed as Scans are very helpful nowadays.She is also unsure about continuing with Implanon. I would be grateful for your advice.

Dear Dr. Mulcahy,

Stacey Ellis, Mearns View, Church Road, Luthermuir.

Diagnosis: Acne Vulgaris

Management: Lymecycline 408 mgs daily
Topical Brevoxyl

I reviewed this girl in the Dermatology Clinic today. She stopped her Lymecycline about three weeks ago and feels the skin on her face has started to flare up again. Her back and chest were clear but she does have some papules and pustules on her cheeks and forehead and some old scarring from previous acne lesions on her cheeks. She is not keen on oral contraceptive but she is interested in Depo Provera and I have asked her to see you to discuss this. I have re-started her on Lymecycline today and arranged review in three months, by which time she should be on Depo Provera and we can see how the oral antibiotics are working. If they are not, we can consider Roaccutane therapy.

Yours sincerely,

Dr P D Mulcahy
Howe of the Mearns
Blackiemuir Avenue
Laurencekirk

Dear Dr Mulcahy,

Stacey Ellis, (28.04.88), Mearns View, Church Road, Luthermuir, AB30 1YS

I reviewed this girl in the Dermatology Clinic today. Thank you for your note regarding her medication. In fact, on Tetralysal 1 daily and topical Brevoxyl, her skin is quite good although a little dry, so I have suggested she washes with the Dermol lotion. She tells me that moisturisers make her skin too greasy but she does need some sort of emollient, so this might be a good compromise.

Review has been arranged for 4 months time.

Yours sincerely,

Mearnsview Church Road Luthermuir Laurencekirk
Home: 01674 840628 CHI: 2804880060

Problem: Acne

Thank you for your letter about this young lady. She declines to take Dianette as recommended by yourself as she is strongly against taking any form of contraceptive pill and states that contraception is not required at present. I have prescribed Tetralysal and Brevoxyl as you have suggested.
This letter is just for your information.

Yours sincerely

Dr K Box

Dear Dr. Mulcahy,

Stacey Leonard, Mearns View, Church Road, Luthermuir.

I reviewed Stacey in the Dermatology Clinic today. She tells me that unfortunately the Differin was too irritating and that she had to stop this. The Lymecycline is helping to the extent that some of the inflammatory lesions are improving but she still has comedonal acne on her cheeks and forehead. Her affect seemed rather flat to me today and I note that she has a past history of depression, previously treated with Fluoxetine. She tells me the Depo Provera caused nausea and in any case, as per Dr. Procee's previous letter, I would be grateful if she was prescribed Dianette for contraceptive purposes, if there are no contra-indications to this, as it is likely to be helpful for her acne.

I was concerned that she is not using any contraceptive at all at present, despite being in a relationship. She should continue on the Tetralysal one daily. Review has been arranged back in three months.

Yours sincerely,

Dear Dr. Mulcahy,

Stacey Leonard (Ellis), Mearns View, Church Road, Luthermuir.

Diagnosis: Acne Vulgaris – Face

Management: Lymecycline
Differin Cream
Dianette to be considered

Thank you for referring this eighteen year old young lady with facial acne to the Clinic. She describes this as being present for the past five years and I understand she has tried several different topical treatments as well as a three to four months course of Erythromycin and then Minocycline. She had a flare up two weeks ago but she has not been applying any topical treatment or taking any systemic treatment for the past year. There is a history of possible scalp psoriasis when she was aged ten years and a history of depression for which she was on Fluoxetine; she stopped this about two months ago. She is currently on monthly injections of Depo Provera as a contraceptive. I note her mother and brother suffer from acne and have received Roaccutane treatment which did help resolve the problem. She has no known allergies.

On examination of her face, there were wide spread comedones on the upper cheek and lower part of the face and chin. There were a few papules but no cysts. On the left cheek there were one or two areas of minimal scarring. Dr. Green and I explained to Stacey that Roaccutane would be the last option and we would like to try topical treatment in the first instance and some antibiotics. We recommended starting a course of Lymecycline once a day for at least three months and also prescribed Differin cream. She could use Dermol 500 as a soap substitute as well as a moisturiser.

I wonder if she could have some information regarding Dianette and perhaps change her contraceptive medication to this as Depo could make her skin worse. We will review her back in the Clinic in four months' time.

Yours sincerely,

CLINICAL INFORMATION

History of presenting complaint/examination findings/investigation results

I would be grateful if you could see Stacey who has been suffering from acne vulgaris on her face for quite a while. She has been on different treatments including Erythromycin and Minocycline but nothing really helps and she gets frequent flare-ups. Her mother and her brother also suffer from acne and they had treatment with Roaccutane.

Reason for referral (including expectation of referral outcome)

I wonder if you could assess Stacey to see if she needs Roaccutane treatment. Thank you very much.

Stacey Leonard (28/04/1988)

CLINICAL INFORMATION

History of presenting complaint/examination findings/investigation results

Stacy is referred because of persistent disfiguring acne. I understand that she has had up to 6 courses of antibiotics and numerous topical preparations without much improvement in her skin. She has comedonal and pustural acne on her face and a small amount on her back. I saw her today with her father who tells me that Stacy's mother also suffered from severe acne and I understand her older brother was treated with Roacutane. Stacy and her father are seeking this sort of this treatment as they feel that the antibiotics and topical preparations have made no difference. We have briefly discusses some of the side effects of Roacutane although she is reasonably well acquainted with this following her brother's treatment.

On reviewing her notes I note she was first prescribed Dalacin T back in 2002 and that she has had courses of Mincocyline, Erythromycin and Benzoyl Peroxide.

Reason for referral (including expectation of referral outcome)

She is referred therefore for your assessment and advice as how to proceed.

Dear Dr Mulcahy

STACEY LEONARD, MEARNS VIEW, CHURCH ROAD, LUTHERMUIR:

Thank you for referring this 13-year old child back to the clinic. As you know she has a longstanding convergent squint, for which she had surgery on both eyes in the form of bilateral medial rectus recessions in 1995. Stacey is not happy at continuing to wear spectacles, but these are in fact correcting both her vision and her squint. I doubt if she is ready to commence contact lens wear since she is reluctant to clean her spectacle lenses and will certainly come to grief if the adequate hygiene is not observed for handling contact lenses. She seemed disappointed that no further surgery has been offered, but this would almost certainly produce an over-correction and unbearable diplopia.

Kind regards

Yours sincerely

Dear Dr. Mulcahy

Stacey Leonard, Mearns View, Church Road, Luthermuir

Thank you for referring this 11 year old child whose Optometrist was unhappy with the level of acuity obtained at a sight test on the 6th of October 1999. Stacey had been attending Arbroath Infirmary under Dr MacEwen for many years and had surgery for a convergent squint in July 1995. This has enabled her to control the squint more readily. Her current glasses are probably slightly over corrected by half a dioptre and her vision can be improved to 6/9 right eye, 6/12 with the left. The left eye has always been partially amblyopic on looking through the old records.

She has been also complaining of some pain behind both eyes. This may be due to the presence of a few follicles in the lower conjunctiva associated with exposure to chlorinated swimming pool water where she attends about twice a month.

Yours sincerely,

Dr. J. A. Coleiro
Consultant Ophthalmologist.

Points requiring attention

Stacey came for her first test since being discharged from the hospital eye service.
Her visual acuity was quite poor in both eyes which is slightly unusual. I would be grateful if you could check her notes or contact the hospital eye service to check if this is similar to the level of acuity she was achieving at that time. Further referral would only be required if the current acuity is poorer than what was obtained previously.
I have advised her mother that she will be contacted if further investigation is required.

Abbey Health Centre,
East Abbey Street,
ARBROATH.

Dear Dr. Gray,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath.

I was asked to see Stacey by Dr. Forsyth. I am also aware that she has recently been reviewed by Dr. Thomson, Consultant Gynaecologist.

The concerns being over probable breast lump tissue together with a little bit of vaginal discharge. Otherwise her general health is excellent.

I note that she is under long-term foster care and was brought today by her foster mother Mrs. Irene Claffey.

On examination she has I think normal beginnings of a left breast bud with no evidence of this on the right. She has very fine early pubic hair development but otherwise no other signs of external abnormalities to the genitalia.

I think this is all very early development one that does not seem to worry Stacey or indeed Mrs. Claffey.

I do not feel there is any need for any investigations at the present time and I have reassured them.

Yours sincerely,

S. A. Greene,
Consultant Paediatric Endocrinologist.

Dear Steve,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath.

I would be most grateful if you could arrange to see Stacey at your Arbroath Clinic she was originally seen by Dr. Anne McGeechan who was standing in for me at my clinic where she presented with swelling of her left breast and a blood stained vaginal discharge. From the latter point of view she was referred to Dr. Margaret Thomson, Consultant Obstetrician/Gynaecologist and I reviewed Stacey back at my clinic today.

On examination of her breasts I felt that the swelling maybe due to early development of breast tissue. There is no evidence of any swelling affecting her right breast and she is otherwise prepubertal. I would be most grateful. If you could see Stacey and inform me if you feel further investigation is indicated or not.

Yours sincerely,

Dear Dr. Gray,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath

I saw Stacey at the clinic on the 20th of November. I am sorry that a letter was not dictated. Stacey's notes were removed for the Paediatric clinic so therefore it was not brought to my notice earlier.

She has a history of a PV discharge that tends to come and go and the swabs are negative.

In the absence of bleeding and discussing with Stacey whether she could have put anything inside, there is no indication for an EUA. If there is a foreign body inside then the dischage would be bloodstained. I suspect it is probably just a contamination issue and often with these youngsters, with the lack of oestrogen in the vagina, often can be more sensitive to normal commensals and contamination from bowels.

In order to try and help a bit I would suggest that Stacey gets to use some Ovestin cream and I underline Ovestin not Dienoestrol. I have explained to her foster mum about putting 1 ml. just at the vaginal orifice once a day for a couple of weeks and that will hopefully increase the stratification of the vaginal mucosal wall. It should not be used for longer than this.

I would expect her to grow out of it as she gets older anyway and it is really nothing to worry about.

Thanking you.

Yours sincerely,

M. A. R. Thomson

Dear Dr. McGeechan,

Re:- Stacey Leonard, 28/04/88 0060
c/o Irene Claffey,
49 Millfield Road,
Arbroath, DD11 4HW

You saw this 9 year old in July and again in September with a (L) breast lump and (L) cervical lymphodenopathy and a vaginal discharge. She is being seen by the gynaecologists this week with regard to the discharge. The breast lump has been fairly constant over the past 2 months and the neck glands have also been persistant.

Stacey herself seems perfectly well but due to the persistance of these problems I wondered if you were proposing to see her again fairly soon.

Yours sincerely,

M. Gray.

Dr. A. McGeechan,
Specialist Registrar to Dr. J.S. Forsyth,
ARBROATH INFIRMARY.

Dear Dr. McGeechan,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath.

Thank you for your note regarding this girl. I am quite happy to see her with a view to her vaginal discharge, but as Gynaecologists we have no expertise whatsoever in breast lumps. If you are worried about this I am the wrong person to refer her to. However, I will see her at the clinic with a view to her discharge and usually unless the discharge is blood-stained then there is no indication for doing an EUA to look for a foreign body. Usually there are normal commensals giving rise to the discharge and we tend to give them a little bit of oestrogen.

I will send her an appointment. If you want to do something further about the breast lump you might wish to speak to one of the breast people.

Yours sincerely,

M.A.R. Thomson,
Consultant Obstetrician/Gynaecologist.

Dr. M. Thomson,
Consultant Obstetrician and Gynaecologist,
Arbroath Infirmary,
ARBROATH.

Dear Dr. Thomson,

Stacey Leonard, co Irene Claffey, 49 Millfield Road, Arbroath.

I would be very grateful if you could see little Stacey in your Out Patient Clinic. I first saw her in July of this year and hopefully you will be able to read this letter with her casenotes. She is in foster care because of problems with sexual abuse in the past and she really seems very settled with her current foster carers.

The problem is that this 9 year girl has is that there is a left breast lump which varies in size, can be present some times and not there the next and Stacey complains of it intermittently being a bit tender, although there has never been any discharge from the nipple nor has there been any history of trauma.

The second problem is that from about April there has been an intermittent green/yellow vaginal discharge necessitating changes of underwear. A swab had been taken by the GP - no growth was detected, however Canesten and Timodine have been tried without any benefit.

When I saw her at the clinic on 10/09/97 the lump which I could not feel the previous time was certainly present, just under her left nipple and areola approximately a cm across, fluctuant and non tender and I wondered whether this was just an intermittent cystic swelling and I did not go on and do further perineal examination, previously it looked very normal - pink and healthy, vaginal opening looked normal and there was no discharge.

I am unsure as to where to proceed with her next and whether she necessitates an EUA. I certainly do not feel that there is any concern at present over abuse and it may that there has simply been a foreign body or something causing the vaginal problem.

cont'd.....

Dr. M. Gray,
Practice 3,
Abbey Health Centre,
East Abbey Street,
ARBROATH.

Dear Dr. Gray,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath.

Thank you for referring Stacey up to the Paediactric Clinic. I saw her this afternoon with her foster mother Irene Claffey.

Stacey is 9 years old and there were two problems with her, a left breast lump and a vaginal discharge. The breast lump was noted late March, it was a visible lump which was noticeable over the left breast first picked up when she was having a bath. Foster mum says this is no longer so visible but Stacey still complains of it being tender. No history of trauma was elicited.

The second problem again probably from about April has been of a green/yellow vaginal discharge. This has on occasions necessitated a change of pants, it has occasionally been itchy and smelly, I note that a swab taken from it had no growth detected. The discharge was also not helped by the use of Canesten or Timodine creams.

On the social side there is no contact with her natural dad and she has fairly erratic supervised access with the mother and step-father. The reason for her foster placement was because of sexual abuse in the past. She has been with these carers for the past 2 years. She otherwise is very healthy and going to go in to primary 5 at Inverbrothock Primary School after the holidays.

Examination was really quite unremarkable apart from the persisting cervical lymphadenopathy on the left side of her neck. No masses were palpable on either breast nor was there anything visible, although Stacy did complain of slight tenderness at the left breast but it was fairly variable in position. Abdominal examination was unremarkable. Her perineum looked very pink and healthy, there was no discharge from her vagina today and the vagina opening looked very healthy.

cont'd.....

I have arranged to see her back in 2 months' time and it may be that if the discharge is ongoing we will consider a gynaecological referral. There is no history of any foreign body. It may well be that the breast lump and the discharge are linked with hormonal changes in this as yet pre-pubertal child.

Yours sincerely,

Anne McGeechan,
Specialist Registrar to
Dr. J. S. Forsyth.

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below:

Thankyou for seeing Stacey again. About 5-6 weeks ago her father noticed some swelling of the L nipple area - that it was tender. At that time there was no lumps but now there is a definite slightly tender oval swelling under the nipple. No discharge, c/w/b clear. Comp is ~ 3/4" x 1/2"

No secondary sexual development

Also about 5-6 weeks ago she developed a yellowish green vaginal discharge which occasionally contains some blood stained mucus. Itch.

There is a history of physical abuse/neglect & a suspicion of sexual abuse in the past. Stacey has been with foster parents for several years but still has contact with her mother

Ovarian - Substance - mass may

Dear Dr. Hornsby,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath DD11 4HW.

Consultant:
C.J. MacEwen.

Diagnosis:
Hypermetropia.
Esotropia.
Left amblyopia.

Outcome:
Discharged from clinic.

Stacey has a fully accommodative esotropia in association with her hypermetropia. She has limited binocular function but she is now aged 8 and, therefore, should be fairly stable. In view of this I have discharged her from further follow-up and she will require to attend her Optician for regular refraction.

Yours sincerely,

C. MacEwen,
Consultant Ophthalmologist.

Dr A Hornsby,
Practice 3,
Abbey Health Centre,
ARBROATH.

Dear Dr Hornsby,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath

Stacey was seen at the Paediatric Clinic on the 1st of November 1995. She was referred to this clinic by Mr Davis, our Consultant ENT Surgeon, because of recurrent cervical lymphadenopathy. She was first noted to have enlarged cervical glands on the right side of her neck at the time when she had the infection. The size of the glands reduced with a course of antibiotics but have then increased in size again. Stacey is currently staying with Mrs Irene Claffey, her foster mother, and she said the the glands do tend to increase and decrease in size.

She had an audiogram last night which was reported to be normal. She also attends the Ophthalmology Clinic and you will be aware of the current social situation.

On examination, Stacey appeared well. She was pink. There were 3 smooth mobile cervical glands just anterior to the sternomastoid muscle on the left side. There was no significant lymphadenopathy on the right side of her neck and there was not axillary lymphadenopathy. On examination of the abdomen, there was no herpatosplenomegaly or significant inguinal gland. Ther throat was healthy.

It appears that these glands are normal and reactive glands and I therefore did not feel that investigation, in particular cervical excision biopsy, was indicated. I did express to Mrs Claffey that if any of the glands increased in size, remained enlarged and felt hard and fixed then of course we would want to see Stacey back at the clinic with a view to further investigation. In the meantime I have discharged her from this clinic.

Yours sincerely,

J. S. FORSYTH,
CONSULTANT PAEDIATRICIAN.

Dr. A. H. Hornsby,
Abbey Health Centre,
ARBROATH.

Dear Dr. Hornsby,

Stacy LAING, 9 Lamley Terrace, Arbroath.

You will recall that you referred Stacy to the Paediatric Clinic in November, 1989, because of concern regarding her development.

I agreed that there was mild delay in her development and wondered if it was partly related to her poor home circumstances. I did arrange to review her, but she failed to attend on 28th March and also today. I would therefore be most grateful if you, or your Health Visitor, could investigate this and inform me if you wish me to see her again at this clinic.

Yours sincerely,

J. S. FORSYTH
Consultant Paediatrician.

Dr. J. S. Forsyth. 1st November, 1989.

Dr. A. H. Hornsby,
Abbey Health Centre,
ARBROATH.

Dear Dr. Hornsby,

Stacy LAING, 9 Lawley Terrace, Arbroath.

Stacy was seen at the Paediatric Clinic on 1st November, 1989, having been referred at the age of 16 months because of concern regarding her development.

Prior to the consultation, I was given some background to the family by your Health Visitor.

Stacy is not yet walking unsupported, but is now walking with support. She crawls, but does not really weight-bear on her knees. In terms of her hand movements, she can use a spoon, but is still rather clumsy. She can say "Mummy" and "Daddy", but was not heard to utter any recognisable words at the clinic. She is feeding well and her height and weight continue along the third centile with her head circumference nearer the 50th centile. She has a 3-year-old brother and Mrs. Laing is expecting another baby in two weeks' time. I believe that the home circumstances are poor, the other member of the family living in the house being the maternal grandfather.

On examination, Stacy appeared well and reasonably well cared for. She was pink and satisfactorily nourished. She had a resolving nappy rash, but systematic examination was entirely normal, including neurological examination. She was able to walk with support, but, as mentioned, she did not utter any recognisable words.

She therefore does demonstrate some developmental delay and this may be related to the home circumstances. I would therefore support the idea of Stacy being seen regularly at the Family Centre where hopefully she will receive greater stimulation, and I will review her again at this clinic in four months' time to see if there has been any progress. I emphasised the need for this to Mrs. Laing and she appeared to be agreeable to these arrangements.

Yours sincerely,

J. S. FORSYTH
Consultant Paediatrician.

c.c. Dr. J. B. Morris.

CONSENT FOR INVESTIGATIONS, TREATMENT OR OPERATION FORM

This page is to be completed by the patient/representative.

Please read this form carefully. If you have any further questions, do ask; we are here to help you. You have the right to change your mind at any time, including after you have signed this form.

I agree: To the procedure or course of treatment described on this form.

To the administration of a general, local or other anaesthetic as appropriate, following informed discussion including the benefits and significant risks with the anaesthetist.

I understand:

- That any procedure in addition to those described above will only be carried out if it is necessary to save my life or to prevent serious harm to my health.
- That you cannot give me a guarantee that a particular person will perform the procedure. The person will, however, have appropriate experience.
- Information including digital information (radiological e.g. x-rays, CT and MRI scans, video and/or photographic material) may be stored as part of the patients medical records and may be stored on computer databases.
- Body tissue e.g. fluids, organs or parts of them may be removed during the procedure and used for diagnosis, my future treatment and then discarded or stored as considered appropriate.

Please tick ✓appropriate box if you agree to

☐ Excess body tissue not required for diagnosis or future treatment being used for medical research (the University of Dundee is very active in medical research and donations of excess body tissues are a valuable resource for research)

☐ To photographs and other digital images being used for teaching, in presentations at conferences or available on websites and in publications

(If consent is withdrawn at a later date it may not be possible to withdraw images that are already in the public domain) NB Medical staff you must complete the appropriate medical photography forms.

I have been told about additional procedures as specified which may become necessary during my treatment. I have listed below any procedures which **I do not wish to be carried out** without further discussion.

Practice 3,
Abbey Health Centre,
ARBROATH.

Dear Dr. Hornsby,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath.

Stacey attended for refraction. New glasses were ordered for constant wear. She is still considerably hypermetropic. Squint remains well controlled and we will keep her under review in the Orthoptic Clinic.

Yours sincerely,

E. Houghton,
Associate Specialist in Ophthalmology.

ARBROATH.

Dear Dr. Hornsby,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath.

I saw Stacey in the clinic today. She has had a reasonable result so far from her squint surgery and we will check her formally in the Orthoptic Clinic at the next visit. In the meantime she can use her Predsol N drops twice daily over the next week and then stop them.

Yours sincerely,

G. Sharp,
for Dr. C. MacEwen.

14th June 1995

Dear Mrs McConnachie,

Stacey Leonard

You did not bring Stacey along for squint surgery on 5.6.95 as had been organised, because the appropriate consent for surgery aparently had not been obtained. I discussed this with you in the out-patient clinic and obviously it is important that consent is obtained and surgery is carried out reasonably soon in order to improve Stacey's problem. I have relisted Stacey for 18.7.95 as a day case for squint surgery, and would be grateful if you could make the appropriate arrangements to have consent arranged for that date.

Yours sincerely,

C.J. MacEwen
Consultant Ophthalmologist

ARBROATH

14th June 1995

Dear Dr. Hornsby,

Stacey Leonard, 9 Lamley Terrace, Arbroath

Stacey was due for admission for squint surgery on 5.6.95. Unfortunately the day before surgery her foster parents called to indicate that this had not been cleared with the social work department and no consent had been given for surgery. She therefore was not brought along for the operation. I am not entirely clear why this had not previously been approved, as I discussed it with Mrs McConnachie in the out-patient department. I given her a new date for surgery for Tuesday the 18th of July and have written to her step mother again to ensure that she obtains consent from the appropriate authorities on this occasion.

Yours sincerely,

C.J. MacEwen
Consultant Ophthalmologist

Dear Dr. Hornsby,

Stacey Leonard, c/o Mrs. A. McConnachie, Braeminzion, Glenclova, Kirriemuir.

I reviewed Stacey today at the Eye Clinic. She continues to squint despite new glasses and I therefore have arranged for her to come in for squint surgery as a day case at the beginning of June.

Yours sincerely,

C. MacEwen,
Consultant Ophthalmologist.
(Dictated but not read.)

Abbey Health Centre,
ARBROATH.

Dear Dr. Hornsby,

Stacey Leonard, 9 Lamley Terrace, Arbroath DD11 5AD.

Unfortunately, Stacey has not been brought back to the Eye Clinic for approximately nine months, but she did return today, with evidence of her squint decompensating quite markedly for close-up. I re-refracted her and gave her a prescription for new glasses today and we will review her in a month's time.

She is currently with a short-term foster mother but will return to her more permanent foster parents at the end of the week. I have emphasised to them that she really must come back in the near future because surgery is now a distinct possibility.

Yours sincerely,

C. MacEwen,
Consultant Ophthalmologist.

Dr C McEwan
Consultant Ophthalmologist
Ophthalmology Clinic
Arbroath Infirmary
ARBROATH

Dear Dr McEwan

re: Stacey Leonard, 28.04.88. 9 Lamley Terrace, Arbroath

The above child has defaulted many appointments at your clinic.

I saw Stacey along with her mother on 13.01.94 for her Primary 1 medical.

She continues to have an obvious convergent squint. Her uncorrected vision is 6/9p 6/18p, corrected 6/9 6/12p. As she obviously requires review I would be grateful if you could arrange a further appointment. Could you also possibly give details of the appointment to myself at the above address and I will endeavour to see that Stacey's mum brings her along.

Many thanks.

Yours sincerely

Dr E Cockburn
Clinical Medical Officer

Dr. A.H. Hornsby,
Abbey Health Centre,
ARBROATH.

Dear Dr. Hornsby,

Stacey Leonard, 9 Lamley Terrace, Arbroath DD11 5AD.

I reviewed Stacey today at the Eye Clinic. She has a left convergent squint but is showing evidence of binocular function with her spectacles on. I have increased the strength of her glasses today and will review her in six weeks' time. She should continue to patch her right eye.

Yours sincerely,

C. MacEwen,
Consultant Ophthalmologist.
(Dictated but not read.)

MH/RCD/280488/0060.

Dr. M. Halliwell.

Dr. J. Nolan,
C.M.O.,
Abbey Health Centre,
ARBROATH.

Dictated 26.2.92.
Typed 2.3.92.

Dear Dr. Nolan,

Stacey Leonard, 9 Lamley Terrace, Arbroath.

Thank you very much for referring this pleasant young girl to the Ophthalmic Clinic today.

On examination today she has a constant left esotropia with an A pattern. Visual acuity is 2/5 and equal in both eyes and although she has a left constant squint she takes up the fixation with the left eye fairly readily. Extraocular movements were full. Retinoscopy showed that she was hypermetropic to a similar degree in both eyes and I have consequently prescribed for her an appropriate spectacle correction.

We will review her in six weeks' time to see to what degree these glasses help her squint.

Yours sincerely,

M. Halliwell,
(Dictated but not read.)

10 December 1991

Dr. Haining
Eye Clinic
The Infirmary
Arbroath

Dear Doctor,

Stacey LEONARD (28.04.88) 9 Lamley Terrace, Arbroath

I would be grateful for your opinion on this little girl's vision and eyes.

Stacey, I believe, has a squint and managed 6/12 6/12 with Kay picture test. There is a degree of delay in her development and your assistance with her eyes/vision would be appreciated.

Stacey's family circumstances are very poor and clinic attendance is generally erratic. It may be helpful if the appointment date and time were notified to Mrs. D. Wood, Health Visitor, Abbey Health Centre, Arbroath as well as to Stacey's Mum.

Thanking you
Yours sincerely,

Johanna Nolan

Dear Dr Clerihew

Re: STACEY ELLIS 28.04.88 0060
8 MILL PLACE, CRAIGO, MONTROSE, DD10 9LB

Following my colleague Dr Cranswicks letter to you, Stacey actually came back to see me after her recent hospital admission. Stacey was quite insightful about her eating disorder and recognizes that this is impacting on her ability to feed Declan. She finds feeding him extremely stressful and recognizes that meal times are unlikely to be a pleasant experience for Declan. She believes it is becoming less of a problem as he has increasing ability to feed himself. I am in no doubt that Declans failure to thrive is in a sense an extension of mums psychopathology. Stacey has agreed to my referring her to the Clinical Psychologist. I have gone ahead and made a referral and we will see whether Stacey keeps the appointment. Social Services are aware of the situation and closely involved.

With best wishes

Yours sincerely

Dr Graham Kramer

Dear Dr Clerihew

Re: DECLAN ELLIS, DATE OF BIRTH (05.06.2008) 5058
STACEY ELLIS, DATE OF BIRTH (28.04.88) 0060
8 MILL PLACE, CRAIGO, BY MONTROSE, DD10 9LB

Thank you for your letter following Declan's admission to hospital in August with failure to thrive.

Apparently during admission Stacey did express some concerns around her own issues with food, and we were therefore asked to follow this up. Stacey has been admitted acutely to the Gynaecology Ward today with right iliac fossa pain and vomiting. Once she has recovered I will discuss things with her and see if she is willing to engage with a Psychologist. I do suspect that she is not ready for this at present, but will nevertheless explore the issue with her.

This letter is simply for information. I am sorry that I cannot attend the network meeting this Friday but Sandra Stephen will keep me informed.

With best wishes.

Yours sincerely

RCranswick

Dr Ruth Cranswick

Dr. A. McGeechan,
Specialist Registrar to Dr. J.S. Forsyth,
ARBROATH INFIRMARY.

Dear Dr. McGeechan,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath.

Thank you for your note regarding this girl. I am quite happy to see her with a view to her vaginal discharge, but as Gynaecologists we have no expertise whatsoever in breast lumps. If you are worried about this I am the wrong person to refer her to. However, I will see her at the clinic with a view to her discharge and usually unless the discharge is blood-stained then there is no indication for doing an EUA to look for a foreign body. Usually there are normal commensals giving rise to the discharge and we tend to give them a little bit of oestrogen.

I will send her an appointment. If you want to do something further about the breast lump you might wish to speak to one of the breast people.

Yours sincerely,

File.

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below:

Thankyou for seeing this little girl at your clinic fairly quickly. She had grommets put in some time ago & should have been following up at your clinic. However, due to poor social circumstances, appointments were not kept. She is now in long term care so these should be less problems with attendance.

She is having problems with her ears again and was brought along end of Sept. with an acute otitis media. She has had a large rubbery gland @ neck R side present for a week or so. Initially this seemed to settle & the gland returned to a little in size but then returned. It is a 3/4" x 1/4" mobile rubbery, non tender lymphadenopathy enlargement. There is bilateral effusions but no inflammation / thickening. Any advice with regard to management would be greatly appreciated.

Diagnosis/provisional diagnosis: Large gland in R neck ?cause

Present drug treatment and potential special hazards: —

X-ray (women of childbearing age). Date of first day of L.M.P.

ARBROATH INFIRMARY.

Dear Dr Forsyth,

Stacey Leonard, c/o Irene Claffey, 49 Hillfield Road, Arbroath

I would be very grateful if you would be willing to see this young lady in order to put her mother's mind at rest in respect of her left posterior triangle lymphadenopathy which I am sure is reactive due to a viral infection. The ENT picture is recorded in the notes.

Thank you for seeing her.

Yours sincerely,

B. C. DAVIS,
CONSULTANT E.N.T. SURGEON.

Dr A Hornsby,
Practice 3,
Abbey Health Centre,
ARBROATH.

Dear Dr Hornsby,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath

This girl appeared at the clinic today.

I understand she had been referred by you but unfortunately the referral letter was nowhere to be found.

Mother tells me that Stacey, a little while ago, had a general viral illness with associated left posterior triangle lymphadenopathy. The viral illness has settled but the lymphadenopathy keeps recurring.

My understanding of my involvement in the consultation was the question as to whether or not there was an ENT cause for the above symptoms.

Palpation of the neck certainly reveals a small mobile left posterior triangle lymph node on the lower neck but nothing else of note. She had bilateral secretory otitis media. Given her multiple failures to attend in this respect in the past, I haven't pursued this.

Her throat was healthy.

I am happy that the situation is one of reactive lymphadenopathy but I think her mother would be happier with a paediatric opinion and I shall ask Dr Stewart Forsyth if he will kindly see her.

Yours sincerely,

B. C. DAVIS,
CONSULTANT E.N.T. SURGEON.

Dear Mr Davis

re: Brian 20.05.86
Stacey 28.04.88
Tammy Leonard, 9 Lamley Terrace, Arbroath DOB 01.12.89

The above children have defaulted from your clinic on a number of occassions. I referred Brian on 30.12.93 but the other two children have now come to my attention.

I would be grateful if you could see all three children together and also if you could could inform me at Ravenswood of the date, I will endeavor to see that they attend.

I saw Stacey in school on 13.01.94. Her PTA on 20.09.93 was normal. She however, has had a further ear infection and on examination has a left healing perforation and fluid behind the right drum.

Tammy had grommets inserted in November 1992 and failed to attend for follow up in March 1993.

Many thanks.

Yours sincerely

ARBROATH.

Dear Dr. Hornsby,

Stacey Leonard, 9 Lamley Terrace, Arbroath DD11 5AD.

Stacey, who is known to be a poor attender, has unfortunately failed to keep a number of appointments at the Eye Clinic. When last seen she was showing evidence of binocular function wearing her glasses, and, therefore, the hope is that she may, in fact, get a functional result. It is fairly important from her point of view that we do, therefore, try to see her again.

I haven't sent her a further appointment at present but would be most grateful if you could encourage her mother to bring her back to the clinic.

Yours sincerely,

C. MacEwen,
Consultant Ophthalmologist.
(Dictated but not read.)

Miss J. M. Heaton.

16th June, 1992.

Dr. A. H. Hornsby,
Abbey Health Centre,
ARBROATH.

Dear Dr. Hornsby,

STACEY LEONARD, 9 LAMLEY TERRACE, ARBROAT

This 4-year-old attended the E.N.T. Clinic today with her grandfather who didn't know much about her, but thought that she was all right as far as he new. It is now four months since her grommets were inserted.

On examination, both grommets were in situ and patent today. Unfortunately, she would not co-operate for an audiogram.

I have arranged a review appointment in six months.

Yours sincerely,

J. M. HEATON
E.N.T. Registrar
(dictated but not read).

c.c. Community Child Health.

SH/MSA/280488/0060

Mr. S. Hampel.

31st December, 1991.

Dr. J. A. C. Nolan,
C.M.O.,
Abbey Health Centre,
ARBROATH.

Dear Dr. Nolan,

Stacey LEONARD, 9 Lamley Terrace, Arbroath.

Thank you for referring this young child whom I saw in the E.N.T. Clinic today.

Mother gives an 10-month history of recurrent episodes of ear infections associated with high temperatures and hearing loss.

On examination, she does indeed have bilateral effusion in the middle ear. Her left appears to be resolving as there is evidence of air bubbles. The audiogram shows rather poor hearing thresholds in both ears.

In view of the recurrent ear infections and evidence of secretory otitis media and poor hearing thresholds, I have added her name to the waiting list (soon) for insertion of grommets as a Day Case.

Yours sincerely,

S. HAMPEL
E.N.T. Registrar
(dictated but not read).

c.c. Dr. A. H. Hornsby
Comm. Child Health.

Mr. Davis
ENT Consultant
The Infirmary
Arbroath

Dear Mr. Davis,

New. 0260 — New. 0261

Stacey LEONARD (28.04.88) **Tammy LEONARD (01.12.89)**
9 Lamley Terrace, Arbroath

I would be grateful for your opinion on these two sisters.

STACEY (3 years 7 months) has language and mild generalized developmental delay. She has a history of recurring ear/upper respiratory tract infections. Her hearing today is down and both drums are inflamed. I have arranged for her to be seen by Dr. Gray, GP, tomorrow.

TAMMY (2 years) development also slow but speech and language particularly so. No history of infections or sore ear apparently but very thick, dull whitish drums. Hearing - not possible to assess.

Social circumstances poor - clinic attendance generally erratic. (Older brother Brian has had gromets in and is due/overdue review).

Speech Therapy not yet in place but being worked towards!

Thank you for your help
Yours sincerely,

Johanna Nolan
C.M.O.

c.c. to G.P. Dr. Hornsby

Appt. has been arranged for 31.12.'91 from 11^00 am.

Brian missed appts. after July '91. Hopefully he will attend to.

Dear Dr Ireland

STACEY ELLIS 8 MILL PLACE CRAIGO MONTROSE DD10 9LB

I saw this 21 year old para 1 + 1 at my Gynae Out-patient Clinic today who is complaining of constant vaginal bleeding since her last delivery a year ago. The bleeding has settled within the last two weeks. Currently she has got Implanon in situ for contraception which was inserted about a year ago. Her last cervical smear in 2008 was negative. She also complained of some dyspareunia but I note that her ultrasound scan on 23 June 2009 on her pelvis and abdomen was normal. She was also keen to preserve her future fertility.

On examination the abdomen was soft and non-tender. There was no mass felt. It was impossible to perform a vaginal speculum examination or pelvic examination on her as she was extremely tearful with the tenderness just on even light touch to her vulva or vagina. Therefore, that information is completely uninformative.

I had a discussion with her and have advised her to leave the Implanon in situ and hopefully her periods will settle down without any further treatment required. There is no indication to undertake any endometrial biopsy on her given her age.

In relation to her dyspareunia, I have offered her a diagnostic laparoscopy. She is aware of the need for a general anaesthetic and possible injury to the bowel, bladder and pelvic blood vessels which may subsequently require laparotomy. She is keen to go through with this so I have put her name down on my waiting list for a day case diagnostic laparoscopy to be done in the near future.

Yours sincerely

Dr Patrick Chien

Dear Dr Forsyth,

Stacey Leonard, c/o Irene Claffey, 49 Millfield Road, Arbroath

I would be very grateful if you would be willing to see this young lady in order to put her mother's mind at rest in respect of her left posterior triangle lymphadenopathy which I am sure is reactive due to a viral infection. The ENT picture is recorded in the notes.

Thank you for seeing her.

Yours sincerely,

Cervical Cytopathology Request Form - NW Cytology Dundee

Date Received By Lab	20 Jul 2016
Slide No.	16T1016258
SCCRS No.	1390909726
DOB / CHI	2804880060
Name	ELLIS, STACEY LOUISE
CHI Address	17 ANNAT ROAD, MONTROSE, DD10 8EF
Correspondence	

1390909726

Smear Taker ID	Dr Caithlin Neill
Sender Location	Whitehills Health & C C Centre
Sender Address	Whitehills, Station Road, Forfar, DD8 3DY
Practice Address	LINKS HEALTH CENTRE, FRANK WOOD WAY, MONTROSE, DD10 8TY

Type of Smear	Cervical
Appearance of Cervix	Normal
Current HRT	No
I.U.C.D.	No
Post Natal	No
Currently Immunosuppressed	No

Refer	No Referral
Date Of Exam	19 Jul 2016
Date Sample Taken	19 Jul 2016
Last Menstrual Period	01 Jul 2016

Clinical Comments	Irregular bleeding with nexplanon- anxious so would only tolerate quick examination. Slightly irreg appearance.

Final Cytology Opinion	**High grade dyskaryosis ? invasive**
Infections	
Report Comments	**High grade (severe) dyskaryosis with marked inflammatory response in a defaulter with irregular appearance of cervix. Requires urgent assessment.**
Recommended Management	**Referred to Colposcopy**
Date of Reporting	**27 Jul 2016**
Confirmed by	**Dr Sheila Nicoll - NW Cytology Dundee**

Cervical Cytopathology Request Form (Complete)
