Re: Subject Access Request under the General Data Protection Regulation

PATIENT: GEORGE MCGHEE **D.O.B: 13/11/1961**

Thank you for your request received **5TH JUNE 2026** in which you seek a copy of your client's personal information.

Your request has been dealt with in line with our requirements under Article 15 of the General Data Protection Regulation and I now attach the following:

QUEEN ELIZABETH UNIVERSITY HOSPITAL/ GARTNAVEL GENERAL HOSPITAL/ WEST AMBULATORY CARE HOSPITAL/ WESTERN INFIRMARY

Please be aware that these health records have been reviewed by a clinician and any information identifying or provided by a third party has been removed.

We process personal information to enable us to provide healthcare services for patients; support and manage our employees; to carry out research and clinical trials; maintain our accounts and records and to carry out data matching under the national fraud initiative. We also use CCTV systems for crime prevention.

This personal information can be both clinical and non-clinical in nature and can include

- Patient health records, photographs or radiology images
- Video/telephone recordings, including CCTV images
- Witness statements
- Incident reports
- Complaints files

- Emails

The source of our data includes Patients, General Practitioners, Healthcare, Social and Welfare organisations, Legal representatives and Police forces.

We sometimes need to share the personal information we process with the individual themselves and also with other organisations as listed above. Where this is necessary we are required to comply with all aspects of the General Data Protection Regulation

Where these organisations are based outside Europe we take all appropriate safeguards to protect your information.

Health records are kept for a limited time and this is noted below for your information

- Adult general hospital records – six years after the date of last entry
- Maternity records – 25 years after the birth of the last child
- Children's and young people's records – until the child or young person's 25th birthday.
- Mental health records – 20 years after the date of the last contact

If you have any queries, please do not hesitate to contact us.

If you are unhappy with how your request has been dealt with please contact the NHSGGC Data Protection Officer. Their contact details are noted below:

Data Protection Officer
Information Governance Department
NHS GG&C – 2nd Floor
1 Smithhills Street
Paisley
PA1 1EB
Email: data.protection@ggc.scot.nhs.uk

Yours sincerely

NEWS should not replace sound clinical judgement. Any concerns regarding the patient's condition should be appropriately escalated and documented in the Nursing Notes.

See NEWS Actions Reference Tool for local escalation policy

NEWS Score	Frequency of Monitoring	Clinical Response
0	Minimum 12 hourly	• Continue routine NEWS monitoring with every set of observations.
Aggregate 1- 4	Minimum 4 hourly	• Inform trained nurse. • Trained Nurse assessment: - Assess the patient - Review frequency of monitoring required - Assess need for escalation of clinical care and direct as appropriate.
Aggregate 5 or more or 3 in one parameter	Increased frequency to a minimum of 1 hourly	• Trained Nurse assessment. • Inform medical team caring for the patient. • Urgent assessment by a medical / surgical / nursing team with core competencies to assess acutely ill patients. • Consider level of monitoring required in relation to clinical care.
Aggregate 7 or more	Continuous monitoring of vital signs	• Trained Nurse to assess immediately. • Inform medical team caring for the patient – this should be at least senior medical staff level. • Emergency assessment by a clinical team with core competencies in the assessment of critically ill patients. This team will have critical care competencies and a practitioner/s with advanced airway skills and resuscitation skills. • Consider referral to high dependency or ITU.

Patient Note		**Outpatient Note**
Date/Time: 13-Jun-2023 12:36	**Created By:** Respiratory Nurse Specialist - Joyce Mukupa	**Role:** Nurse - GGC
Specialty: Respiratory Medicine	**Organisation:**	Sensitive

Note:

Pulmonary Rehabilitation- Class Assessment.
Mr McGhee was referred to Pulmonary Rehabilitation by the GP Dr Victoria Shotton on 2/12/22 with history of bronchiectasis.
To-day he attendend face-to-face Assessment at GGH Physiotherapy Department
Assessment was carried out by myself Joyce Mukupa CNS Pulmonary Rehabilitation.
Mr McGhee reported to be feeling well
Verbal consent gained.

HPC- Bronchiectasis disgnosed in 2017 through the CT chest
XR-Chest 2016- suggested COPD.

He reports of MRC-1/2
His main problems is breathlessness

History of 1 chest infection in the last 12 months

Fully vaccinated

Nutritional status- appetite good but now he is trying to loose weight.

PMH
Dyspesia
Ex- smoker cannibis- 13 years ago
Bronchiectasis- 2017

Respiratory Drug History
Carbocistein.
Fostair 200/6
Salbutamol MDI

Inhaler technique- checked and corrected

SH
lives alone in the close on the 3rd floor
Pt. stopped working 2 years ago due to increased breathlessness, he gets disability allowance and PIP- leaflet, Support and information service given to pt.
About 17 stairs, he manages
He cycle all the time and every where,
He is independent but family also help
uses the bath and has applied to the the ground floor house..

Questionnaires
CAT-17/40, PHQ8- 6/24, GAD7- 7/21, LINQ- 14/25

Observations
At rest BP- 135/80, SPO2- 96% room air, RR-12, HR-74 BPM
Walked 450m in 6 minutes with no rest
Pre BCS-0, Post BCS-1

Lowest SPO2-91% room ait, Highest HR- 78 BPM
After 30 seconds rest SPO2- 96% room air.

Advised pt. on the importance of pacing and coping with breathlessness booklet given
Offered the COPD Digital Support service- pt. not interested
Traffic lights for COPD given.
Pt. has all other educational booklets.
Plan; Discharge from service as he is too fit for our service.

Medical patient thromboprophylaxis decision aid – ENSURE BLACK BOX COMPLETED

Is the patient bed-bound or expected to have reduced mobility relative to normal for ≥2 days

☐ Yes ☐ No

Does the patient have any of the following risk factors? Tick if apply			
Active cancer or cancer treatment		Use of oestrogen containing contraceptive	
Age> 60		Hormone replacement therapy	
Dehydration		Pregnancy or <6 weeks post partum (seek specialist advice)	
Known thrombophillia		Critical care admission	
BMI >30		Varicose veins with phlebitis	
Personal/1st degree relative history of VTE		Current significant medical condition e.g. infection, inflammation, cardio resp disease	
Hip fracture			

- No thromboprophylaxis
- Reassess (every 72 hours minimum)and document
- Ensure patient informed of how to reduce risk of DVT (see information leaflet)

☐ Yes ☐ No

Does the patient have any of the following contraindications? Tick if apply			
Active bleeding		Untreated inherited bleeding disorder	
Acquired bleeding disorder		Thrombocytopaenia <75 x109/l	
Thyroid, spinal, posterior eye or neurosurgery		Other procedure with high bleeding risk (discuss with senior)	
Concurrent use of anticoagulants e.g. warfarin with INR>2		Uncontrolled hypertension (>230/120)	
Acute stroke		Varicose veins	
Recent (<4 hours) or expected (within 12 hours) lumbar puncture, epidural or spinal anaesthetic			
Other - Document			

- Discuss with senior clinical staff regarding thromboprophylaxis
- Ensure patient informed of how to reduce risk of DVT (see information leaflet)
- Consider mechanical prophylaxis unless contraindicated
- Reassess (every 72 hours minimum)and document

☐ No ☐ Yes

Enoxaparin 40mg (reduce to 20mg if weighs < 50kg or eGFR <30)

- Reassess every 72 hours minimum
- Ensure patient informed (see information leaflet)

Patient informed ☐ Yes ☐ N/A

NEWS > 4 THINK SEPSIS
Apply SEPSIS 6 within 1 hour

1. Give oxygen to target saturation >94% (COPD 88-92%)
2. IV fluids up to 20ml/kg
3. Take blood cultures
4. Measure lactate and FBC
5. Give IV antibiotics
6. Monitor urine output and fluid balance chart

Think ACE

A Action: Working diagnosis (consider SEPSIS). Consider frequency of observations. Management plan. Set review time. Document.

C Communicate: Inform nurse of plan. Inform senior medic if necessary. Document the discussion.

E Escalate: Document the treatment escalation plan. Should include need for next level of care & consideration of resuscitation status.

Dr Jennifer Coyle, 6055982
Drs Turnbull & Coyle, G157TS
14/07/2016 10:14. Practice: 486559

Thank you for seeing this 54 year old man. Had a funny turn 48 hours ago. Was standing at a funeral, legs went weak, vision blurred, fell to ground. No LOC. Thinks he had similar episode 15 years ago and was diagnosed with an "irregular heart beat" but I cannot find any correspondence in his notes regarding this today. Since this funny turn on Tuesday he has been feeling generally unwell with some chest heaviness and a cough.

[redacted] Tel: 0141 211 6110 Fax: 0141 211 6117

O/E

BP 136/70.

Chest - clear

Pulse 70, regular

CVS: HSI + II + 0, no murmurs.

MP

? LRTI

? cardiac cause for symptoms.

Thank you for seeing him,

Dr Coyle.

Dear Doctor,

George Martin McGhee; D.O.B: 13/11/1961; CHI: 1311616039
FLAT 0-1, 129 EARL STREET, Glasgow, Lanarkshire, G14 0DE

DIAGNOSIS:
1. Bronchiectasis - symptoms improved on Azithromycin
2. Combination of alcohol related liver disease and metabolic liver disease - under review in liver clinic

I spoke to Mr McGhee again from the respiratory clinic recently. He told me he is currently feeling well. He finds that his cough and sputum exacerbations have improved on Azithromycin. On examination Mr McGhee appeared well. Oxygen saturations were 96% on air and auscultation of the chest revealed occasional crackles.

I have requested an interval HRCT scan to be performed in 11 months time and I will see Mr McGhee again in the clinic in one year.

Yours sincerely

Dr Steve Bicknell

Dear Dr Clark,

George Martin McGhee; D.O.B: 13/11/1961; CHI: 1311616039
FLAT 0-1, 129 EARL STREET, Glasgow, Lanarkshire, G14 0DE

DIAGNOSES
1. Bronchiectasis - on Azithromycin - liver ultrasound suggests chronic liver disease - liver screen awaited - MRI requested for hyper echoic lesion in right lobe - referred to gastroenterology.
2. Previous alcohol related hepatitis.

Further to previous correspondence Mr McGhee has attended for a liver ultrasound. This shows changes suggestive of chronic liver disease - a liver blood screen is awaited. The ultrasound mentioned a hyper echoic lesion in the right lobe of the liver and I have requested an urgent MRI for clarification of this. I have referred Mr McGhee for out patient gastroenterology review. I have explained the liver ultrasound results to Mr McGhee and advised him to remain abstinent from alcohol. I will continue to review him in the respiratory clinic.

Yours sincerely,

Steve Bicknell

Dear Dr Clark,

George Martin McGhee; D.O.B: 13/11/1961; CHI: 1311616039
FLAT 0-1, 129 EARL STREET, Glasgow, Lanarkshire, G14 0DE

DIAGNOSES
1. Bronchiectasis - on Azithromycin.
2. Disordered LFT's ? cause - for ultrasound and liver screen.
3. Previous alcohol related hepatitis.

Mr McGhee's LFT's were disordered when checked at his clinic review in March. There was a plan for a liver ultrasound but Mr McGhee has telephoned to say that this has not been requested. I spoke to Mr McGhee today and he tells me that he does have a history of alcoholic hepatitis many years ago but has been drinking much less in recent years. He is overweight but his BMI is likely to be in the 25-30 range. I have now requested a liver ultrasound and a liver screen via the phlebotomy hub. I will refer Mr McGhee to gastroenterology if indicated by the ultrasound or liver screen.

I will continue to review Mr McGhee with regards to his bronchiectasis.

Yours sincerely,

Steve Bicknell

Dear Dr Clark,

George Martin McGhee; D.O.B: 13/11/1961; CHI: 1311616039
FLAT 0-1, 129 EARL STREET, Glasgow, Lanarkshire, G14 0DE

DIAGNOSES
1. Bronchiectasis - on regular Azithromycin.
2. Ex cigarette smoker.

I reviewed Mr McGhee at Dr Bicknell's respiratory clinic via telephone on 6th March. Since his last appointment in September last year, he tells me he has only had one chest infection in December which was treated with a one week course of oral Doxycycline. He presented at that point to the GP with a cough for 9 days productive of green sputum. After a 7 day course of Doxycline, the cough persisted for a couple of weeks and them completely resolved. Since then he has been symptom free; he has not reported any worsening shortness of breath, cough, haemoptysis or subjective weight loss. From a respiratory stand point, his symptoms are very well controlled. He remains compliaint with Azithromycin on Mondays, Wednesdays & Fridays. He has not had bloods since April last year so I will request routine updated bloods. He is happy to be seen in one years time for a face to face appointment. I have advised that if anything changes in the interim and he feels he should be seen sooner, he can contact his GP and we can try and facilitate an earlier appointment.

Yours sincerely,

Crystal Mieres

Dear ,

George Martin McGhee; D.O.B: 13/11/1961; CHI: 1311616039
FLAT 0-1, 129 EARL STREET, Glasgow, Lanarkshire, G14 0DE

DIAGNOSES
1. Bronchiectasis - on regular Azithromycin.
2. Ex cigarette smoker.

I spoke with Mr McGhee on the telephone from Dr Bicknell's respiratory clinic today. I was pleased to hear that he has had no further chest infections since starting on Azithromycin. As well as this, he has complete resolution now of his cough. He does not suffer from any ongoing shortness of breath. He is awaiting to see the ENT team regarding ongoing nasal stuffiness and has been on regular steroid nasal sprays for around 5 months now with no relief in symptoms.

His blood tests performed during his last clinic visit were unremarkable. I have advised Mr McGhee to continue with his Azithromycin and we will review him again in around 6 months time.

Yours sincerely,

Hannah Gorgui-Naguib

Dear Dr Clark,

George Martin McGhee; D.O.B: 13/11/1961; CHI: 1311616039
FLAT 0-1, 129 EARL STREET, Glasgow, Lanarkshire, G14 0DE

DIAGNOSES

1. Bronchiectasis - symptoms much improved on regular Azithromycin.

2. Ex cigarette smoker.

I reviewed Mr McGhee in person at my respiratory clinic today. He told me that he is feeling very much better since taking Azithromycin 500mgs 3 times weekly on a regular basis. He has noted almost complete resolution of his cough and sputum with no further infections - he describes the response as "miraculous". Mr McGhee does describe some persisting nasal obstruction which has not improved with the Azithromycin and I will therefore refer him to the ENT department.

On examination Mr McGhee was undistressed at rest. Oxygen saturation was 98% on air. Auscultation of the chest was clear.

I have taken bloods for immunoglobulin levels and aspergillus serology. **I would be grateful if you could prescribed Azithromycin 500mgs 3 times weekly on an indefinite basis.**

I have arranged to review Mr McGhee again in 4 months time.

Yours sincerely,

Steve Bicknell

Dear Dr Clark,

George Martin McGhee; D.O.B: 13/11/1961; CHI: 1311616039
FLAT 0-1, 129 EARL STREET, Glasgow, Lanarkshire, G14 0DE

DIAGNOSES
1. Bronchiectasis.
2. Ex cigarette smoker.

I spoke to Mr McGhee from the respiratory clinic today. He has a long history of productive cough and a CT scan performed in Gartnavel in 2017 demonstrated mild to moderate bronchiectasis. Mr McGhee told me that at present he is experiencing quite marked persistent symptoms with cough and large amounts of green sputum. He has not experienced haemoptysis or chest pain and his weight is steady. He smoked cigarettes until 13 years ago and previously smoked cannabis. He has not been exposed to industrial irritants and has not kept birds. He takes Fostair and Salbutamol inhalers.

Reviewing the CT scans there is indeed mild to moderate bronchiectasis.

I would be grateful if you would prescribe Azithromycin 500mgs on Mondays, Wednesdays & Fridays for a 4 month period.

I will review Mr McGhee again in person in the respiratory clinic at Gartnavel General Hospital in 4 months time.

Yours sincerely,

Steve Bicknell

Dear VJ Shotton,

George Martin McGhee; D.O.B: 13/11/1961; CHI: 1311616039
FLAT 2-1, 69 ABBOTSHALL AVE, Glasgow, Lanarkshire, G15 8PL

Thank you for referring the above named person to Pulmonary Rehabilitation on the 2nd December 2022 with history of bronchiectasis.

Mr McGhee attended face-to-face Pulmonary Rehabilitation today on 13th June 2023 at GGH Physiotherapy Department.

The table below is showing the results of his 6 Minute walk Test.

6MWT	***Pre***
BP	135/80
Resting O2/Hr	96% room air, HR-74 BPM
Distance Walked	450m no rest
Lowest O2/Highest Hr	91% room air, HR-98 BPM
BCS	Pre BCS-0, Post BCS-1
CAT	17/40
PHQ8	6/24
LINQ	14/25
GAD7	7/21

Mr McGhee reported to have the MRC 1/2 and he walked 450m in 6 minutes with no rests. His Pre Breathing Control Score was 0 and Post Breathing Score Score 1. The lowest SPO2- 91 and Highest HR- 78 BPM.

The results shows that at the moment he is too fit for our criteria as we take patients with MRC score of 3 and above.

We have now successfully discharged him from our service, but you are free to re-refer him back in future when he meets our criteria

Kind regards

Joyce Mukupa

Dear Dr Coyle,

George McGhee; D.O.B: 13/11/1961; CHI: 1311616039
F2-2, 46 JEDWORTH AVE, Glasgow, Lanarkshire, G15 7QH

This gentleman has now had his 24 hour tape following his admission in July with what sounds like a syncopal episode at a funeral. This shows sinus rhythm with 4 dropped beats over the period that was monitored. These occurred in isolation and were not associated with any symptoms. I don't think anything else requires to be done with this, and I have not arranged any further follow-up.

Yours sincerely

Dr Beth White

Consultant Physician

Dear Dr Coyle,

George McGhee; D.O.B: 13/11/1961; CHI: 1311616039
F2-2, 46 JEDWORTH AVE, Glasgow, Lanarkshire, G15 7QH

Thank you for referring this patient who has a history of shoulder pain. This happened 6 months ago but has since resolved. He describes his pain as 1/10 on the visual analogue scale. He now has no functional deficit and is able to do all activities of daily living and his job with no problems.

On examination he has a full range of movement, full strength and negative impingement tests.

As his symptoms have resolved, I have not given him a joint injection today. He has the clinic number should his symptoms reoccur within one year. He knows that if his symptoms recur after the year then he should get a GP referral back to the clinic.

Thank you for your referral.

Yours sincerely,

Marie Therese McDonald

Attendance: Specialty - Respiratory Medicine; Clinic - GGCCRE8-RESP DR C CARLIN THURSDAY PM
Date and Time of Appointment - 02/02/2017 14:00

Clinical Comments:

Diagnosis:
1. **Right middle lobe bronchiectasis.**
2. **Ex-smoker.**

Thanks for referring George and he came to the Respiratory Clinic this afternoon, having had a CT thorax done a few days ago.

He had a bout of bronchitis in the middle of last year. He had a more prolonged episode (now fully resolved) in December which had prompted chest X-rays. Happily, CT thorax has clarified that the x-ray appearances just relate to right middle lobe syndrome with superimposed consolidation.

Spirometry is normal.

I've said that his right middle lobe bronchus is at an unfavourable angle and that he is going to be prone to (hopefully minor and occasional) bouts of acute bronchitis. There isn't anything that needs done for now. I have given him a sputum sample pot to collect if he has a further infective episode, and he should have a minimum of a week's course of antibiotics at full strength, refocused on any positive sputum microbiology if things don't settle. If he is running into problems with difficult recurrent infections we could see him back on re-referral, but for now I have not arranged routine review.

Yours sincerely

Date and Time of Appointment - 13/02/2015 13:45

Follow Up: None

Clinical Comments:

Thank you for referring this 53-year-old gentleman who became husky a few weeks ago. It was associated with a cough. He denies dysphagia, throat pain or haemoptysis. There is no weight loss. He stopped smoking three years ago. He tells me that he feels his symptoms have now improved.

On examination, the nose, oral cavity and oropharynx were unremarkable. On flexible nasendoscopy, he had a normal tongue base, larynx and hypopharynx, and the neck was clear on palpation.

I have reassured this gentleman that I do not see anything sinister going on. I have discharged him from the clinic but clearly would be happy to see him in the future if you remain concerned.

With kind regards,

Yours sincerely,

Dear Mr McGhee,

Diagnoses:

1. Met-ALD with severe fibrosis/early cirrhosis on liver Fibroscan in September 2025;

2. Bronchiectasis

Plan for follow up:

1. Ultrasound as previously planned in March 2026;

2. Liver nurse in 6 months;

3. My clinic 1 year

You were seen sooner than previously planned in clinic today due to you having worries about your health.

You've been in contact with a doctor in Turkey, although from the information you showed me today I couldn't confirm the doctor's specialism. You were asking about an operation for your liver, but I've explained to you that there's nothing about your liver that an operation would fix. The hemangiomas are benign and harmless and do not need removed. In fact removing part of your liver would only make your liver function likely to deteriorate and would not fix any problems.

We discussed again that you have fatty liver disease from a combination of alcohol in the past and metabolic associated fatty change and your liver stiffness is raised in keeping with your diagnosis of severe fibrosis/early cirrhosis. Your liver function is good and you are not having any complications or symptoms from your liver disease.

You are probably slightly over weight at 76kg but you remain active which is very positive.

I am happy to continue on your routine follow up and will arrange to see you again with the nurses in 6 months and in my clinic in 1 years time and we will do another ultrasound on a 6 monthly basis. This is standard care for people with stable liver disease.

You had your blood checked at clinic today and these showed that you have a normal bilirubin at 10, a very mildly raised ALT at 57, AST of 34, Alkaline Phosphatase of 140 and a preserved albumin of 42. These are reassuring results. In addition, your kidney blood tests, full blood count and blood clotting were all within normal parameters.

I hope you take some reassurance from this and will be happy to continue with your routine follow up and at some stage we will repeat your Fibroscan to see if there has been any change for the better or worse in the future.

Kind Regards

Dr Heather Lafferty

Consultant Physician and Gastroenterologist.

Dear George,

Diagnosis:

Probably Met ALD - ie combination of metabolic and alcohol associated fatty liver change

Liver stiffness 13.8 kPa: CAP Score 310 suggestive of severe fibrosis, possible early cirrhosis and high degree of fatty change

Bronchiectasis

Plan for Investigation:

Repeat ultrasound scan 6 months

Plan for follow up:

Liver Nurse Clinic 6 months

Dr Lafferty's Clinic 1 year

Repeat fibroscan in 1 year

It was nice to meet you in the Liver Clinic today. You had been referred by Dr Bicknell who you see for your bronchiectasis. He had noticed that your liver blood tests were persistently high and had organised imaging of your liver. This had shown fatty change in the liver but also a solid nodular lesion within your liver that required further investigation. You went on to have an MRI scan and I was pleased to tell you that the abnormal solid lesion in your liver is a haemangioma, which is a benign finding of no consequence.

Your liver does have an appearance of fatty change with some irregularity of the liver, which suggests liver scarring or cirrhosis.

We discussed your risk factors for liver disease in the Clinic today. You tell me that you drink half of bottle of vodka once a fortnight on the weekends when you are not looking after your daughter. Your weight recorded today at 75.9kgs gives you a slightly high BMI but you are not grossly overweight. There is no known family history of liver disease and so far blood tests for genetic, viral causes of liver disease have proved negative, although we have sent further testing today for autoimmune liver diseases. (This also proved negative/normal)

We carried out a fibroscan to measure your liver stiffness and this did give a high reading at 13.8, which along with the MRI appearances makes me concerned that there is potentially severe fibrosis or even early cirrhosis in your liver. This would likely be due to fatty change due to a combination of being slightly overweight and drinking a bit above healthy amounts. This goes along with the high CAP score which is a reflection of fatty change and would fit with this diagnosis.

I have said that we should follow you up as if you have liver cirrhosis but repeat the fibroscan in 1 year's time to see if things got better of worse. I would suggest aiming for a bit of weight loss and also stopping alcohol altogether, which you fully intend to do.

I will arrange for our Nurses to give you a phone call in about 6 months and to see you in the Clinic myself in 1 year's time and in the meantime will repeat an ultrasound scan in 6 months to keep an eye on things.

We also did discuss some supplements that you had bought over the internet, which include a liver detox supplement and a milk thistle supplement and I have recommended against taking these and I thought you should try and get your money back if possible. There is no good evidence for these things and there is a small chance they could cause harm. You had also been given Thiamine by a relative, however, I don't think that you need this. This is something that is given for protection of the nervous system in people who are undernourished or who are suffering from alcohol use disorder and therefore I don't think that you require to take this either.

Best wishes

Yours sincerely

Dear Mr McGhee,

You were seen in the assessment unit on 1st December with a chest infection. Your x-ray on that day had been reported as showing evidence of an opacity in your left lung which is most likely to be due to your infection. It is standard practice to repeat your x-ray about 6 weeks after it has been done and I have booked one for you. I will write to you with the result, which will hopefully show a clearing up of all the previous changes.

Yours sincerely

Dear George McGhee,

You may be aware that you're GP Hospital Doctor or Respiratory Nurse has referred and recommended you to be assessed for a Pulmonary Rehabilitation Programme.

Pulmonary Rehabilitation is an 8 week exercise and education programme which has proven to have significant health benefits for patients with chronic lung disease.

You have the option of either attending a class based Pulmonary Rehabilitation Programme held within a local hospital or local authority leisure centre or a home based Pulmonary Rehabilitation programme to undertake in your own home with remote supervision from the team.

We have included an information leaflet with this letter which provides you with more information to help you decide which option you would prefer.

If you would like to participate we would now ask you to contact us on the following number to confirm that you wish to participate and the option you would prefer.

A voice mail option is also available to allow you to leave a message with your contact details and to advise us of which programme you would prefer.

If we do not hear from you within two weeks of receiving this letter we will assume you do not wish to participate in the programme and will remove you from our waiting list and inform the referrer.

We hope the information leaflet provided is helpful to allow you to make your choice however, please contact us on the above number should you wish to discuss the referral and the programme options available.

We look forward to hearing from you.

Yours sincerely

CLINICAL INFORMATION

History of presenting complaint
Presenting complaint

Description: Suggestive chronic liver disease and a hyper echoic lesion.

Comment: Dear Matt Priest,

This 63 year old gentleman attends my clinic due to bronchiectasis. Some routine bloods earlier in the year showed disordered LFT's and an ultrasound has now shown features suggestive of chronic liver disease and a hyper echoic lesion in the right lobe for which I have requested an urgent MRI for clarification. Further LFT's are awaited via the phlebotomy hub. Mr McGhee does have a past history of alcohol excess with alcoholic hepatitis but he has been largely abstinent in recent years.

I would be grateful if Mr McGhee could be reviewed with regards to his liver disease.

Kind Regards

Yours sincerely,
Steve Bicknell

CLINICAL INFORMATION

History of presenting complaint
Presenting complaint

Description: Chronic nasal stuffiness

Comment: This gentleman has mild to moderate bronchiectasis of uncertain cause which has responded very well to regular Azithromycin. He also describes chronic nasal stuffiness and obstruction which has not improved with Azithromycin. I would be grateful if you could review him in your clinic in this regard.
Many thanks.
Yours sincerely,
Steve Bicknell

CLINICAL INFORMATION

History of presenting complaint
Presenting complaint

Description: Acute SOB and chest pain

Comment: Dear Doctor, I would be grateful for your assessment of this 62 year old gentleman with a history of bronchiectasis and hypertension, who has presented with a 3 day history of acute onset shortness of breath, chest pain and feeling generally unwell. He states he has had a dry cough and is feeling very cold. He denies any fever/chills/other URTI or infective symptoms. He states he had pain across his chest three days ago that did not radiate. He denies palpitation or episodes of LOC. He has had no episodes of chest pain since. He states he has been unable to sleep due to breathing difficulties and has been struggling to use his inhalers. Unable to use inhalers today. On clinical examinationt today he looks unwell & is pale. He is speaking to me in sentences but his breathing is effortful (he states he struggles because of his broken nose) T 37.2 HR reg at 120bpm. BP 158/93. Sats sitting on air between 94-95%. Chest is clear ?l. Nil peripheral oedema. Imp - Unwell. No clear infectious foci on clinical examination ?Resp ? PE ? Cardiac. Needs further investigation. P - Referred to QE via medical receiving. He does not drive & has no one to accompany him to hospital. I have arranged for him to be transported via taxi. Thank you in advance. Dr Cara Bezzina - Mat Locum. GMC 7510105

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: COPD

Comment: Thank you for seeing this 61 year old gentleman who was diagnosed with bronchiectasis in 2017. He is an ex-heavy smoker and moved to the area three years ago. His breathing and sputum expectoration has worsened and he is keen to learn exercises to help him to cope with the shortness of breath. I would appreciate an assessment and advice for this gentleman. Thank you for your time.

Kind regards

Alison Harkness
Advanced Nurse Practitioner.

Hi Jenna

Can you please send the man's details onto us.
Can you explain we have no active programmes at present, but will add him to our list of patients. We will call him

Thanks Elaine

Subject: [ExternaltoGGC]Pul rehab referral query

Hi Elaine,

I was wondering if you could help? We have a man who was doing a HEP Pul rehab programme prior to COVID19. He was doing a HEP asa opposed to a class as he was due to move to Glasgow, Drumchapel area. I have since called him and he is keen to be refereed onto Glasgow Pul rehab services now that he has moved. I explained that all Pul rehab services are looking very different in light of COVID19 and so not sure what you might have the capacity to offer and he was understanding of this. Could you let me know how best to refer to yourselves?

Thanks,

Jenna Strang

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: Abnormal CXR, ? malignancy. Persistent cough

Comment: Dear Doctor

Thank you for seeing this fifty five year old man. He has been coughing since mid November 2016. When he was seen in late November he had some creps in the left base and was treated with Amoxicillin. He returned on the 20th December with an ongoing cough. At that point his chest was clear. He works in a kitchen and there has been no recent change in his home or work environment and he feels well. He is an ex -smoker. He stopped about five years ago and had been smoking up to about ten cigarettes a day until that point. A chest x-ray was requested and has been reported as showing an irregular opacity medially at the right base associated with atelectasis. This has progressed since the previous film. The appearances could reflect infection or neoplasm. An urgent respiratory referral was advised.

In light of his abnormal chest x-ray and persistent cough I would appreciate your urgent assessment.

Thank you for seeing him.

Yours sincerely

Dr Jennifer Coyle

CLINICAL INFORMATION

History of presenting complaint
Presenting complaint

Description: Right shoulder pain

Comment: Dear Doctor

Thank you for your expert review of this gentleman who has been complaining of right shoulder pain since May 2015. He works as a cleaner in a pub and there is no history of injury or trauma. In the past few months he has been struggling to do his job properly and has various notes from his employer dui to the unfinished work. He has been struggling and he has had various analgesics and also physiotherapy with limited benefit. His right shoulder is tender anteriorly and has a range of movement which is reasonably good but with restricted at extremes and especially painful on external rotation. He was diagnosed with impingement syndrome and I wonder if he needs a steroid injection which might help improve the pain as he is struggling to cope at work.

Thank you for your specialist review and opinion.

Yours sincerely

Dr Kulwant Sambi

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: hoarseness 6 weeks and discomfort throat

Comment: This man complains of hoarseness for the past 6 weeks and feels the need to clear his throat frequently. He is coughing up clear spit and saliva. He also has some tenderness of the left side of his neck.

His throat appears normal. He has a slightly enlarged tender cervical lymph node on the left side of his neck.

He is an ex-smoker of 3 years and tells me he rarely drinks alcohol.

Could he be seen for examination at your clinic?

Dr Anne Turnbull

US Abdomen

Performed	06-Mar-2026 16:11	Received	12-Mar-2026 15:44
Reported	12-Mar-2026 15:42	Order Number	G504H42708290
Status	Final	Source System	MiSys

US Abdomen Final
George Martin McGhee
Clinical History : HCC surveillance due March 2026 Known 2.5cm haemangioma

US Abdomen :

Reference is made to previous imaging.

The liver is normal in size with a regular outline. The overall echogenicity of the liver parenchyma is echo bright in keeping with fatty change. Focal fatty sparing is noted at the fundus of the gallbladder. Within the right lobe a 2.9 x 1.8 cm hypoechoic focus is demonstrated. This is avascular. Ultrasound appearances are consistent with the known haemangioma. No obvious focal abnormality.

Hepato-petal flow was demonstrated in the portal vein.

The spleen is normal in size.

No free fluid.

Impression: No change since previous imaging

Verified by:
Claire Lindsay

MRI Liver with hepatobiliary contrast

Performed	11-Sep-2025 08:40	Received	18-Sep-2025 14:59
Reported	18-Sep-2025 14:57	Order Number	G504H42583352
Status	Final	Source System	MiSys

MRI Liver with hepatobiliary contrast Final
George Martin McGhee
Clinical History :

Probable alcohol related liver disease. Recent ultrasound shows 2.9 cm lesion nature certain - Urgent MRI as advised by Dr Simon Sheridan.

MRI Liver with hepatobiliary contrast :
Standard MRI liver sequences with Multihance used as contrast agent. Reference is made to US 15/08/2025 and CT Thorax and abdomen dated 26/01/2017.

Diffuse hepatic steatosis with focal fatty sparing around the gallbladder fundus. Minor left lobar enlargement with slightly nodular contour but not diagnostic of cirrhosis or portal hypertension. Patent portal vein.
Seg 8: 25mm benign haemangioma, unchanged in size in comparison to CT 2017 - well defined low T1/ high T2 observation with nodular discontinuous progressive contrast enhancement on dynamic imaging. Hepatocyte poor and patchy restricted diffusion.
No concerning hepatic observations.

Simple left renal and splenic cysts.

Summary: Benign hepatic haemangioma. No concerning hepatic observations.

Verified by: Dr Fiona Conway

US Soft tissue

Performed	20-Aug-2025 11:05	Received	20-Aug-2025 11:13
Reported	20-Aug-2025 11:11	Order Number	G504H42086387
Status	Final	Source System	MiSys

US Soft tissue Final

George Martin McGhee
Is the Lump Tender and/or Non-mobile? : No
Is the size of Lump greater than 5cm? : Yes
Any significant growth over past 3 months? : No
Location of Lump: : Right lumbar back area
Recently noticed a lump on his back, no painful, not sure how long has been there, firm, mobile on examination, ?Lipoma

US Soft tissue:

Palpable lump right lower back corresponds to a 2.4 cm lipoma. No concerning features.

Reported by: Iain McHardy (Sonographer)
Verified by: Iain McHardy (Sonographer)

US Abdomen

Performed	15-Aug-2025 09:52	Received	15-Aug-2025 15:25
Reported	15-Aug-2025 15:23	Order Number	G504H42516676
Status	Final	Source System	MiSys

US Abdomen Final
George Martin McGhee
Clinical History:
Alcohol related hepatitis many years ago - much reduced intake - recently disordered LFTs - US to assess liver. Could this test be performed urgently as request omitted in error in March 2025.
(Information via Order Comms)

US Abdomen:

The liver is irregular outline, coarsened and enlarged. Ultrasound appearances are suggestive of fatty infiltration. There is a 0.8cm area of focal fatty sparing adjacent to the gallbladder.
There is a singular ovoid avascular 2.9cm hypoechoic lesion seen in the right lobe of liver. Ultrasound appearances are indeterminate and malignancy cannot be excluded.
Normal directional flow in portal vein.

The gallbladder is thin-walled with two gallbladder wall polyps (largest 6mm). As per local protocol, this requires an annual review.
Normal appearance of the pancreas (fatty), biliary tree, aorta, kidneys and spleen.
No free fluid.

Summary:
1. Urgent referral to gastroenterology with a view for further cross-sectional imaging to assess 2.9cm indeterminate intrahepatic lesion in right lobe of liver.
2. Gallbladder wall polyps require annual review.

Examination and report by Lynsey Blair, Sonographer.
Report verified by Jayne McElroy, Lead Sonographer.

XR Chest Final
George Martin McGhee
Clinical History :

OP FU CXR please. Previous CXR on 1/12/23 reported L MZ Opacity. FU recommended after 4-6 weeks

XR Chest :
There is no evidence of active pulmonary disease. The ill-defined opacity in the left mid zone demonstrated on the last examination of 01/02/2023 has resolved.

Reported by: Dr Michael Sproule
Verified by: Dr Michael Sproule

XR Chest

Performed	01-Dec-2023 14:01	Received	05-Dec-2023 09:32
Reported	05-Dec-2023 09:30	Order Number	G405H40365175
Status	Final	Source System	MiSys

XR Chest Final
George Martin McGhee
Clinical History :

dry cough and SOB.
Infection? PE?

XR Chest :
Comparison is made with previous studies most recent 07/11/2022. Normal cardiac and mediastinal contours. New ill-defined opacity left mid zone is most likely to reflect consolidation due to infection given the clinical setting. Follow-up after antibiotic therapy with repeat examination in 04-06 weeks is recommended to ensure resolution.

Reported by: Dr John Sheridan
Verified by: Dr John Sheridan

XR Chest

Performed	07-Nov-2022 09:51	Received	09-Nov-2022 17:20
Reported	09-Nov-2022 17:18	Order Number	G504H39023273
Status	Final	Source System	MiSys

XR Chest Final
George Martin McGhee
Clinical History :
bronchiectasis, 3 week cough, 2x course abx, ongoing cough and some SOB ?consolidation ? opacity

XR Chest :
The cardiac and mediastinal contours are normal.
The lungs are clear.
No change from previous radiograph of 20/12/2019.

Reported by: Dr Iain Andrews

CT Thorax and abdomen with contrast

Performed	26-Jan-2017 15:07	Received	27-Jan-2017 16:41
Reported	27-Jan-2017 16:39	Order Number	G504H32247190
Status	Final	Source System	MiSys

CT Thorax and abdomen with contrast Final
George McGhee
Clinical History :

tracked smoker, cough, evolving RLZ abnormality - further evaluation please

CT Thorax and abdomen with contrast :

Mild cylindrical bronchiectasis is present in the medial segment of middle lobe. There is very minor atelectasis at this site, and these changes are thought to account for the radiographic opacity.

Otherwise, lungs are clear. Posteriorly in right lower lobe a 4 mm ovoid opacity lies a short distance from costal pleura; in sagittal section this lesion is flat and almost certainly benign.

No significant mediastinal lymphadenopathy and no pleural effusion.

In segment VII of liver, a 20 mm focal lesion is noted, with a heterogeneous pattern of enhancement suggestive of a haemangioma. No adrenal mass. No destructive lesion in the skeleton.

OPINION: No evidence of intrathoracic malignancy.

XR Chest

Performed	04-Jan-2017 09:36	Received	11-Jan-2017 14:16
Reported	11-Jan-2017 14:14	Order Number	G504H32201537
Status	Final	Source System	MiSys

XR Chest Final
George McGhee
Clinical History :
Ex-smoker with persistent cough.

XR Chest :
Comparison with 14/07/2016.

Normal heart size and mediastinal contours. There is an irregular opacity medially at the right base which is associated with atelectasis and has progressed since the previous film. Appearances could reflect infection or neoplasm.

Urgent respiratory referral to facilitate CT evaluation is advised.
