Dear Dr PT Stewart

Presentation: broken hand

CHI: 0407813233

PC: Right hand pain

HPC: 30yo male asked for x-ray of right hand due to pain and ongoing swelling for several weeks but was here whilst his partner was being assessed so booked himself in. Mechanism of injury uncertain as old but patient states 'bones move around in hand all the time'. Previous history of fractures to right hand.

O/E
Right metacarpal region swollen with tenderness most pronounced over 2nd metacarpal proximally and 4/5th distally. No wrist tenderness. Full ROM at joints mcp and wrist, some tenderness on wrist extension but otherwise ok.

Imp: ?#

Plan:
Xray - No evidence of # on x-ray, reviewed with Colm McCarthy ST6.
Patient discharged with tramadol for analgesia, advised to see GP if ongoing pain.
We will phone him if # on formal report.

Yours Sincerely,

Dr Max Clayton-Smith, Doctor

ST3 Ortho

32 y/o gentleman presented having fallen from a 6 foot high fence. Penetrating injury to right midforearm. In attempt to prevent further penetration he got his right wrist caught in between the railings. No other injuries. Conscious throughout.

Background
No cardiorespiratory co-morbidities
Previous GA for left wrist arthroscopy
NKDA
Psychosis and depression.
Last ate 1200 and last drank 1500.

O/E
Right forearm wound mid-forearm. ~5cm2 area of skin. Visible muscle flexor muscle bellies.
Median, ulna and radial nerves intact. Pulses present. CRT <2s.

Plain radiographs
Right perilunate dislocation.

Plan
IV co-amoxiclav 1.2 grams
IV fluids
Keep fasted, mark and consent for wound debridement, exploration , washout plus open reduction +/- internal fixation of carpus

Yours Sincerely,

Dr Shao-Ting Jerry Tsang, Doctor

Dear Dr PA Hepple

Presentation: Localised swelling / redness / lumps / bumps, Right arm problem

IMPRESSION/DIFFERENTIAL DIAGNOSIS:

Abscess

CLINICAL NOTES:
Clinical note: Ortho 2181 MACLEOD. CT1. Cons: Brown

Right Upper Arm Abscess
IVDU.
Oct 2017 - -ve BBV.

INjected 2/52 - into bicep
Since 5/7 noticed erythema and swelling.
ON flucuxacillin in community
Abscess now pointing

PMHx: Nil; IVDU
Social: Unemployed smoker

O/E:
POint abscess over distal bicep
4 x 6cm area induration
3x3 cm erythema
NV intact.

X-ray : nil retained FB

Attempted I&D:
5ml 1 mil lidocanie applied

cryospray applied
20mg morphine given
entonox used.
Procedure stopped due to patient not tolerating pain.
approx 100 ml pus expressed.

IMP
However suspect still loculated collection

PLAN
1. Will require formal I&D
2. Admit Ortho
3. M&C - I&D abscess
4. Analgesia
5. IV co-amoxiclav
6. FY clerkign pelase
7. NBM

Dear Dr S Allan

Presentation: Injury of hip / leg / knee / ankle / foot, right groin/leg infection ?

CLINICAL NOTES:
Clinical note: PC Rt leg pain

HPC
Patient presneted to A+E with Rt leg pain that started last Monday after he injected herion in his Rt leg
Said that it started as a niggle and has been gradually getting worse
Described as constant dull aching and throbbing pain in his Rt inguinal region going down to the front of his thigh and his calf muscle
Scored as 8/10, and says it feels tight when he tries to walk and gets tighter by time
He has been taking some Abx that he had at his house (Co-amoxicalv) thinking that it might be an infection and the Abx might clear it out
He denies any fever, feeling unwell
No flu like symptoms, cough, SOB, change in smell or taste
No abdo pain, change in bowel habits, UTI symptoms
Had an infection in injection sites in both arms before and says the pain feels similar but worse in nature
Admitted to herion injection last Monday but denied any drug use or injection since

PMH
IVDU
Mental health problems

DH
Methadone
Queitiapine

Sertraline

SH
Smokes 40 CPD
IVDU

O/E:
NEWS 1 , HR 102
Equal reduced air entry, no added sounds
Abdo Soft with slight tenderness over RIF
Rt inguinal red swollen area with hard lump around injection site
Diffuse redness on the medial side of the thigh, tender, hot to touch, no skin markings, obvious swelling
Firm calf muscle on the Rt side with obvious swelling

IMP
? groin abcess, ? proximal DVT

Plan (D/W Dr. Skinner ED Cons)
Bloods inc D- dimers

D/W Vascular on call Dr. Cassidy
Advised refer to eneral surgeons as a Rt groin abcess
CT angio and if confirmed pseduoanuerism to refer back to vascular

D/W genral surgery
Advised need CT angio to decide destination of admission

_____
M Lau CDF - care taken over

Patient reviewed in obs ward:
Ongoing R leg pain, dose of oramorph given
Obs otherwise stable

o/e
R leg - small 1cm hard lump palpable in R groin, not fluctuant (likely scar tissue rather than abscess). Superficial veins seen along R medial thigh and calf, with calf measuring 38.6cm (compared to 35.2cm in L calf). No erythematous change in leg. Tender to palpate along anteromedial thigh and R calf
L leg nad

CT report:
1) No pseudoaneurysm or collections of the right groin.
2) No venous contrast phase images available. Distended right femoral vein with surrounding inflammatory stranding is highly suggestive of deep venous thrombosis. A duplex ultrasound will be helpful in confirming the diagnosis if any clinical doubt persists.

Imp:
R leg DVT - Wells 3

Patient haemodynamically stable and is well in department. Suitable for ambulatory care referral

Dalteparin
Leg US doppler requested
Worsening advice provided to patient and is aware he will receive a phone call from the relevant dept re appt time in the morning

Yours Sincerely,

Abdelrahman Shahin, Doctor

Dear Dr S Allan

Presentation: ?GI bleed

CLINICAL NOTES:
Clinical note: CHI: 0407813233
BIBA - 999 Emergency

39 yo male with 3 days of constant abdominal pain with intermittent colicky worsening. "Feels like when I was stabbed". Associated nausea, vomiting, and frequent loose, watery stools. Haematemesis reported 3 days ago but none since. Bright red blood on wiping stools; reports having had piles previously. Uncertain of stool colour. Denies pain on passing stool. No dysuria or change in urine character. No SOB, chest pain, headache or dizziness. No change in diet. Not eating or drinking since vomiting began.

Discharged on 06/04/21 on dalteparin for provoked extensive right leg DVT (ext iliac to SFV) secondary to IVDU. Prior to attending for DVT, he had tried 3 days of co-amoxiclav to treat his right leg pain, over 1 week ago.

Lives alone. Smokes 40 cig/day "for a long time". He has not had any alcohol for approximately 2 weeks and no further IV drug use since 29/03/21.

Obs: T 36.6, HR 110, BP 140/109, RR 20, Sats 98% in air

Exam: GCS 15, alert and appropriately conversational. In pain.
PERRL, pupils 3-4 mm
WWP
Heart sounds I+II+0
Chest clear to auscultation
Pain with deep inspiration
Abdomen diffusely tender. Worst in RLQ and LLQ. Voluntary guarding, no rebound tenderness, hypoactive bowel sounds.
No peripheral oedema
Right hand erythema/oedema at 4th MIP. Nontender.
Rectal exam performed with consent under chaperone Emily, student nurse. No external haemorrhoids visible. Soft stool in rectum; bright red blood mixed with stool on glove. Good anal tone. Tender examination.

Bloods:
FBC - Hb 153 (151 on 05/04/21), WBC 13.7, Neut 10.9

ECG: Sinus rhythm

CXR: Nil acute; no free air under diaphragm

Impression:

Plan: Analgesia and antiemetic as required. Consider IV fluids if unable to tolerate oral. Consider abdominal CT for ischaemic bowel. Collect urine and stool samples when available for C&S.

Amy Fulton, GPST1

Update 20:22 - Bloods NAD aside from elevated WBC. Likely gastroenteritis. Safe for discharge home and to continue with dalteparin. Should bleeding persist or worsen,

sould he be unable to tolerate food or fluids, to reseek medical attention.

Yours Sincerely,

Amy Fulton, Doctor

NHS Lothian

Specialty:	Plastic Surgery	**Consultant:**	Mr Stuart Andrew Hamilton

Diagnosis:
Two weeks post-op scapholunate ligament

Management today:
Removal of sutures, re-plaster.

Plan:
Admit in six weeks time for removal of K-wires on Cepod 4.11.13 morning list.

I reviewed Mr MacIntyre today. His wounds look clean, healthy and dry. The sutures have been removed. He has been replaced into a forearm cast and this will remain on for a further six weeks at which time it will be time to remove his K-wires. This will be done in theatre, hopefully under local anaesthetic. He will need to come to the day case unit on that morning. Following removal of the wires we will leave him free and we will start mobilising his wrist which will be understandably very stiff at that time. I will let you know how he gets on.

Kind regards,
Yours sincerely

CLAIRE SIMPSON, FRCS (Orth) Dip Hand Surg

Specialty:	Ear Nose and Throat	**Consultant:**	Mr Iain F Hathorn

Thank you for referring Mr MacIntyre to the ENT clinic. He is a 32-year-old gentleman who describes multiple nasal injuries and nasal fractures in the past. His last injury was a year ago. He has never had any surgical intervention in the past for his nose. He complains of left sided nasal obstruction and is also unhappy with the appearance of his nose. He is a smoker of 30-cigarettes per day and also has drunk alcohol to excess previously. He tells me that he is drinking around 20-units per week currently. He has a past history of depression and is currently in Dosulepin and Quetiapine.

On examination his nasal bones were obviously deviated to the right side. He had poor tip support and his anterior nasal septum was deviated to the left side.

He does have a significant deviation of his septum and nasal bones. To correct this he may require open septorhinoplasty. I discussed the option of surgery with him today which he is keen to pursue. I have suggested that he needs to reduce and stop smoking and also ensure that his alcohol intake is under control prior to consideration of surgery. I have provided him with an information leaflet regarding septorhinoplasty surgery. I will arrange for clinical photographs to be taken and I will review him back in clinic with these in a few months to discuss things further.

Yours sincerely

Diagnosis: Seven months post scapho lunate ligament repair right wrist. More recent injury right base 5th metacarpal several weeks ago.

Management plan: See three months with x-ray on arrival right wrist.

This gentleman turned up in clinic today after having lost attendance for several months. It would appear that all is going well with his wrist although we have got no radiological evidence of this in clinic today. He has got good range of movement of his wrist without any pain. He did bring our attention to a new injury at the base of his 5th metacarpal which seems to be several weeks old now which is likely to be a fracture.

I have suggested that we leave this alone for the present time but he mobilises as pain allows and we attend to any chronic problems should they arise.

Kind regards,
Yours sincerely

I was due to reviewed Mr MacIntyre back in the ENT clinic today for consideration of possible open septorhinoplasty. I had advised him to reduce his smoking and alcohol intake prior to consideration of surgery. Unfortunately he did not attend the appointment today.

I have not arranged for a further appointment to be sent out. If he wishes to discuss the surgery and he has reduced his alcohol intake and stopped smoking please re-refer him and I would be happy to review him again.

Yours sincerely

Op note 24.05.18.

Diagnosis:
Abscess right arm.

Operation:
Incision and drainage abscess right arm.

Pre-operative note:
Consent was reconfirmed this afternoon. I have warned him of the risks, benefits and side-effects of such an undertaking. He was happy to proceed.

Surgeon: Mr. Clement.
Anaesthetist: Dr. Nimmo.
Anaesthetic: GA.

Patient positioned supine and the arm placed on an arm board. No tourniquet used. The right arm was prepped and draped in a standard fashion. The abscess was pointing over the anterior aspect of the distal biceps. An elliptical incision was made here and marked pus was expressed. The cavity was both superficial to the fascia and deep. There was a cavity approximately 5x5cm superficial and a little smaller deep to the fascia. Curettage was used superficial to the fascia and washing was performed in both compartments. All pus expressed. Washed out with 3L of normal saline. A tacking suture was placed to hold the skin edges together but not formally closed. Dressings were applied. Neurovascularly intact at end of procedure.

Plan:
Wound review tomorrow morning. If it looks quiet can be converted over to oral antibiotics and allowed home later that day before removal of suture in 7 days. No formal orthopaedic follow-up required.

I am sorry you were unable to attend the respiratory clinic on 28th May 2019.

Following your recent admission with pneumonia. I think it would be helpful for you to have a repeat chest x-ray to ensure that the previous changes have fully resolved. This has already been requested for you.

It would be possible for you to attend for this at the Western General Hospital X-ray Department Monday to Friday between 9am and 4pm.

Yours sincerely

Electronically Signed and Verified by Dr Thetford

Dalteparin counselling given, alert card completed and explained plus sharps box dispensed. The first 2 boxes of 15,00 units of dalteparin prescribed and dispensed. Injection technique explained and I observed Tommy using a syringe and stress ball to practice this, no issues noted. I advised Tommy to move the injection site around with each injection.

Specialty:	Ambulatory Care	**Consultant:**	Ambulatory Care Registrar

Date of clinic appointment: 06/04/21

Diagnosis:
- provoked extensive right leg DVT (ext iliac to SFV), IVDU
- No PE symptoms

Brief outline of issue:
39YM, states had one off incident of IVDU one week ago
Father passed away 1/12 ago
Swelling right leg, treated with antibiotics last week
Progressively worsening swelling

No PE symptoms
No personal or FHx VTE

Observations including weight : 182.5cm, wt 78kg

Examination findings:
Left calf 35cm, right calf 39.2cm congested, pulses normal

Allergies: NKDA

Investigations carried out and results:
Us doppler right leg -Deep vein thrombosis within the right common femoral vein down to the distal right superficial femoral vein.
This extends proximally into the right external iliac vein.
Doppler flow is demonstrated within the IVC.
The right popliteal vein shows normal compressibility and flow on augmentation.
Enlarged right inguinal lymph nodes which are likely reactive in nature.

Date First Created: 06/04/2021
Date/Time Printed: 12/06/2026 09:14
Our Ref: 700576136V
CHI: 0407813233

Opinion:
Acute right leg DVT confirmed.

Treatment started (specify medication and planned duration): Dalteparin 15,000 units s/c daily (x 10 supplied today), sharps box for safe disposal. Minimum 6 weeks treatment, if no longer active IVDU can have gen med outpt review and 3/12 treatment.

Medication stopped or changed (name, dose, frequency and duration): Nil

Follow up arranged: Ambulatory care 1 week

Referrals to any other specialties: Nil

Pending results or investigations: Nil

Action for patient (in terms of self care, smoking cessation, worsening advice and medication side effect advice): Advised strongly re PE symptoms. Large volume fresh clot in leg, high risk for PE in first 6 weeks. Gentle walking only. elevate right leg when seated. Mobility will be greatly reduced by pain, analgesia not effective as is dependant so ELEVATE limb.

Any action for GP: Please prescribe dalteparin as above for min 6 weeks.

Yours sincerely

Date of clinic appointment: 14/04/21

Diagnosis:
- provoked extensive right leg DVT, IVDU x1

Brief outline of issue:
39YM, 1 week follow up
Managing dalteparin injections without adverse effects
No abnormal bleeding and bruising

Has been unwell with viral gastroenteritis past 1 week, now feeling better
No drop in platelets

Flitting arthralgia (hands, elbows ball of right foot) now settling
No headache
Eating more now
PU regular

No PE symptoms

Examination findings:
Right leg swelling improved, less congested
Collateral veins now opening up throughout whole right leg esp lateral thigh
NV intact

Injection sites on abdo normal
No rash

Allergies: NKDA
Investigations carried out and results: Nil

Presenting concern: Hepatitis C infection, failed to engage with BBV team

Thomas was diagnosed with a Hepatitis C infection in February 2025. HE was referred to the BBV team and we have attempted to engage with him via our outreach clinic at the NE recovery hub in Leith. Unfortunately Thomas has failed to attend the appointments we have offered him and we have not been able to reach him on the phone since our initial telephone consultation.

We will not offer any further appointments for Thomas at this time, however he is welcome to be re-referred or self refer to the BBV team at any time.

Please do not hesitate to contact us should you have any queries.

Kind regards,
Jess Ryan (she/her)

Many thanks for your referral regarding Mr MacIntyre to the Soft Tissue Knee clinic. His case has been reviewed by a clinician. As mentioned in your referral that he has had a recent knee x-ray that showed no obvious bony explanation but the only and x-ray that was able to be a seen on the PACS system was an x-ray in 2021 of the right knee that showed no abnormalities.

It was also mentioned that Mr MacIntyre had been referred for physiotherapy but after failing to attend for his first appointment a further appointment will be arranged. It is most appropriate in the first instance that forms of conservative measures are undertaken. If following physiotherapy assessment it is deemed that Orthopaedic intervention would be more appropriate he could be re-referred at this time.

In view of the above information his name has been removed from the Orthopaedic waiting list at this time.

Please do not hesitate to contact us if you wish to discuss this further.

Kind regards

Orthopaedic Knee Triage Team

Have you changed position since last CR?	Y	Y											
Positioning (R) or (L) side (B) Back (C) Chair	B	B											
Mattress type / Cushion type	*please state type:*												
Elimination — Do you need the toilet?	N	AB											
Is the patient continent of urine? (at time of Care Rounding)	Y	Y											
Continence product changed/offered?	N/A	N/A											
Catheter care performed?	N/A	N/A											
Catheter bundle updated daily position catheter below the bladder / no more than 2/3 full with connections intact													
Is patient continent of faeces? (at time of Care Rounding)	Y	Y											
Bowel function monitored	Observe bowel function and update daily												
Food, Fluid & Nutrition — Would you like a drink? Ensure fluids are within easy reach	W	W											
Fluid Balance Chart (if clinically indicated)	N	N											
When did you last eat?	B/B	B/B											
(B) Breakfast (L) Lunch (D) Dinner (S) Snack (NBM) Nil by Mouth (A) Assistance Update Food Chart if required													
Oral Hygiene Performed (ref to risk assessment)	N	N											
Falls — Appropriate Footwear?	Y	Y											
Walking aid available(and within reach)	N/A	N/A											
Area de-cluttered?	N	N											
Chair and bed height assessed?	Y	Y											
Falls alarm in use and attached?	N	N											
Glasses available for use? (if worn) Hearing aid available for use? (if worn)	N	N											
Requires close observation for commode, toilet, bathing or showering Y ☐ N ☐													
Pain — Are you in pain?	N	AB											
Analgesia Given?	N	AB											
General — Peripheral Venous Cannula observed?	Y x2	Y											
Observe for signs of inflammation/swelling at every CR session. **Bundle/VIP score to be updated daily**													
Are you comfortable? Y/N	Y	AB											
Anything else I can do for you?	N	AB											
Buzzer within easy reach	N/A	N/A											
Personal Care *Type* _____ *(specify)* **Time Given** _____													
Initials = document at time of care delivery	∞	∞											

MAU

Ward: [illegible] Site: WGH Date: 15/3/19

This care rounding document should be used in non-acute areas and should be supported by an additional person-centred care plan. Registered Nurses should use clinical judgement based on risk assessment, clinical condition and essential care needs to plan frequency.

OTHER MEDICINE CHARTS IN USE		PREVIOUS ADVERSE REACTIONS This section must be completed before any medicine is given		Completed by (sign & print)	Date
Date	Type of Chart	None known ☐		[signature]	14/3
		Medicine / Agent	Description of reaction		

- Write clearly in block capitals, using a black ballpoint pen
- Use approved names for medicines
- Never alter a prescription
- Route of administration
  The only acceptable abbreviations are:

IV	- intravenous	SL	- sublingual	NG	- nasogastric
IM	- intramuscular	PR	- per rectum	ID	- intradermal
SC	- subcutaneous	PV	- per vagina	TDP	- topical
INHAL	- inhaled	NEB	- nebulised		

Never abbreviate ORAL or INTRATHECAL
Specify RIGHT or LEFT for eye and ear preparations

- Write the medicine dose clearly
  - The only acceptable abbreviations are:
    g - gram mg - milligram ml - millilitre
    all other doses must be written out in full eg. micrograms
  - Avoid decimal points eg. 100 micrograms (not 0.1mg). If unavoidable, write zero in front of the decimal point
  - Prescribe liquids by writing the dose in mg
  - For 'as required' medicines, state the symptoms to be relieved, the minimum time interval between doses and the maximum daily dose
  - Write units as 'units' not 'iu'

ONCE ONLY

Date	Time	Medicine (Approved Name)	Dose	Route	Prescriber - Sign + Print	Time Given	Given By

CODES FOR NON-ADMINISTRATION OF PRESCRIBED MEDICINE

If a dose is not administered as prescribed, initial and enter a code in the column with a circle drawn round the code according to the reason as shown below. Inform the responsible doctor in the appropriate timescale.

1. Patient refuses
2. Patient not present
3. Medicines not available - CHECK ORDERED
4. Asleep / drowsy
5. Administration route not available - CHECK FOR ALTERNATIVE
6. Vomiting / nausea
7. Time varied on doctor's instructions
8. Once only / as required medicine given
9. Dose withheld on doctor's instructions
10. Possible adverse reaction / side effect

Oxygen Prescribing for Acute Admissions

PRESCRIBER: Circle appropriate target range, date and sign.

NURSE: Sign at drug rounds four times daily. This indicates administration has been reviewed and either patient is within target range **OR** adjustments are being made.

For patients outside target range Nurse should adjust oxygen and recheck Saturations within 10 minutes. Document all changes to oxygen administration on **NEWS chart**.

NEWS of 5 or more?

Think Sepsis!

In a patient with a **NEWS** of **5 or more** and a known infection, signs and symptoms of infection, or at risk of infection, think **'Could this be sepsis?'** and **escalate care immediately.**

Special Instructions:
Only to be completed under the direction of a senior member of the medical team

A total NEWS of _____ or individual parameter of _____
is acceptable for this patient because _____

Please escalate if _____

Print _____ Sign _____ Designation _____
Date _____ Time _____ *(only valid if signed and dated)*

***Regardless of NEWS always Escalate if concerned about a patient's condition. Escalate immediately if clinical observations cannot be obtained**

NEWS TOTAL	Monitoring Frequency	Clinical Response Document concerns/decisions in patients clinical notes
0	Minimum 12 hourly/ 4 hourly in admission areas	• continue routine NEWS monitoring
Total 1 - 4	Minimum 4-6 hourly	• inform registered nurse • registered nurse assessment • review frequency of observations • if ongoing concern, escalate to medical team • consider fluid balance chart
3 in single parameter	Minimum 1 hourly	• registered nurse assessment • medical assessment • management plan to be discussed with senior trainee or above • consider fluid balance chart
Total 5 - 6 Urgent response threshold	Minimum 1 hourly	• registered nurse assessment • urgent medical assessment • management plan to be discussed with senior trainee or above • consider senior trainee review if NEWS does not improve following initial medical assessment • consider level of monitoring required • consider anticipatory care planning (ACP) • start fluid balance chart
Total 7 or more Emergency response threshold	Continuous monitoring of vital signs	• registered nurse to assess immediately • immediate assessment by senior trainee or above • discuss with supervising consultant • if appropriate contact Critical Care for review • consider anticipatory care planning (ACP) • start fluid balance chart

Codes for recording oxygen delivery on the NEWS2 observations chart

A	breathing air	RM	reservoir mask
N	nasal cannula (document in litres)	TM	tracheostomy mask
SM	simple mask	CP	CPAP mask
V	venturi mask and percentage (e.g device = V, % = 40)	H	humidified oxygen and percentage (e.g device = H, L/min or % = 40)
NIV	patient on NIV system	OTH	Other specify

REMEMBER
- **Record all observations** on NEWS2 chart
- **Document concerns/decisions in clinical notes**
- **Escalate** your frequency of observations
- If at any point during your assessment you are concerned about your patient - **CALL FOR HELP**

	Assess	Possible Actions
AIRWAY	Is the airway - • patent • at risk • obstructed	• suction if indicated • head tilt, chin lift / jaw thrust • airway adjuncts • administer oxygen • call 2222 if at risk
BREATHING	• respiratory rate • SpO_2 • accessory muscle use • noises +/- percussion, palpation & auscultation • position / posture	• administer prescribed oxygen to maintain saturations 94-98% (NB COPD 88-92%) • monitor SpO_2 / ABGs • consider chest x-ray • treat underlying cause • call 2222 if not breathing
CIRCULATION	• pulse • blood pressure • capillary refill time • core temperature / colour • urine output • consider 4 body cavities for fluid & blood loss (4 + on the floor) • monitor drain losses	• obtain IV access • obtain blood samples • prepare fluid challenge • initiate fluid balance chart • call 2222 if no circulation • consider initiating major haemorrhage protocol • monitor response to actions
DISABILITY A = Alert V = Voice / Verbal P = Pain U = Unresponsive	• AVPU for initial assessment • GCS, on-going neuro assessment • ABC's & treat hypoxia or hypovolaemia • blood glucose • drugs	• re-assess GCS • check blood glucose if less than 4mmols/litre activate hypoglycaemia protocol • check drug chart • remember accurate documentation
EXPOSURE	• top to toe examination • look for evidence of blood loss / rashes / drains / wounds etc	• control bleeding • treat any underlying conditions identified • reassess • maintain patient's dignity • evaluate actions

Pain and Symptom Assessment and Management

Supportive care - pain: Always score worst pain in the last 24 hours or since last assessment. If the patient has deteriorating health with limited reversibility, refer to **Scottish Palliative Care Guidelines**

Acute Pain: Score current pain on movement, e.g. deep breathing. Refer to **Acute Pain Guidelines**

Persistent pain - 6 or above which distresses the patient and is unresponsive to guidelines

Dear Dr MacCallum

Discharge Drugs

Discharge Medication	Dose	Frequency	Duration	Additional Info
Paracetamol Tablets	1000 MG	Every FOUR to SIX hours PRN. Max 4	Short Term	64 tabs
Ibuprofen Tablets	400 MG	Every SIX to EIGHT hours PRN. Max 3	Short Term	23 tabs
Dihydrocodeine Tablets	30 MG	Every FOUR to SIX hours PRN. Max 4	Short Term	30 tabs
Gabapentin Capsules	300 MG	THREE times DAILY	Long Term	40 caps
Quetiapine Tablets	50 MG	In the MORNING	Long Term	57x 25mg tabs
Quetiapine Tablets	25 MG	At NIGHT	Long Term	57x 25mg tabs
Dosulepin Capsules	225 MG	At NIGHT	Long Term	57x 75mg tabs
Co-Amoxiclav Tablets 625mg	1 TABLET	THREE times DAILY	7 Days	21 tabs
Senna Tablets	15 MG	At NIGHT	Short Term	20 tabs

DIAGNOSIS:
1. Laceration to right forearm with loss of soft tissue.
2. Right perilunate dislocation

PROCEDURE:

1. Right forearm wound washout x2 - not closed.
2. Closed reduction of right perilunate dislocation

32 year old male sustained deep puncture wound to right forearm when jumping off of a five foot wall and catching his arm on the spike at the top. 3cm x 5cm soft tissue deficit. Taken to theatre same day.

Post operatively lunate appears to remain unstable in the extremis of extension and radial deviation.

TREATMENT
Above operation
Analgesia
IV antibiotics - co-amox

FUTURE INVESTIGATIONS AND FOLLOW-UP BEING ARRANGED BY HOSPITAL
To present to Ward 18 (Plastics) day room at SJH at 08:00hr on Tuesday 27/08/13 having fasted from midnight.

CHANGES TO DRUGS SINCE ADMISSION
Commenced on co-amoxiclav.
Analgesia

PREVIOUS ADVERSE DRUG REACTIONS

PRINCIPAL DIAGNOSIS/PROCEDURE
Right arm abscess
Incision + drainage on 24/5/18

TREATMENT
This 36 year old gentleman presented to RIE with a red and swollen upper right arm - this was clinically felt to be an abscess and Mr MacIntyre was admitted under orthopaedics. He underwent an incision + drainage of this aspirate on 24/5/18 without complication. He is to complete a 10 day course of co-amoxiclav in the community. No orthopaedic follow-up is required.

FUTURE INVESTIGATIONS AND FOLLOW-UP BEING ARRANGED BY HOSPITAL
No routine follow-up required

Removal of stitch 7 days post-op in community
Culture result awaiting - provisional result of Gram positive cocci

CHANGES TO DRUGS SINCE ADMISSION
Commenced:
paracetamol, 1g PRN max QDS
co-amoxiclav, 625mg TDS for 10 days

ALLERGIES / ADVERSE DRUG REACTIONS
NKDA

Should you need further information please contact Mr Brown's team, Ward 109, RIE

Information contained in this letter has been discussed with the patient/carer.

Quetiapine Tablets	150 MG	TWICE DAILY	Long Term	own

PRINCIPAL DIAGNOSIS/PROCEDURE
Community Acquired Pneumonia

TREATMENT
Thomas presented to the Western General on 14th March with a 3 day history of shortness of breath, left sided pleuritic chest pain and cough with some haemoptysis. This was investigated with blood tests showing elevated inflammatory markers and a chest x-ray showing left lung opacification. He was therefore treated for a community acquired pneumonia with antibiotics and had low saturations requiring some oxygen.

He was later transferred to Ward 54 for his ongoing care. Given his history of haemoptysis and slightly low saturations a CTPA was requested and this confirmed the diagnosis of community acquired pneumonia and excluded PE.

He now feels better in himself and his observations have been stable. He has therefore been deemed fit for discharge with antibiotics to finish at home.

FUTURE INVESTIGATIONS AND FOLLOW-UP BEING ARRANGED BY HOSPITAL
Outpatient clinic and repeat chest x-ray with Dr Thetford (May)

CHANGES TO DRUGS SINCE ADMISSION
Short course of Amoxicillin
Short course of Clarithromycin

ALLERGIES / ADVERSE DRUG REACTIONS
No known drug allergies

SIGNIFICANT CHANGES MADE TO CARE ARRANGEMENTS
Nil

CHANGES TO DNACPR STATUS OR ANTICIPATORY CARE PLANNING
Nil

CONSULTANT COMMENTS
I can confirm this is an accurate reflection of this gentleman's admission. I will see him back in my clinic in May.

Yours sincerely

Electronically Signed and Verified by Dr Thetford

Outpatient Clinic Letter Episode/Ref: I0003269217 Mr Stuart Andrew Hamilton 27/09/2013 11:49 Linda McCulloch	Diagnosis: ,Two weeks post-op scapholunate ligament ,,Management today:,Removal of sutures, re-plaster. ,,Plan: ,Admit in six weeks time for removal of K-wires on Cepod 4.11.13 morning list. ,,I reviewed Mr MacIntyre today. His wounds look clean, healthy and dry. The sutures have been removed. He has been replaced into a forearm cast and this will remain on for a further six weeks at which time it will be time to remove his K-wires. This will be done in theatre, hopefully under local anaesthetic. He will need to come to the day case unit on that morning. Following removal of the wires we will leave him free and we will start mobilising his wrist which will be understandably very stiff at that time. I will let you know how he gets on. ,,Kind regards, ,Yours sincerely,,,,CLAIRE SIMPSON, FRCS (Orth) Dip Hand Surg,Consultant Hand & Wrist Surgeon,,c.c.,Miss Phillipa Rust ,Consultant Hand Surgeon ,St John's Hospital,Livingston ,EH54 6PP,

Outpatient Clinic Letter Episode/Ref: I0003314311 Miss Claire K Simpson 13/05/2014 15:18 Valerie Will	Diagnosis: Seven months post scapho lunate ligament repair right wrist. More recent injury right base 5th metacarpal several weeks ago.,,Management plan: See three months with x-ray on arrival right wrist.,,This gentleman turned up in clinic today after having lost attendance for several months. It would appear that all is going well with his wrist although we have got no radiological evidence of this in clinic today. He has got good range of movement of his wrist without any pain. He did bring our attention to a new injury at the base of his 5th metacarpal which seems to be several weeks old now which is likely to be a fracture.,,I have suggested that we leave this alone for the present time but he mobilises as pain allows and we attend to any chronic problems should they arise.,,Kind regards,,Yours sincerely,,,,CLAIRE SIMPSON, FRCS (Orth) Dip Hand Surg,Consultant Hand & Wrist Surgeon,

Outpatient Clinic Letter Episode/Ref: I0004469603 Mr Iain DM Brown 25/05/2018 14:17 Megan Blyth	Op note 24.05.18.,,Diagnosis: ,Abscess right arm. ,,Operation: ,Incision and drainage abscess right arm. ,,Pre-operative note: ,Consent was reconfirmed this afternoon. I have warned him of the risks, benefits and side-effects of such an undertaking. He was happy to proceed.,,Surgeon: Mr. Clement. ,Anaesthetist: Dr. Nimmo. ,Anaesthetic: GA. ,,Patient positioned supine and the arm placed on an arm board. No tourniquet used. The right arm was prepped and draped in a standard fashion. The abscess was pointing over the anterior aspect of the distal biceps. An elliptical incision was made here and marked pus was expressed. The cavity was both superficial to the fascia and deep. There was a cavity approximately 5x5cm superficial and a little smaller deep to the fascia. Curettage was used superficial to the fascia and washing was performed in both compartments. All pus expressed. Washed out with 3L of normal saline. A tacking suture was placed to hold the skin edges together but not formally closed. Dressings were applied. Neurovascularly intact at end of procedure. ,,Plan: ,Wound review tomorrow morning. If it looks quiet can be converted over to oral antibiotics and allowed home later that day before removal of suture in 7 days. No formal orthopaedic follow-up required.,,NC/MB,

Ward Round Episode/Ref: I0004469603 Ms Chloe EH Scott 24/05/2018 11:28 Caroline Jane Darling	Date : 24/05/2018,Ward Round Lead : Mr Iain DM Brown,,,Ward Round Note : Mr MacIntyre has an anterior abscess to his right upper arm. It is just above his elbow but not in the joint. He injected a couple of weeks ago. The ST Dr MacLeod had taken some pus out which seems to have done quite a lot of the job. It might be reasonable just to give it a good washout in theatre however to get him better quickly. He is currently well and there is a possibility he could be cancelled due to other clinical priorities. I have made him aware of this and given him breakfast this morning. IDMB/cjs,

Inpatient Discharge Summary Episode/Ref: I0004665673 Dr David EA Thetford 17/03/2019 12:14 Dr Nicolas Simmers	PRINCIPAL DIAGNOSIS/PROCEDURE,Community Acquired Pneumonia,,TREATMENT,Thomas presented to WGH on 14/03/19 with a 3 day history of SOB, left sided pleuritic chest pain and cough with some haemoptysis. This was investigated with blood tests showing elevated inflammatory markers and a chest xray showing left lung opacification. He was therefore treated for a CAP with antibiotics and had low saturations requiring some oxygen.,He was later transferred to Ward 54 for his ongoing care. Given his history of haemoptysis and slightly low saturations a CTPA was requested and this confirmed the diagnosis of CAP and excluded PE.,He now feels better in himself and his observations have been stable. He has therefore been deemed fit for discharge with antibiotics to finish at home.,,FUTURE INVESTIGATIONS AND FOLLOW-UP BEING ARRANGED BY HOSPITAL,- outpatient clinic and repeat chest xray with Dr Thetford ,,CHANGES TO DRUGS SINCE ADMISSION,- short course of amoxicillin,- short course of clarithromycin,,ALLERGIES / ADVERSE DRUG REACTIONS,- NKDA,,SIGNIFICANT CHANGES MADE TO CARE ARRANGEMENTS,- Nil,,CHANGES TO DNACPR STATUS OR ANTICIPATORY CARE PLANNING ,- Nil,,GP to please consider the following - thank you for your ongoing care, ,Should you need further information please contact - Dr Thetford's Team, Respiratory Medicine, Ward 54, WGH, ,Information contained in this letter has been discussed with the patient/carer.,,Yours sincerely....., ,Staff Signature..... Progress Notes Episode/Ref: I0005185333 Dr David R McKean 05/04/2021 23:16 Dr Simon AS Gatt	**Radiology provisional report. Consultant verified report will be available within 24 hours.** Pre-contrast and arterial phase CT scan extending from the pelvis to the mid thigh region. Extensive inflammatory stranding is demonstrated within the subcutaneous tissues of the right groin but also within the anterior intramuscular compartment of the right thigh. No evidence of pseudoaneurysm formation is seen, with normal opacification of the femoral arteries. Despite no contrast being seen within the veins at the time of scanning, the right femoral vein appears distended throughout its length within the visualised right thigh with most of the aforementioned inflammatory stranding also noted to being centred around it - findings are highly suggestive of thrombosis. A superficial vein along the antero-medial aspect of the right thigh also appears swollen with surrounding inflammatory stranding, possibly in keeping with an associated superficial thrombophlebitis. No discrete collections are demonstrated throughout the visualised right bullae. Extensive right pelvic sidewall and groin lymphadenopathy is seen, likely reactive. No other abnormalities throughout the visualised pelvis. No suspicious bone lesions. Impression: 1) No pseudoaneurysm or collections of the right groin. 2) No venous contrast phase images available. Distended right femoral vein with surrounding inflammatory stranding is highly suggestive of deep venous thrombosis. A duplex ultrasound will be helpful in confirming the diagnosis if any clinical doubt persists. Caring clinicians informed at 23:10. __ Dr Simon Gatt. GMC: 7784414 Radiology Registrar Simon.Gatt@nhslothian.scot.nhs.uk

CLINICAL INFORMATION

Reason for Referral: Old Nasal fractures with marked septal deviation

Main Referral Text:

Dear Doctor,

This 32- year old man has a history of, by the looks of things, quite a few nasal fractures. His septum is deviated markedly to the left and he has almost no L nostril patency. He has asked to be referred for a discussion about the possible benefits of surgical intervention.

Thanks for seeing him

Yours sincerely

Dr Richard Smith

CLINICAL INFORMATION

Reason for Referral: crp 210. haemoptysis, shortness of breath, left chest pain

Main Referral Text: please can you see this man who is on methadone and also injects heroin. he was seen by a colleague 2 days ago with left sided chest pain , cough and phlegm with blood. he was sent for bloods and given amox but does not feel better. he has blood in phlegm daily, sometimes more than teaspoons, ongoing left sided chest pains. feels sob on exertion and fatigued. he had some right chest pain yesterday but this settled. he also has frequency, and hesitancy. his crp has come back at 210.
oe pale, temp 36.0 sat 85-87% (was 95% when seen two days ago,) pulse 100 reg
chest clear, tender ribs at axilla left side
hs normal, soft abd sl tender right if area, bs present
he has had little improvement on amox and I am worried re his ongoing symptoms with high crp.
he last injected heroin last weekend into the right arm

many thanks

dr s allan

CLINICAL INFORMATION

Reason for Referral: New Hep C result

Main Referral Text: Dear team, this 43y old man has picked up Hep C. I have broken the news to him. he isn't sure when he picked this up. IVDU over the years; a lot 4y ago. now rarely. denes sharing equipment. This seems like the likely source.

He has lost a lot of weight which I believe could be linked, but I am working him up in case there is an alternate cause for that.

I have arranged a confirmation sample (but he has not attended for it yet).
He is happy and keen for referral nd potential treatment.

yours sincerely

Dr J Davidson
GP

CLINICAL INFORMATION

Reason for Referral: knee pain and giving way

Main Referral Text: dear colleagues, thank you for seeing Thomas who has had knee pain on and off since an accident in 2010 when it was hit with a hammer. He has had increasing trouble with the knee over the past months and it started making a loud clicking noise on flexing and extending several months ago. the knees is sore still and now started giving way, the loud click on flexing seems to be getting worse and has stumbled several times, He has complex mental health issues and didnt manage to get to physio appt, but they have agreed to rearrange this and he is waiting for new one, I wonder if there is a meniscal component to his problems and would be glad of your input.
his recent xray shows no obvious bony explanation

		Date of Birth:	04/07/1981
Clinic Code:		**Attendance Date:**	
Specialty:	Orthopaedics		
Consultant:	Mr Iain DM Brown		

Dear Dr Hepple,

Op note 24.05.18.

Diagnosis:
Abscess right arm.

Operation:
Incision and drainage abscess right arm.

Pre-operative note:
Consent was reconfirmed this afternoon. I have warned him of the risks, benefits and side-effects of such an undertaking. He was happy to proceed.

Surgeon: Mr. Clement.
Anaesthetist: Dr. Nimmo.
Anaesthetic: GA.

Patient positioned supine and the arm placed on an arm board. No tourniquet used. The right arm was prepped and draped in a standard fashion. The abscess was pointing over the anterior aspect of the distal biceps. An elliptical incision was made here and marked pus was expressed. The cavity was both superficial to the fascia and deep. There was a cavity approximately 5x5cm superficial and a little smaller deep to the fascia. Curettage was used superficial to the fascia and washing was performed in both compartments. All pus expressed. Washed out with 3L of normal saline. A tacking suture was placed to hold the skin edges together but not formally closed. Dressings were applied. Neurovascularly intact at end of procedure.

Royal Infirmary of Edinburgh
51 Little France Crescent
Old Dalkeith Road
Edinburgh EH16 4SA

NHS Lothian

Cont'd... **Ref:** 700576136V **Patient Name:** Mr Thomas MacIntyre

Plan:
Wound review tomorrow morning. If it looks quiet can be converted over to oral antibiotics and allowed home later that day before removal of suture in 7 days. No formal orthopaedic follow-up required.

Inpatient Discharge Summary

DIAGNOSIS:
1. Laceration to right forearm with loss of soft tissue.
2. Right perilunate dislocation

PROCEDURE:
1. Right forearm wound washout x2 - not closed.
2. Closed reduction of right perilunate dislocation

32 year old male sustained deep puncture wound to right forearm when jumping off of a five foot wall and catching his arm on the spike at the top. 3cm x 5cm soft tissue deficit. Taken to theatre same day.

Post operatively lunate appears to remain unstable in the extremis of extension and radial deviation.

TREATMENT
Above operation
Analgesia
IV antibiotics - co-amox

FUTURE INVESTIGATIONS AND FOLLOW-UP BEING ARRANGED BY HOSPITAL
To present to Ward 18 (Plastics) day room at SJH at 08:00hr on Tuesday 27/08/13 having fasted from midnight.

CHANGES TO DRUGS SINCE ADMISSION
Commenced on co-amoxiclav.
Analgesia

Right Soft Tissue Injury, Not Otherwise Specified

Planned Procedure(s): Right Carpal Fracture / Dislocation ORIF
Right Wound Debridement

Social Status: Lives Independently
Co Morbidities:

Admission Information

0407813233

ST3 Ortho

32 y/o gentleman presented having fallen from a 6 foot high fence. Penetrating injury to right midforearm. In attempt to prevent further penetration he got his right wrist caught in between the railings. No other injuries. Conscious throughout.

Background
No cardiorespiratory co-morbidities
Previous GA for left wrist arthroscopy
NKDA
Psychosis and depression.
Last ate 1200 and last drank 1500.

O/E
Right forearm wound mid-forearm. ~5cm2 area of skin. Visible muscle flexor muscle bellies. Median, ulna and radial nerves intact. Pulses present. CRT <2s.

Plain radiographs
Right perilunate dislocation.

Plan
IV co-amoxiclav 1.2 grams
IV fluids

Keep fasted, mark and consent for wound debridement, exploration , washout plus open reduction +/- internal fixation of carpus

Care Provider:

SEX: Male

Date of Operation: 21/08/2013
Consultant:

Staff:	**Role:**
Dr Benedict Waterson	Surgeon

Diagnosis:
Procedures:

Operation Note:

Diagnosis
Right perilunate dislocation and two separate open wounds to flexor surface of right forearm

OPERATION

Surgeon Mr B Waterson
Anaes Dr V Humphries

Procedure
Patient supine. GA augmented in A&E. Routine prep and drape. Arm on the arm table. The perilunate dislocation was reduced with longitudinal traction followed by flexion and then extension. Position was checked on I.I. and deemed acceptable. Tourniquet was then applied to 250 mm mercury. The first wound to be addressed was 5x5 cm overlying brachio-radialis. There was an incision wound through the belly of brachio-radialis and some laceration injury to pronator teres. A superficial vein had been divided, but there was no evidence of injury to nerves or arteries. This wound communicated with a 5 cm incision wound overlying the proximal third of flexor carpi ulnaris. Again there was some laceration injury to the belly of flexor carpi ulnaris and flexor carpi radialis, but no damage to neurovascular structures. Both wounds were thoroughly irrigated with 3 litres of normal saline. Ragged wound edges were debrided. The wound overlying brachio-radialis, the fascia was closed with 2/0 Vicryl, then the ulna and proximal ends of the wound were apposed with 3/0 Ethilon, leaving a 3x3 cm open deficit. The wound over flexor carpi ulnaris was closed with 2/0 Vicryl followed by 3/0 Ethilon. These wounds were then covered with Mepore and blue swabs.

Attention was then turned back to the hand. On further screening it was noted that the carpus had again fallen into a position of perilunate dislocation. This was again reduced with traction, flexion

and extension. It was then screened through a full range of motion and deemed stable to immobilise in a backslab in a neutral position. The position was checked and confirmed with the image intensifier. A below elbow POP was applied.

Post-operative instructions
Analgesia
Continue IV Augmentin for 48 hours.
Inform Plastic Surgeons in the morning that the 3x3 defect over the flexor surface will require skin graft.
The patient will require referral to a Hand Surgeon for definitive fixation of the scapho-lunate ligament.

BEN WATERSON/RH

Orthopaedics Ward Note

Consultant: Miss Leela C Biant

Date: 22/08/2013

Doctor:	Time:	Note:
Miss Leela C Biant	11:17:00	Mr McIntyre is not available on the ward for review this morning. He has gone off the ward. Mr McIntyre was climbing over a 6 foot fence yesterday. He impaled his right forearm on the a spike. He twisted it to try and get it off, and sustained a closed perilunate dislocation. He went to theatre yesterday. The perilunate dislocation was reduced closed and was found to be reasonably stable. His wound was debrided. He will require a second look and possible skin graft of his forearm and also somebody to address his scapholunate ligament reconstruction. We think this will probably be best done over at St Johns and we will refer him over this morning.

CODES FOR NON-ADMINISTRATION OF PRESCRIBED MEDICINE

If a dose is not administered as prescribed, initial and enter a code in the column with a circle drawn round the code according to the reason as shown below. Inform the responsible doctor in the appropriate timescale.

1. Patient refuses
2. Patient not present
3. Medicines not available - CHECK ORDERED
4. Asleep / drowsy
5. Administration route not available - CHECK FOR ALTERNATIVE
6. Vomiting / nausea
7. Time varied on doctor's instructions
8. Once only / as required medicine given
9. Dose withheld on doctor's instructions
10. Possible adverse reaction / side effect

Medical Students

Tick relevant box	YES	NO
I agree to allow students to be present in theatre:		
I agree to be examined by a medical student whilst under general anaesthesia:		

To the patient (or Parent or Guardian if appropriate)

1. **Please read this form and the notes overleaf very carefully.**
2. **If there is anything that you don't understand about the explanation or if you want more information, you should ask the practitioner before signing.**
3. **Please check that all the information on the form is correct. If it is and you understand the explanation, then sign the form.**

I am the patient / parent / guardian (delete as necessary)
I agree - to what is proposed which has been explained to me by the practitioner above
I understand - that anaesthesia (general/regional/local) or sedation will be needed
- the procedure may not be done by the practitioner who has treated me so far
- any procedure in addition to the investigation or treatment described on this form will only be carried out if it is necessary and in my best interests and can be justified for medical reasons

I do not agree to the procedures below without having the opportunity to consider them first

Note to all health practitioners (Doctors, Dentists, Nurses, Professions allied to Medicine)

A patient has an absolute legal right to grant or withhold consent prior to examination or treatment and should be given sufficient information, in a way that they can understand, about the proposed treatment and possible alternatives. Patients may refuse or withdraw consent at any time. The patient's consent to treatment should be recorded on this consent form (further guidance is given in the NHS Lothian Policy).

Note to Patients

The health practitioners are here to help you. He or she will explain the proposed treatment and what other alternatives exist. You can ask any questions and seek further information. You can also refuse treatment.

You should be provided with sufficient information to allow you to come to a decision as to whether to consent to the treatment proposed. The type of information you should receive should include:

I. Nature of your condition and proposed procedures, including degree of urgency
II. Benefits to be reasonably accepted of the procedure
III. Nature and probability of material (=significant) risks involved, including consideration of ratio of risks and benefits
IV. Inability of the practitioner to predict results
V. Irreversibility of the procedure, if that is the case
VI. The likely result of not having the proposed treatment or procedure
VII. Alternatives available, including their risks and benefits

You may ask for a relative, a friend or a nurse to be present. It is important that you understand all the information given to you. Please ask for clarity if something is not clear.

Your treatment may provide an important opportunity for training doctors, dentists, nurses and other health professionals. Such training is under the careful supervision of a senior doctor, dentist, nurse or other health professional.

You may decline to be involved in the formal training of medical, dental, nursing and other students without this adversely affecting your care and treatment. You must tell a senior doctor or nurse if you do not wish students to be involved in your care.

Medical Photography – I agree to the use of Medical Photography

Date: 24/5 | Sheet no:
Ward:

IV fluids for adults: for more details, see pocket guideline or App

Consider volume status: Hypovolaemic / Euvolaemic / Hypervolaemic

Does your patient need IV fluids? If so, are they needed for:

Maintenance, Replacement, or Resuscitation?

Write in Maintenance requirements in next 24 hours:

Weight (kg) _____ Essential

Volume 30ml/kg	Sodium 1mmol/kg	Potassium 1mmol/kg (unless $K^+ > 5.0$)
ml	mmol	mmol

Estimated oral intake in the next 24 hours _____ ml. Oral intake will reduce the intravenous volume required

Never give more than 100 ml/hr of 0.18% NaCl / 4% Glucose: risk of hyponatraemia

If Sodium ≤132 mmol/l, then Plasmalyte 148 should be used for maintenance. Plasmalyte 148 not to be used for maintenance in other circumstances

Weight (kg)	Maintenance Fluid Requirement in 24hr	Rate (ml/hr)	Equivalent to 1000 ml over:
35-44	1200 ml	50	20 hr
45-54	1500 ml	65	16 hr
55-64	1800 ml	75	14 hr
65-74	2100 ml	85	12 hr
≥75	2400 ml	100 (max)	10 hr

*Prescribe **Maintenance fluids and diabetic fluids** here.* ***Max rate is 100ml/hr.***

Prescribe subcutaneous fluids using SC guidelines *Use separate prescription chart if more bags are required Mark as 'Sheet 2'*

Type + Additions	*Vol (ml)*	*IV/ SC*	*Rate (ml/hr)*	Start time	Finish time	Prescribed by (Sign and Print)	Set up by (Sign and Print)
Plasmalyte	1000	IV	85	0700			

*Use the box below to prescribe any additional fluids that are required for **Replacement** or **Resuscitation***

***Resuscitation:** give Fluid Challenge 250 to 500ml Plasmalyte 148 over 5 to 15 min. Stop and assess before repeat. Request senior / ICU opinion if 2000ml insufficient*

Pressure Area Care

Waterlow score less than 10 low risk requires only a daily skin review: Use codes for outcome of skin review													
Waterlow 10+ - Visual Skin Check (tick)	✓	N	N	N	N	N							
Outcome of skin review: (H) Healthy (R) Red, (P) Purple (B) Broken (BL) Blister	Abrasion	B	B	/	I	M							
Vulnerable areas? (circle areas of damage)	Heel (L) (R), Hips (L) (R), Sacrum, Spine, Other (R) ARM												
If changes in outcome of skin check, consider continence status, review frequency of CR and update care plan													
Have you changed position since last CR?	I	N	N	Y	Y	AS							
Positioning (R) or (L) side (B) Back (C) Chair	C	B	B	B	B								
Mattress type / Cushion type	*please state type:* Pentaflex												

Elimination

Do you need the toilet?	N	N	N	N	I								
Is the patient continent of urine? (at time of Care Rounding)	Y	I	I	I	Y								
Continence product changed/offered?	N/A	/	/	/	–								
Catheter care performed?	N/A	/	/	/	–								
Catheter bundle updated daily position catheter below the bladder / no more than 2/3 full with connections intact													
Is patient continent of faeces? (at time of Care Rounding)	Y	Y	Y	Y	Y								
Bowel function monitored	Observe bowel function and update daily												

Food, Fluid & Nutrition

Would you like a drink? Ensure fluids are within easy reach	FFMN	NBM	—		Y								
Fluid Balance Chart (if clinically indicated)	Y	Y	Y	Y	Y								
When did you last eat?	23/5	23/5	23/5	D	S								
(B) Breakfast (L) Lunch (D) Dinner (S)Snack (NBM) Nil by Mouth (A) Assistance Update Food Chart if required													
Oral Hygiene Performed (ref to risk assessment)	I	Y	N	N	I	A							

Falls

Appropriate Footwear?	Y	Y	Y	Y	Y								
Walking aid available(and within reach)	/	/	/	/	/								
Area de-cluttered?	Y	Y	Y	Y	Y								
Chair and bed height assessed?	Y	Y	Y	Y	Y								
Falls alarm in use and attached?	N/A	/	/	/	/								
Glasses available for use? (if worn) Hearing aid available for use? (if worn)	–	/	/	/	–								
Requires close observation for commode, toilet, bathing or showering Y ☐ N ☑													

Pain

Are you in pain?	Y	N	N	N	Y	AS							
Analgesia Given?	PO	N	N	N	Y	AS							

General

Peripheral Venous Cannula observed? x1	Y	Y	Y	Y	Y	Y							
Observe for signs of inflammation/swelling at every CR session. **Bundle/VIP score to be updated daily**													
Are you comfortable? Y/N	Y	Y	Y	Y	Y	AS							
Anything else I can do for you?	N	N	N	N	N	AS							
Buzzer within easy reach	Y	Y	Y	Y	Y	Y

Special Instructions - to be completed by Medical Team

A total NEWS score of ____ or individual parameter of ____ is acceptable for this patient because ____

Please escalate if ____

Print ____ Sign ____ Designation ____

Date ____ Time ____ *(only valid if signed and dated)*

***Regardless of NEWS always escalate if concerned about a patient's condition**

NEWS Score	Frequency of Observations	Clinical Response
Total 0*	**Minimum 12 hourly / 4 hourly in admission areas**	• Continue routine NEWS monitoring with every set of observations.
Total 1 - 4*	**Minimum 4 hourly** Consider Structured Response Tool Consider Fluid Balance Chart	• Inform registered nurse • Registered nurse assessment using ABCDE • Review frequency of observations • Inform Nurse in Charge • **If ongoing concern, escalate to Medical Team**
Total 5 - 6* or 3 in one parameter	**Increase frequency to a minimum of 1 hourly** Start Structured Response Tool Start Fluid Balance Chart	• Registered nurse assessment • Inform Nurse in Charge • Escalate to Medical Team as per local escalation • Urgent medical assessment • Management plan to be discussed with Senior Trainee or above • Consider level of monitoring required in relation to clinical care
Total 7* or more	**Continuous monitoring of vital signs** Start Structured Response Tool Start Fluid Balance Chart	• Registered nurse to assess immediately • Inform Nurse in Charge • Request immediate assessment by Senior Trainee or above • Case to be discussed with supervising Consultant • If appropriate contact Critical Care for review

NEWS ≥4 Think Sepsis

Are any 2 or more SIRS criteria present?

RECOGNISE

Temperature	<36°c or >38°c
Pulse	>90 beats/min
White Cell Count	<4 or >12
Respiratory Rate	> 20 bpm
Mental State	New confusion
Blood Sugar	>7.7mmol/L in non-diabetic

and clinical suspicion of infection = SEPSIS

Apply Sepsis 6 within 1 hour

RESUSCITATE

1. Give oxygen to target saturation >94% (NB COPD 88%-92%)
2. IV fluids up to 20ml/kg
3. Take blood cultures
4. Measure lactate and FBC
5. Give IV antibiotics
6. Monitor urine output & start fluid chart

REMEMBER
- **Record all observations** on NEWS chart
- **Document any** deterioration in the notes - remember the Structured Response Tool
- **Escalate** your frequency of observations
- If at any point during your assessment you are concerned about your patient - **CALL FOR HELP**

	Assess	Possible Actions
AIRWAY	Is the airway - • Patent • At Risk • Obstructed	→ Suction if indicated → Head tilt, chin lift/jaw thrust → Airway Adjuncts → Administer Oxygen → Call 2222 if at risk
BREATHING	• Respiratory rate • SpO2 • Accessory muscle use • Noises +/- percussion, palpation & auscultation • Position / posture	→ Administer prescribed Oxygen to maintain saturations 94%-98% (NB COPD 88%-92%) → Monitor SpO2 / ABGs → Consider chest x-ray → Treat underlying cause → Call 2222 if not breathing
CIRCULATION	• Pulse • Blood Pressure • Capillary refill time • Core temperature / colour • Urine output • Consider 4 body cavities for fluid & blood loss (4 + on the floor) • Monitor drain losses	→ Obtain IV access → Obtain blood samples → Prepare fluid challenge → Initiate Fluid Balance Chart → Call 2222 if no circulation → Consider initiating Major Haemorrhage Protocol → Monitor response to actions
DISABILITY A = Alert V = Voice / Verbal P = Pain U = Unresponsive	• AVPU for initial assessment • GCS, on-going neuro assessment • ABC's & treat hypoxia or hypovolaemia • Blood Glucose • Drugs	→ Re-assess GCS → Check blood glucose if less than 4mmols/litre activate hypoglycaemia protocol → Check Drug Chart → Remember accurate documentation
EXPOSURE	• Top to toe examination • Look for evidence of blood loss / rashes / drains / wounds etc	→ Control bleeding → Treat any underlying conditions identified → Reassess → Maintain patient's dignity → Evaluate actions

Pain Assessment and Management Guidelines

Cancer-related pain: Always score worst pain in the last 24 hours or since last assessment: refer to Palliative Care Guidelines

Acute Pain: Score current pain on movement, e.g. deep breathing: refer to Acute Pain Guidelines

Persistent pain - 6 or above which distresses the patient and is unresponsive to guidelines

↓

Call Medical staff / Senior Nurse / Nurse Practitioner

↓

For further advice contact:

ACUTE	PALLIATIVE
Mon-Fri: Bleep Acute Pain Team Out of Hours: On-call Anaesthetist	Mon-Fri: Bleep Palliative Care Team Out of Hours: Via Switchboard

Pain Score	Nausea Score 0-3	Epidural Motor Block Score please do not √ motor block column
0 None Continue to assess pain at least daily	**0 - No Nausea**	**0 - Full Power**
1-3 Mild Continue to assess pain with routine observations, must be at least daily	**1 - Nausea** Consider anti-emetic	**1 - Weak but able to raise legs** **2 - Able to bend knees**
4-5 Moderate Assess, administer and review analgesia as appropriate for patient	**2 - Nausea / Vomiting** Administer anti-emetic	**3 - Minimal movement**
6-10 Severe Assess, administer and review analgesia as appropriate for patient	**3 - Persistent Nausea &/or Vomiting** Contact Doctor	**4 - Paralysis**
Using appropriate Lothian Guidelines	**Using guidelines prescribe / give anti-emetics and review**	If score 2 or above please immediately contact the Acute Pain Team or On-Call Anaesthetist if out of hours

OTHER MEDICINE CHARTS IN USE		PREVIOUS ADVERSE REACTIONS This section must be completed before any medicine is given		Completed by (sign & print)	Date
Date	Type of Chart	None known ☑			
		Medicine / Agent	Description of reaction		

- Write clearly in block capitals, using a black ballpoint pen
- Use approved names for medicines
- Never alter a prescription
- Route of administration

The only acceptable abbreviations are:

IV	- intravenous	SL	- sublingual	NG	- nasogastric
IM	- intramuscular	PR	- per rectum	ID	- intradermal
SC	- subcutaneous	PV	- per vagina	TOP	- topical
INHAL	- inhaled	NEB	- nebulised		

Never abbreviate ORAL or INTRATHECAL
Specify RIGHT or LEFT for eye and ear preparations

- Write the medicine dose clearly
  - The only acceptable abbreviations are:
    g - gram mg - milligram ml - millilitre
    all other doses must be written out in full eg. micrograms
  - Avoid decimal points eg. 100 micrograms (not 0.1mg). If unavoidable, write zero in front of the decimal point
  - Prescribe liquids by writing the dose in mg
  - For 'as required' medicines, state the symptoms to be relieved, the minimum time interval between doses and the maximum daily dose
  - Write units as 'units' not 'iu'

REGULAR THERAPY

CODES FOR NON-ADMINISTRATION OF PRESCRIBED MEDICINE

If a dose is not administered as prescribed, initial and enter a code in the column with a circle drawn round the code according to the reason as shown below. **Inform the responsible doctor in the appropriate timescale.**

1. Patient refuses
2. Patient not present
3. Medicines not available - CHECK ORDERED
4. Asleep / drowsy
5. Administration route not available - CHECK FOR ALTERNATIVE
6. Vomiting / nausea
7. Time varied on doctor's instructions
8. Once only / as required medicine given
9. Dose withheld on doctor's instructions
10. Possible adverse reaction / side effect

OPERATION SUMMARY. TO BE COMPLETED BY SURGICAL TEAM

SURGEON
mr Watson

ASSISTANTS

ANTIBIOTICS REQ IV Augmentin.

OPERATION PERFORMED

DIATHERMY USED ☐ YES ☐ NO

- Washout wound x 2 forearm Right.
- Closed reduction Right post. Ulnar dislocation.

POST OP INSTRUCTIONS HOME TODAY ☐ YES ☒ NO

MOBILITY

FOLLOW UP

1. Analgesia.
2. Thin remaining ant 3x5cm defect on flexor surface of forearm. - Refer plastics in morning
3. Ulnar unstable in extremes of Extension / Radial deviation - refer hand surgeon for def. management.
4. Continue IV Tazo 48hrs.

B Watson.

Hospital: .....

Patient's Surname: .....

Other Names: .....

Unit Number: .....

CHI Number: .....

Sex (tick box) Male ❑ Female ❑ Date of Birth .....

(To be completed by the medical, dental, nursing or paramedical practitioner. See notes)

Type of operation, investigation or treatment for which written evidence of consent is considered appropriate.

Right forearm wound exploration + washout +/- closure +/- skin graft plus open reduction +/- internal fixation of wrist.

I confirm that I have explained to the patient in terms which in my judgement are suited to his/her understanding (and/or to one of his/her parents or guardians), the proposed operation, investigation or treatment, including options available, and if relevant, the need for anaesthesia or sedation.

Relevant Written Information given to the patient: ❑ Yes ❑ No

Signature ..... Date 21/8/13

Name and Status of Practitioner J ZHANG.

Re-confirmation of Consent on the day of admission:

Signature ..... Date .....

Name and Status of Practitioner .....

To the Patient (or Parent or Guardian if Appropriate)

1. **Please read this form and the notes overleaf very carefully.**
2. **If there is anything that you don't understand about the explanation or if you want more information, you should ask the practitioner before signing.**
3. **Please check that all the information on the form is correct. If it is and you understand the explanation, then sign the form.**

I am the patient/parent/guardian *(delete as necessary)*

I agree
- ✧ to what is proposed, which has been explained to me by the practitioner named above

I understand
- ✧ that anaesthesia (general/regional/local) or sedation will be needed
- ✧ that the procedure may not be done by the practitioner who has been treating me so far
- ✧ that any procedure in addition to the investigation or treatment described on this form will only be carried out if it is necessary and in my best interests and can be justified for medical reasons

I have told
- ✧ the practitioner about the procedures I have noted below* which I would wish not to be carried out without my having the opportunity to consider them first

Signature ..... Name .....

Address ..... Date .....

NOTES TO ALL HEALTH PRACTITIONERS
(DOCTORS, DENTISTS, NURSES, PROFESSIONS ALLIED TO MEDICINE)

A patient has an absolute legal right to grant or withhold consent prior to examination or treatment. Patients should be given sufficient information, in a way that they can understand, about the proposed treatment and the possible alternatives. Patients must be allowed to decide whether they will agree to the treatment and they may refuse or withdraw consent to the treatment at any time. The patient's consent to treatment should be recorded on this consent form (further guidance is given in the Trust Policy Statement).

NOTES TO PATIENTS

The health practitioner is here to help you. He or she will explain the proposed treatment and what the alternatives are. You can ask any questions and seek further information. You can refuse treatment.

You should be provided with sufficient information to allow you to come to a decision as to whether to consent to the treatment proposed. The type of information you should receive should include:

I. Nature of your condition & proposed procedures, including degree of urgency
II. Benefits to be reasonably accepted of the procedure
III. Nature & probability of material (= significant) risks involved, including consideration of ratio of risks and benefits
IV. Inability of the practitioner to predict results
V. Irreversibility of the procedure, if that is the case
VI. The likely result of not having the proposed treatment or procedure
VII. Alternatives available, including their risks and benefits

You may ask for a relative, a friend or a nurse to be present.

Training doctors, dentists, nurses and other health professionals is essential to the continuation of the health service and improving the quality of care. Your treatment may provide an important opportunity for such training, where necessary under the careful supervision of a senior doctor, dentist, nurse or other health professional.

You may however decline to be involved in the formal training of medical, dental, nursing and other students without this adversely affecting your care and treatment. You must tell a senior doctor or nurse if you do not wish students to be involved in your care and you should write this on the consent form in the space for things that you do not wish to happen without your being given the chance to consider them first.

The 4A Test: screening instrument for cognitive impairment and delirium

Addressograph, or
Name
DoB
Unit no. / CHI

CIRCLE as appropriate

[1] ALERTNESS

This includes patients who may be markedly drowsy (eg. difficult to rouse and/or obviously sleepy during assessment) or agitated/hyperactive. Observe the patient. If asleep, attempt to wake with speech or gentle touch on shoulder. Ask the patient to state their name and address to assist rating.

Normal (fully alert, but not agitated, throughout assessment)	0
Mild sleepiness for <10 seconds after waking, then normal	0
Clearly abnormal	4

[2] AMT4

Age, date of birth, place (name of the hospital or building), current year.

No mistakes	0
1 mistake	1
2 or more mistakes/untestable	2

[3] ATTENTION

Ask the patient: "Please tell me the months of the year in backwards order, starting at December." To assist initial understanding one prompt of "what is the month before December?" is permitted.

Months of the year backwards	Achieves 7 months or more correctly	0
	Starts but scores < 7 months / refuses to start	1
	Untestable (cannot start because unwell, drowsy, inattentive)	2

[4] ACUTE CHANGE OR FLUCTUATING COURSE

Evidence of significant change or fluctuation in: alertness, cognition, other mental function (eg. paranoia, hallucinations) arising over the last 2 weeks and still evident in last 24hrs

No	0
Yes	4

4 or above: possible delirium +/- cognitive impairment

1-3: possible cognitive impairment **4AT SCORE** ☐

0: delirium or cognitive impairment unlikely (but delirium still possible if [4] information incomplete)

Date: **time:** **signature** **print**

GUIDANCE NOTES

The 4AT is a screening instrument designed for rapid and sensitive initial assessment of cognitive impairment and delirium. A score of 4 or more *suggests* delirium but is not diagnostic: more detailed assessment of mental status may be required to reach a diagnosis. A score of 1-3 suggests cognitive impairment and more detailed cognitive testing and informant history-taking are required. Items 1-3 are rated *solely on observation of the patient at the time of assessment.* Item 4 requires information from one or more source(s), eg. your own knowledge of the patient, other staff who know the patient (eg. ward nurses), GP letter, case notes, carers. The tester should take account of communication difficulties (hearing impairment, dysphasia, lack of common language) when carrying out the test and interpreting the score.

Alertness: Altered level of alertness is very likely to be delirium in general hospital settings. If the patient shows significant altered alertness during the bedside assessment, score 4 for this item. **AMT4 (Abbreviated Mental Test - 4):** This score can be extracted from items in the full AMT if done immediately before. **Acute Change or Fluctuating Course:** Fluctuation can occur without delirium in some cases of dementia, but marked fluctuation usually indicates delirium. To help elicit any hallucinations and/or paranoid thoughts ask the patient questions such as, "Are you concerned about anything going on here?"; "Do you feel frightened by anything or anyone?"; "Have you been seeing or hearing anything unusual?" In general hospital settings psychotic symptoms most often reflect delirium rather than functional psychosis (such as schizophrenia).

Stratified Falls Risk Assessment

Addressograph, or
Name
DOB
Unit no. / CHI

NHS Lothian

Guidance: assessment should be carried out on admission weekly thereafter

- All patients admitted with a fall
- Has fallen since admission -
- Aged 65 or over
- Clinical judgement regarding completing a falls risk assessment for patients that fall out with this category

Falls Risk Assessment (Stratify)	YES	NO
Admitted with fall or fall since admission.	1	0
Confused or agitated.	1	0
Function impaired by poor vision.	1	0
Frequent toileting.	1	0
Help or assistance to transfer / walk (score 0 if bed-bound).	1	0

Date	Score	Action / Comment / Clinical Judgement	Initial
21.8.13	0	RW 1 wk	CD

Complete first section of care plan for all patients		Initial / date
Goal / Objective	Reduce the risk of the patient falling to its lowest level Raise awareness of risk reduction strategies Engage multidisciplinary team, patient &/or carers to ensure best outcome	
	Discuss and ensure safe footwear with patient / family / carers	
	Ensure the mobility assessment is completed	
	Refer to podiatrist if required / available	
	Manage communication problems such as eyesight, hearing, language in discussion with patient and / or carers as appropriate	
	The outcome of the falls assessment to be fully discussed with the patient and/or (if appropriate) with family/carers, with the patient's consent where possible	
	Falls risk sign displayed and falls leaflet issued to patient, family, carers, relatives	
	Commence MDT Falls Prevention Checklist	
	Consider an Elderly Care Review for the patient who has frequent or unexplained falls	
	Physiotherapy referral	
	Occupational Therapy referral	
	Consider regular observation / intentional rounding as appropriate	
	Lying and standing BP (lying 10 mins, stand for 1, 2 & 3 mins). Report BP deficit (20mm Hg in systolic BP is considered significant)	
	Position patient in easily observable area/position – consider lighting	
	Bed rails risk assessment	
	Consider one-to-one nursing – escalate concerns	
	Consider use of falls sensor, as per guidance (if available)	
• If patient found to be at risk of falls, commence 2 hourly care rounding using clinical judgement • If a falls occurs please complete relevant documentation located on the intranet / ensure care plan contains information relating to risk of falls / post falls information

6. Review mobility assessment		

Appendix 5

RATIONALE FOR USE OF BEDRAILS

Addressograph Label	DATE: 21·8 WARD: 109 PAGE NO: Bedrails are considered a form of restraint if used incorrectly and should only be used after careful assessment has taken place

1.	An initial documented nursing and falls risk assessment is made within 24 hours of admission		
2.	Discuss with patient/carer the purpose for the use of bedrails and the necessity for ongoing assessment		
3.	Does the patient understand the rationale for the use of bedrails?	YES	NO
4	Has the patient/carer requested the use of bedrails i.e. have they used them before?	YES	NO

Rationale: _____

5 Is there an alternative to meet the patient's needs?

Explain: _____

6	Following discussion are bedrails still requested?	YES	NO
7.	Is the patient at risk of falling out of bed?	YES	NO

If yes identify risk: _____

8.	Would there be an increased risk of injury or restraint to the patient if bedrails are used?	YES	NO

If yes identify risk: _____

Clostridum Difficile Risk Assessment Form

Addressograph, or
Name
DOB
Unit no. / CHI

As part of a strategy to reduce preventable cases of Clostridium Difficile, the following advice should be taken and this form completed on admission for all patients.

Patients of any age transferred from any ward/other hospital (excluding admission ward)	Patients aged **65-82** and treated with any antibiotic *other than trimethoprim* in the last 14 days	Patients aged **83 or older** and treated with any antibiotic in the last 14 days	Patients has a Waterlow score ➢ **20**
Yes: ☐ No: ☑	Yes: ☐ No: ☑	Yes: ☐ No: ☑	Yes: ☐ No: ☐

If "No" to all of the above, the patient is not at increased risk of *C. difficile.*

If YES to one or more of the above the patient is at increased risk – MEDICAL REVIEW REQUIRED

Recommendations

1. Stop PPI *if possible:* PPI stopped: ☐ PPI continued : ☐ Not on PPI: ☐
2. Stop laxative *if possible:* Laxative stopped: ☐ Laxative continued: ☐ Not on laxative: ☐
3. **Set stop date for any current antibiotic**
   Stop date set:: ☐ Stop date not set: ☐ Not on antibiotic: ☐

N.B IF NO STOP DATE MEDICAL STAFF TO UPDATE Drug Prescribing and Administration Chart PRIOR TO ADMINISTRATION

Prescribing advice for new suspected infective illness

1. Avoid blind prescription unless clinically necessary
2. If blind treatment necessary, consult UHD prescribing policy unless local policy in place.

FURTHER TREATMENT SHOULD BE BASED ON CULTURE & SENSITIVITY RESULTS AND SENIOR ADVICE

Assessments to be repeated if change in condition / commenced antibiotics

Date	Outcome of Risk Assessment	Initials

Management Guidelines

If diarrhoea develops please refer to Infection Control Policy, which can be located on the Intranet . Patient should be isolated and Action Plan completed and Bristol Stool Chart commenced

Mouth Care Assessment

Week beginning														
Day please circle	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
MUCOUS MEMBRANES/ TONGUE 1= Pink and moist 2= Reddened/Blue-red/ White/Coated 3= Very red or thick/ Ulceration +/- bleeding/Debris			1											
GINGIVAE 1= Pink and firm 2= Oedematous and/or Redness/ White coating 3= Ulcerated or bleeding			1											
SALIVA 1= Watery 2= Viscous 3= Absent			1											
TEETH 1= Clean 2= Localised plaque or debris 3= Generalised plaque or debris			1											
Total Score			4											

ACTION PLAN: if mouth score of > 1 for any individual category follow action plan below ensure mouth care is being undertaken

LIPS	2	Vaseline +/- plain moisturiser
	3	Swab, inform medical staff, care as per 2 and analgesia
Tongue	2	Medical staff review, brush tongue to see if coating can be removed,
Mucous	3	Difflam spray for analgesia
Saliva	2	Treatment depends on cause (medical review)
	3	Inform medical staff for review
Teeth	2	Continue mouthcare
	3	May require dental treatment upon discharge

SEWS Chart

NHS Lothian

700576136V/E2543187 M 04/07/1981 **MacIntyre, Thomas R** 3/3 Bowhill Terrace, Edinburgh, Name: EH13 5QY DOB: CHI 0407813233 CHI: 70732 L MacCallum	Consultant: _____ Date chart commenced: _____ This is chart number _____ this admission Weight: Actual _____kgs Estimated _____kgs ASU: _____

How to calculate a Standardised Early Warning (SEWS) in NHS Lothian

The clinical observations used to calculate a SEWS score are:

- Respiratory rate
- Oxygen saturation
- Temperature
- Systolic blood pressure
- Heart rate
- Sedation/Neurological score (AVPU)
- Urine output

The SEWS chart is colour coded to identify when a clinical observation is outside the normal range. A SEWS of 0-3 is allocated to each parameter using the SEWS key as shown.

SEWS KEY

0 1 2 3

All the observations have to be recorded and the total score added up and signed for. **A SEWS score of 4 or more** is an alert that a patient is acutely ill or deteriorating and an appropriate response using the escalation procedure is required... SEWS should NOT replace sound clinical judgement. Immediate action and appropriate escalation should take place if there are any concerns regarding a patient's clinical condition. Staff are accountable for seeking further help if not reassured by the response and action taken. Follow the ABCDE guidance on assessment and action and the flowchart for appropriate escalation.

Score 0-1 Routine observation - state frequency
2-3 Inform nurse in charge and initiate appropriate treatment

Staff should use SBAR in all communications

Definition:
- **S**ituation
- **B**ackground
- **A**ssessment
- **R**ecommendations

SEWS should guide the frequency of patients monitoring

SEWS SCORE OF 1-3 MINIMUM 4 HOURLY OBSERVATIONS	SEWS SCORE OF 3 IN ONE PARAMETER OR SEWS SCORE OF 4-5 MINIMUM 1 HOURLY OBSERVATIONS	SEWS SCORE OF 6 OR MORE CONTINUOUS MONITORING OF VITAL SIGNS

Respiratory distress: The presence of respiratory distress is an important sign of acute illness. The patient may complain of feeling breathless. Other signs include, looking breathless, using accessory muscles of respiration, pursed lip breathing and audible breathing. If the patient has signs of respiratory distress please record in notes.

Urinary output: If a patients fluid balance is of concern and urine output is measured hourly to 4 hourly they should be on a fluid balance chart where blood loss is also recorded. If urine output is sufficient the score entered on the SEWS chart is 0. If urine output for catheterised patients is less than 30mls per hour for more than 3hrs the score is 3. If a patient has not passed urine within 12 hours the score is 3.

Sepsis criteria met Y/N: If the patient has a SEWS score of 4 or more and two or more of the Systemic Inflammatory Response Syndrome (SIRS) criteria, chart this on the SEWS chart and initiate the sepsis 6 bundle which should be completed **within one hour**. If sepsis is suspected do not hesitate to act before the criteria are breached.

Pain: The pain score must be recorded in the chart. Refer to the pain assessment and management guidelines.

ABCDE: ASSESSMENT AND CLINICAL RESPONSE TO SEWS TRIGGERS

	Assess	Possible Actions
AIRWAY	Is the Airway – • PATENT, • AT RISK, • OBSTRUCTED.	→ Suction if Indicated, → Head tilt, chin lift/jaw thrust → Airway Adjuncts, → Administer Oxygen, → Call 2222 if at Risk.
BREATHING	• Respiratory rate, • SpO2, • Accessory Muscle use • Noises +/- Percussion, Palpation & Auscultation, • Position/posture.	→ Administer prescribed Oxygen to maintain saturations 94%-98 % (NB COPD 88%-92%) → Monitor SpO2/ABGs → Consider Chest X-Ray → Treat underlying cause, → Call 2222 if not breathing.
CIRCULATION	• Pulse, • Blood Pressure, • Capillary refill time • Core Temp/Colour, • Urine Output, • Consider 4 body cavities for fluid/blood loss (4 + on the floor) • Monitor drain losses	→ Obtain IV access → Obtain blood samples → Prepare fluid challenge, → Initiate Fluid balance Chart → Call 2222 if no circulation → Consider initiating Major Haemorrhage Protocol → Monitor Response to actions
DISABILITY A = Alert V = Voice/Verbal P = Pain U = Unresponsive	• AVPU for initial assessment • GCS, on-going neuro assessment • ABC's & treat Hypoxia or Hypovolaemia, • Blood Glucose • Drugs.	→ Re-assess GCS → Check blood glucose if less than 4mmols/litre activate hypoglycaemia protocol → Check drug chart, → Remember Accurate Documentation
EXPOSURE	• Top to Toe examination, • Look for evidence of blood loss / rashes / drains / wounds etc,	→ Control bleeding, → Treat any underlying conditions identified, → Reassess, → Maintain patient's dignity. → Evaluate actions → Escalate if appropriate

Remember: to record all observations on SEWS chart & document any deterioration in the notes.
If at any point during your assessment you are concerned about your patient - **Call for help.**

Pain Assessment & Management Guidelines

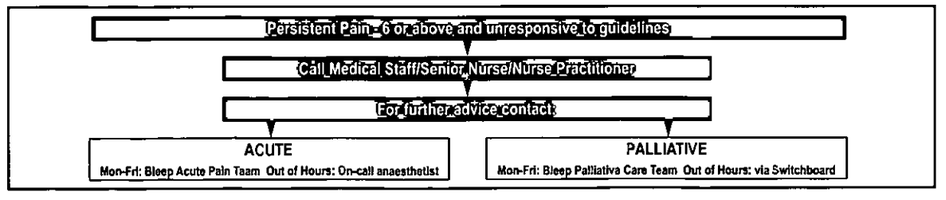
How to score pain:

Cancer-related pain:		Always score worst pain in last 24 hours or since last assessment.
Acute pain:		Score current pain on movement e.g. deep breathing
Pain Score:		Action:
0	NONE	Continue to assess pain with every set of observations (must be at least daily)
1-3	MILD	Continue to assess pain with every set of observations (must be at least daily)
4-5	MODERATE	Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review.
6-10	SEVERE	Assess. Using guidelines, prescribe/give analgesia as appropriate for the patient. Review.

PERSISTENT SEVERE PAIN (6 OR ABOVE), WHICH DISTRESSES THE PATIENT: REFER. SEE FLOW CHART BELOW.

Pain Assessment & Management Guidelines

Cancer-related pain:	Initiate Edinburgh Pain Assessment Tool (EPAT©) for pain score of 4 or above. Use Palliative Care Guidelines
Acute pain:	Use Acute Pain Guidelines



Nausea Score (0-3)

0 = No Nausea
1 = Nausea (consider anti-emetic)
2 = Nausea/Vomiting (administer anti-emetic)
3 = Persistent Nausea &/or Vomiting (contact Doctor)

PERSISTENT NAUSEA &/OR VOMITING: USING GUIDELINES PRESCRIBE / GIVE ANTI-EMETICS. REVIEW.

09:00 17:00 — **SEWS 6 or any other concerns**

First Response 15 Minutes	▷	Inform Nurse In Charge and/or FY1 Doctor
Second Response 15 Minutes	▷	Inform Advanced Nurse Practitioner and/or FY2 Doctor
Third Response 10 Minutes	▷	Inform Middle Grade Doctor CT/ST level
Fourth Response	▷	Call 2222 and Appropriate Consultant

17:00 21:00

First Response 15 Minutes	▷	Inform FY1/FY2
Second Response 15 Minutes	▷	Inform Middle Grade

21:00 09:00 — **HAN Team Response:**

Safety huddles at shift handover/post ward round to alert any concerns → SEWS above 3 or any other concerns → NO → Resume appropriate observations

YES → Perform ABCDE assessment and manual obs. N.B. individual patient trends - if no change → Inform nurse in charge/ NP/local doctor of findings → Give prescribed oxygen to maintain O_2 sats 94 - 98% (NB COPD patients 88 - 92%) → Reposition patient if parameters allow → Assess the need for IVI +/- fluid bolus → Check prescription and give medication as prescribed → Re-check observations within 30 minutes → SEWS 4 or above or any other concerns

NO → Resume appropriate observations

YES → Immediately refer to escalation board and commence response

SEWS greater than 4 THINK SEPSIS
Are any 2 or more of SIRS criteria present?

- Temperature: less than 36° or more than 38°
- Heart rate more than 90 bpm
- Respiratory Rate more than 20 bpm
- White Cell Count less than 4 or greater than 12

AND clinical suspicion of infection
Note, new confusion may be a sign of infection

Apply SEPSIS 6 within 1 Hour

1. Perform blood cultures
2. Administer IV antibiotics (as directed by formulary against most likely pathogen)
3. IV fluids give IV saline/equivalent; start with 20ml/kg as a fluid bolus aim for BP target on reassessment.
4. High flow O2 (if CO2 retention, give controlled oxygen and aim for SpO2 of 88-92%)
5. Measure lactate
6. Monitor urine output. (Consider urinary catheter)
