Date	
14.09.00	I'm not really sure why this patient has attended. Feel down 12 stairs in house few days ago. NO LOC "just felt weak" Unable to articulate any reason behind the fall. Went to A+E, examined, no problems. Has an (old) collar on today of inevitable but co-operative. Neck is rather stiff but passive movement is resisted. No focal limb weakness. I have suggested (profound) use may exacerbate her feelings of generalised weakness. Heavily negative about everything. A suspect agenda is medical support for house move + has children - I'm not sure what we can offer here @ this stage but have Mr. Dudgeon tried to be supportive.
27/9/00	② Cgm - finished.

This is your MATERNITY CERTIFICATE

Use this certificate if you want to claim

Statutory Maternity Pay (SMP)
or Maternity Benefits

Before you use the certificate, please fill in your name and
address below

Your full name _____

Your address _____
and postcode _____

More information

There is more information in leaflet **FB8** and *Benefits*. You can get this leaflet from ante-natal clinics, or any Social Security office.

You can make free phone calls for general advice about maternity benefits. Ring Freeline Social Security — just dial 0800 666 555.

There are time limits for claiming. You may lose money if your claim is late.

Statutory Maternity Pay (SMP)

You may be entitled to payments from your employer if

- you have worked for the same employer from the beginning of your pregnancy into the 15th week before the week when you expect to have your (your 26th week of pregnancy).

Ask your employer if you can get SMP. Do this now.

Maternity Allowance

This is a benefit you may be entitled to if

- you are self-employed
- you do not have an employer
- your employer cannot pay you SMP.

If you think you may be entitled to Maternity Allowance get form **MA1** from a Social Security office, a maternity clinic or child health clinic.

Maternity Payment from the Social Fund

You may be able to get this payment if you or your

- are getting Income Support or Family Credit.
- get Income Support or Family Credit within 3 months of the birth of your

Ask for form **SF100** from your ante-natal clinic or Social Security office. When you claim you may use this certificate or some other proof, like your clinic appointment card, if it shows when you expect to have your

Child Benefit

You can claim this benefit when your is born. Use the coupon in leaflet **FB8** and *Benefits* to get a claim form.

Or write to your Social Security office for one — they will need to know if you are already getting Child Benefit for another child.

Dear Dr. [REDACTED]

**VERONICA GLANCY, 437 PAPPERT, BONHILL
D.O.B. 4.6.69**

Thank you for referring this patient to the gynaecology clinic where she was seen with her complaint of left iliac fossa pain which is dull aching in character and nearly there all the time. She also complained of deep dyspareunia and back pain. She had no abnormal vaginal discharge and she has been having normal period. She has no urinary or bowel problems and uses no contraception. She refused to be examined today as she had a period and she will come back in two weeks time for ultrasound and vaginal examination.

Yours sincerely,

**H KIROLOS

Dear Dr Haxton,

I should be grateful if you would see this 28 year old woman who has previously attended your Clinic. She underwent an ovarian cystectomy with ovarian conservation in June, 1996 and was subsequently reviewed by yourself after she developed further abdominal pain which was felt to be adhesions. She has recently developed a recurrence of the pain, partly around her operation site and partly around the left iliac fossa.

Abdominal examination reveals left iliac fossa tenderness and perhaps a slight fullness. A recently abdominal ultra sound revealed no significant pathology.

In view of her past history, I would be grateful for your opinion on her symptoms.

Yours sincerely,

Dr [REDACTED] Glen

Dear Dr. [redacted]

**VERONICA GLANCY, 437 PAPPERT, BONHILL
D.O.B. 4.6.69**

Your patient attended the clinic for review. She is still complaining of some lower abdominal discomfort which is bearable. She said sometimes she has to take pain killers. Abdominal examination was unremarkable and she refused vaginal examination. I have discharged her from the clinic and she was happy with this result.

Yours sincerely,

Dear Miss Glancy

In the light of recent publicity about certain oral contraceptive pills, namely Mercilon, Marvelon, Femodene, Femodene ED, Minulet, Triadene and Tri-Minulet, we have reviewed our patients' records and note that you appear to be taking one of the aforementioned pills.

We feel it would be in your interest to discuss this matter further with a member of the medical or nursing staff.

There is no need to be alarmed and you should continue with your present oral contraceptive in the meantime.

Please telephone the receptionist who will arrange an appointment.

Yours sincerely

Dear Dr [REDACTED]

RE: PATIENT: VERONICA [REDACTED]
ADR REGISTRATION NUMBER: 308581

Thank you for sending us a suspected adverse drug reaction report on the above patient. A copy is enclosed for your records. If additional information becomes available about this report it would be most helpful if you could send this to us, quoting the above reference number.

Your contribution to the Committee on Safety of Medicines' Adverse Drug Reaction Reporting Scheme is greatly appreciated. This provides an important early warning of previously unrecognised adverse effects which allows us to take appropriate action to improve the safe use of medicines.

Yours sincerely,

Dr S M [REDACTED]
Head - Adverse Drug Reactions Unit

Dear Dr Herron

VERONICA GLANCY DATE OF BIRTH 04.08.89
 26 BRIGHTON STREET GLASGOW G51 2EH

Thank you for referring this 25 year old lady to Dr Hood's Gynaecology Clinic where she was seen on 14 June 1994.

She complained of frequent heavy periods with lots of crampy lower abdominal pain for the past 6 months. She denied any associated intermenstrual or post-coital bleeding. She tells me she stopped taking the Depo Provera injection well over 3 year ago. A cervical smear performed last year was reported as normal.

Her last menstrual period was on 4 June 1994. She bleeds for 7 days every 14 to 28 days. She declined to have a bi manual pelvic examination and a pelvic ultrasound assessment was essentially reported as normal. She has been advised to call on you for a prescription of oral contraception Femodene to be taken for 3 months.

No follow-up has been arranged.

Yours sincerely

I wonder if you would be kind enough to call this girl to your clinic. She reports that for the last 3 months she has had frequent irregular periods. Her periods seem to come twice a month and last seven days. They are heavy with small clots. Her periods have previously been regular. She is not currently using any method of contraception. She has had two children both normal deliveries in 1987 and 1989. Her mother recently died of primary biliary cirrhosis and she has been quite upset. She refused pelvic examination today but is keen to have this attention.

I would be grateful for your help.

Yours sincerely

Dr B Duthie

I would be grateful for your opinion and advice on the above named patient. A brief outline of history, symptoms and signs is given below:

I would be most grateful if this 4 year old boy and his family could be seen at D.C.F.P. He actually last attended in April of this year when he was seen by Dr [redacted]. I note that they requested to be discharged from attending at that time although he does now in earnest have problems that never significantly resolved. A number of life crisis however occurred in recent months which have compounded the family's difficult situation. [redacted] was seen by his mother as the focus of the family problem. He is extremely insubordinate and aggressive towards his mother lashing out against her constantly. Initially his behaviour at the nursery [redacted] had been entirely acceptable but he would resort to his aggressive pattern of behaviour as soon as he reached home. I understand that in recent months his behaviour at nursery has also deteriorated. This apparent deterioration coincides with the family having been abandoned by both children's father, and more recently by the death of [redacted] mother Veronica has reached a stage where she is unable to cope with the situation. [redacted] was born when Veronica had just turned 20. Much of that time has been spent as a single [redacted] and Veronica has never really coped with the situation. It would appear that she has never been consistent in [redacted] setting with either Michael or his [redacted] and she finds it difficult to grasp the importance of secure stable family environment for the children together with consistent handling. She appears to be a well motivated mother, but clearly finds parenthood extremely difficult to cope with.

Your further input to this family would be most welcome.

Yours sincerely

Dear Dr Heron

Re: Miss Veronica Glancy. d.o.b. 04.06.69
1/R
26 Brighton Street
Glasgow
G51

The above named patient was seen at the colposcopy clinic 6 months after treatment for CIN 2.

Colposcopic examination was satisfactory as the upper limit of the transformation zone was seen.

Cytology was reported as negative.

Histology: Biopsy was not done.

We will review this patient again in 8 months.

Yours sincerely

J [Signature]

Dear Dr Herron

Re: Veronica Glancy (4.6.69)
26 Brighton Street, Glasgow, G51

I saw your patient on Ward 21 on 1.10.93. She had been admitted to Ward 21 on 30.9.93 after having taken an overdose of 20 Co-proxamol tablets. She was given Ipecacuanha at A & E and as her Paracetamol level was not very high no treatment was given actively. She tells me that her [redacted] had walked out on her four weeks ago leaving her with two children. He apparently is [redacted] another woman who is bisexual but is apparently involved sexually with him "he's dealing drugs and I don't smoke hash". She tells me her mother has cirrhosis and that she just wanted to get away from the pressure of everything. She did not leave a suicide note and had made no previous arrangements to kill herself. There did not appear to be any real suicidal intent "wasn't planning to kill myself". She did not seem to be aware of the fatally potential complications of this overdose "I phoned him after I took them but he did not want to know". There was no alcohol involved. She tells me she will not take an overdose again and agrees that it has not resolved anything.

Past Medical History

Nil.

Past Psychiatric History

One previous overdose at age sixteen. No follow-up.

Personal History

Born in Glasgow, Southern General; [redacted] Govan all her life. Normal milestones. Enjoyed good health as a child. Went to local primary [redacted] and secondary [redacted] for six months, thereafter Snowdon long stay [redacted] She left there at fifteen with no qualifications and has since worked on a YTS for

one year but left after discovering she was pregnant and has been a housewife since. She met her [redacted] at seventeen, [redacted] Watt, and they [redacted] a tenemental two [redacted] in Ibrox. Her children are [redacted] her [redacted] just now. Her main income is from the social security services. She smokes thirty cigarettes a day and does not drink alcohol and there is no forensic history of note.

Pre-Morbid Personality

"One day I could be good, one day I could be bad". "My moods change".

When I met her she was wearing a hospital gown and had long ginger hair. She appeared rather apathetic and rather tired. She was lying down in the chair and could not be bothered to talk much. She generally entertained minimal eye contact but did not show any abnormal movements. Her speech had normal form and normal content. Her thought content did not exhibit any psychotic symptoms. There were no delusions. She would seem to be rather sorry for herself and obviously crying for attention from her [redacted]. Her intellect was below average. Her concentration was reasonable.

Overall this is a twenty-four year old lady with a previous history of impulsive type overdose again reacting with another impulsive overdose to unfortunately social circumstances but there does not appear to have been active suicidal intent and in fact I think she was rather unaware of the potentially fatal implications. She assures me that she will not take an overdose again and I told her it was rather pointless. I offered her an out-patient appointment which she refused, however I will be happy to see her at the clinic if you think it is necessary.

Yours sincerely

T Bhatti

Dear Dr. Herron,

VERONICA GLANCY, D.O.B. 4.6.89
26 BRIGHTON STREET, GLASGOW

This 24 year old with two young children was admitted having taken 20 Co-proxamol tablets four weeks after the departure of her [redacted]. She had oral administered Ipecac and vomited, although there were no tablets. Her paracetamol level was below the treatment line and she had no problems in terms of medical side effects from her overdose. She was kindly seen by the psychiatrist who felt that this was an impulsive overdose related to her social circumstances and although they offered an appointment there was none fixed. She was mobilised and discharged.

Yours sincerely,

DR. S M [redacted]
Consultant Physician/Rheumatologist.

Dear Dr [REDACTED]

VERONICA GLANCY DATE OF BIRTH 04.06.69
 26 BRIGHTON STREET GLASGOW G52 2EH

Thank you for referring this 23 year old lady who is in a stable relationship. Her [REDACTED] is the father of both her children. She definitely wants to be sterilized. She says her children are too much for her. However her [REDACTED] does not agree with this. Her present contraception is Femulen. She keeps forgetting to take this and does not like it as her weight is going up on it. She does not like Depo Provera for the same reason and refuses the coil because her [REDACTED] fell pregnant on it. She attends the Colposcopy Clinic in the Western Infirmary and she feels this is the last straw with regard to further family.

I explained to her the nature of the operation, its permanence, irreversibility and its failure rate and the importance about contraception at the time of operation. She was reviewed by Dr Hood who preferred to delay operation for 6 months, but will be happy to do it should Veronica come back at this time.

Yours sincerely

Patricia Hannay

The above named patient was seen at the colposcopy clinic here on the 17th February 1993.

Colposcopic examination was satisfactory as the upper limit of the transformation zone was seen.

Cytology was reported as mildly dyskaryotic with a viral infection.

Histology: Biopsy showed CIN2 and features of a viral infection.

The best treatment for this patient is laser treatment. I have made an appointment for her to have this done at the Western Infirmary as an out-patient.

Yours sincerely

As you will see from the enclosed report, referral for colposcopy has been advised.

We now have a diagnostic colposcopy session here (serviced from the Western Infirmary) and would like to offer this patient an appointment to attend here. If, when the result of the biopsy is known, treatment is required, this would be done at the Western Infirmary.

The patient has not yet been informed. We will notify her in two weeks when she will be sent an appointment for the colposcopy clinic. Please would you let us know if you would prefer to make your own arrangements.

Yours sincerely

Dear Dr. Herron,

re: Veronica Glancey, 26 Brighton Street, Glasgow, G51. DOB 4.6.69

This girl complained of a lump on her left lower eyelid. She thought it was related to a stone or foreign body going into her eye. Visual acuity was 6/9 in each eye with a pinhole. She had a chalazion on the left lower eyelid which was incised and curetted under local anaesthetic in the clinic. She was given Chloramphenicol ointment to use twice daily for a week. We will not need to see her again in the future.

Yours sincerely

Dear Dr Herron

RE: VERONICA GLANCY DOB (.04.06.69.)
27 ELPHINSTONE PLACE GLASGOW G51

Thank you for your letter about Veronica Glancy who I saw today. Her expected dates is the 30th of July, and thus the date of her shared care card is incorrect. She is thus 17 weeks pregnant, and this would be in keeping with her clinical size. Doptone is positive.

I note she is taking considerable analgesics, sometimes up to 10 Aspirin plus Anadin. I note her social circumstances. I wonder whether the Community Midwives attached to your practice might be able to see her.

I have not arranged to see her again for 18 weeks' time. I think she might need considerable social help.

With kind regards
Yours sincerely

P McEwan

Dear DR Lindsay

VERONICA GLANCY DOB 4.6.69
6 CRAIGPARK STREET GLASGOW

Mrs Glancy was admitted to the Gynaecology Unit at the Southern General Hospital on 5 February 1988, 6 weeks after a normal vaginal delivery of a female [REDACTED]. Her complaint was of continuous vaginal bleeding since delivery and intermittent abdominal pain for 3 to 4 weeks prior to admission.

On admission she was well and examination revealed no obvious abnormality. An ultrasound scan was performed and this revealed no retained products of conception. A diagnosis of probable endometriosis was made and because of this Veronica was commenced on Cephradine and Flagyl. Veronica seemed to be much better the following day and was well enough to be discharged home on her antibiotics.

No further follow-up has been arranged.

Yours sincerely

Dear Dr. Herron,

Veronica Glancy, (49 Forth Street, Glasgow,) 29 Rye Crescent, Barmulloch.

Thank you for your letter about this wee girl. I was pleased to see her at my ante-natal clinic on the 4th June.

She is about 11 weeks pregnant and sonar showed a normal continuing pregnancy of the correct gestation. Her blood pressure was 120/70 mm.Hg. I have arranged to see her again in 5 weeks time to check her alphafeto-protein.

I will be pleased to share her care.

Yours sincerely,

J. CARTY

Thank you for seeing this 17 year old para 0 + 0 registered with me on 30th April '87 and requesting referral for antenatal booking. *BP 110/60*

Her LMP was 6.3.87 and had a pregnancy test done at the F.P. Clinic. She is at present a single [redacted] and has no intention of marrying the father of the child. She apparently smokes 20 per day and occasional alcohol. Past Medical History - nil of note. She is on no medication. I would like to share her antenatal care.

Dear Dr Cathcart

Veronica Glancy (4 6 69)
Snowdon [REDACTED] Stirling
220912

Further to my letter of 16th May, this girl's audiogram has been reviewed and again has shown an apparent bilateral conductive deafness. However, she did not seem to be deaf in ordinary conversation and her tympanic membranes appeared normal. I have invited her to return again in three months' time.

To-day she was accompanied by an adult who was not able to give much information about the child's ability to hear. I think a child of this age should be accompanied to the clinic by someone who can give a personal account of the girl's illnesses, e g, a housemother or social worker who is intimately involved with her.

Yours sincerely

Robert M. Pettigrew

Dear Dr. Cathcart,

Veronica Glancy (4.6.69)
Snowdon [REDACTED] Stirling
220912

Thank you for referring this girl who attended the clinic today unaccompanied. She complains of pain in both ears. The symptoms have been present for a long time. She does not know how long.

On examination both tympanic membranes were normal. Nasal passages were healthy apart from some crusting of the septum. The presence of normal tonsils was noted. Audiogram has shown an apparent bilateral conductive deafness. In view of the normal appearance of the tympanic membrane I wonder about the validity of the audiogram. I have invited her to return again in two months' time. It think it would probably be in her best interest that she be accompanied by a responsible adult for her next visit.

Yours sincerely,

[REDACTED] M. PETTIGREW

Dear Dr Loudon

Veronica Glancy (4.6.69)
Snowdon [REDACTED] Stirling

Further to my recent letter about this girl, she attended the out-patient cystoscopy clinic today. The cystoscope passed quite easily into the bladder. The proximal urethra was inflamed but the trigone was not. The trigone itself was well developed and both ureteric orifices were in their normal position. The bladder was of normal capacity and appearance.

I think Veronica has had an episode of urinary tract infection which has now passed. This will have left the residual inflammatory appearances of the proximal urethra. At interview before cystoscopy she said that she was now dry and did not have any problems during the day. This was confirmed by the attendant from the Snowdon [REDACTED] I do not think there is any problem here in the physical way so no further appointment is given for this unit.

Yours sincerely

Dear Dr Loudon

Veronica Glancy (4.6.69)
Snowdon [REDACTED] Stirling

This girl was seen by my Registrar in my absence on 15 July. She has apparently been a lifelong enuretic although the history was as judged from his notes rather difficult to get. There has been a recent increase in her problems in that she is now troubled during the day. Her urine taken on the day of her appearance was sterile and there were no cells on microscopy. Her VP and micturating cystogram are essentially normal.

I will be seeing her at the out-patient clinic quite soon.

Yours sincerely

Dr. J. Leishman,
7 Park Terrace,
Stirling.

Dear Dr. Leishman,

Veronica Glancy (4.6.69)
Snowdon [REDACTED] Spittal Street, Stirling

Thank you for referring this young girl to Mr. [REDACTED] clinic. As you say it is difficult to get a true story from her. I note that she had problems with nocturnal enuresis which stopped, but recently she has had problems with incontinence of urine both during the day and night. This is not related to any stress or strain and she tells me that occasionally she is dry during the day time. Apparently she had investigations for urinary problems during her childhood in the Southern General Hospital, Glasgow, but no details are available.

On clinical examination her general condition is quite satisfactory. There is no evidence of any neurological abnormality in her spine or lower limbs. Examination of the abdomen was negative. I am arranging the following investigations for her: MSSU, full blood count, ESR, urea and electrolytes, IVP and cystoscopy.

I will let you know the progress in due course.

Yours sincerely,

M. P. Thyagarajan
Surgical Registrar

Dr. R.J. Brown
Health Centre
7 Park Terrace
Stirling

Dear Dr. Brown

Veronica Glancy, 4.6.69
Snowdon [REDACTED] Spittal St., Stirling.

Thank you for your letter of March 15 about this girl whom I saw two days ago. With her present glasses she only obtains 6/9 vision in each eye and I suspect that the glasses may need up-dating. In her right eye there is very striking fibroglial tissue emanating from the optic disc over the surface of the retina towards the upper half of the posterior pole and tracking down from this there is a slight secondary macular pucker causing very fine folds in the inner surface of the retina. I agree that this is probably benign and static. The cause is somewhat speculative and although some congenital optic disc and adjacent abnormalities may resemble this I rather suspect the cause of this is trauma which she received to the eye about two years ago.

Inflammatory aetiology is also a possibility.

Whatever it is there is no treatment which can or should be contemplated and I will be seeing her again in due course to have her glasses checked and a photograph taken as the best record of the condition in the right eye.

Yours sincerely

Diagnosis: Ophthalmia Neonatorum

Dear Dr. [REDACTED]

Veronica Glancy, d.o.b. 4/6/69
20, Tarland Street, Glasgow, S.W.1.

This child was referred from the Southern General Hospital on the 7th of June with a history of "sticky eye" since the age of 2 days. She had been on chloromycetin eye drops before admission to this hospital.

On examination there was bilateral palpebral ophthalmia affecting mainly the right eye. This was treated with systemic and topical penicillin and there was initially a good response. However, there persisted a slight degree of discharge and chloramphenicol eye drops were instilled daily for 4 days; a growth of E. Coli was sensitive to this antibiotic. Tests for neisseria gonorrhoeae and bedsonia were negative. The child was discharged on the 17th of June.

Yours sincerely,

J.A. Smith
Registrar
Dr. J. W. Penketh

Dr. [REDACTED]

Re: Veronica Glancy,
20 Tarland Street, S.W.1.

This patient of yours who was admitted here on the 8th
of November was discharged home on the 10th.

The child had swallowed some paraffin from a small
paraffin lamp but fortunately vomited quite quickly. After
admission there were some signs suggestive of mild bronchitis
in her chest and she was treated with Ampicillin. Her chest
however was practically clear on dismissal and she was sent
home to continue Ampicillin 125 mgs. 6 hourly for a further
3 days.

Kind regards,

Yours sincerely,

D. H. Wallace
