Dear Sir/Madam

Subject Access Request under the General Data Protection Regulation

Patient: ANN MATHERS **D.O.B: 14/10/1978**

Thank you for your request received 30th April in which you seek a copy of your client's personal information.

Your request has been dealt in line with our requirements under Article 15 of the General Data Protection Regulation and I now attach the following:-

ROYAL ALEXANDRA HOSPITAL MEDICAL RECORDS

Please be aware that these health records have been reviewed by a clinician and any information identifying or provided by a third party has been removed.

We process personal information to enable us to provide healthcare services for patients; support and manage our employees; to carry out research and clinical trials; maintain our accounts and records and to carry out data matching under the national fraud initiative. We also use CCTV systems for crime prevention.

This personal information can be both clinical and non-clinical in nature, and can include:-

- patient health records, photographs or Radiology images;
- video/telephone recordings, including CCTV images;
- Witness Statements;

- Incident reports
- Complaints files
- Emails

The source of our data includes patients, General Practitioners, healthcare, social and welfare organisations, legal representatives and police forces.
We sometimes need to share the personal information we process with the individual themselves and also with other organizations as listed above. Where this is necessary we are required to comply with all aspects of the General Data Protection Regulation.

Where these organisations are based outside Europe we take all appropriate safeguards to protect your information.

Health records are kept for a limited time and this is noted below for your information:

- Adult general hospital records – six years after the date of the last entry;
- Maternity records – 25 years after the birth of the last child;
- Children's and young people's records – until the child or young person's 25th birthday;
- Mental health records – 20 years after the date of the last contact.

If you have any queries, please do not hesitate to contact me.

If you are unhappy with how your request has been dealt with please contact the NHSGGC Data Protection officer. Their contact details are noted below:

Data Protection officer

NEWS should not replace sound clinical judgement. Any concerns regarding the patient's condition should be appropriately escalated and documented in the Nursing Notes.

See NEWS Actions Reference Tool for local escalation policy

NEWS Score	Frequency of Monitoring	Clinical Response
0	Minimum 12 hourly	• Continue routine NEWS monitoring with every set of observations.
Aggregate 1- 4	Minimum 4 hourly	• Inform trained nurse. • Trained Nurse assessment: - Assess the patient - Review frequency of monitoring required - Assess need for escalation of clinical care and direct as appropriate.
Aggregate 5 or more or 3 in one parameter	Increased frequency to a minimum of 1 hourly	• Trained Nurse assessment. • Inform medical team caring for the patient. • Urgent assessment by a medical / surgical / nursing team with core competencies to assess acutely ill patients. • Consider level of monitoring required in relation to clinical care.
Aggregate 7 or more	Continuous monitoring of vital signs	• Trained Nurse to assess immediately. • Inform medical team caring for the patient – this should be at least senior medical staff level. • Emergency assessment by a clinical team with core competencies in the assessment of critically ill patients. This team will have critical care competencies and a practitioner/s with advanced airway skills and resuscitation skills. • Consider referral to high dependency or ITU.

Dear Dr FJ O'Donoghue

Thank-you for your USC referral of the above patient. This referral has been triaged based on your patient's statistical risk of cancer and clinical information provided. This patient has been vetted for an Urgent Suspicion of Cancer Clinic Appointment. We aim to provide a date within 4 weeks. We are working hard to reduce waiting lists for all patients. Your patient remains at USC priority on the waiting list. If their clinical information changes, please submit an updated USC referral indicating what has changed.

Regards,

Endoscopy Service GGC

Urgency:	URGENT - SUSPECTED CANCER
Specialty:	General Surgery
Hospital:	Royal Alexandra Hospital

Dear Dr FJ O'Donoghue

Thank you for your USC referral of the above patient. This referral has been triaged based on your patient's statistical risk of cancer. From the qFIT and clinical information you have provided for this patient, they have a risk of colorectal cancer of 10% to 20%. In keeping with NHSGGC guidance, they have been put on the waiting list for a category 1 colonoscopy. This means the investigation carries the highest priority and we would aim to complete within 2-3 weeks.

We are working hard to reduce waiting lists for all patients. Your patient remains at USC priority on the waiting list. If their clinical information changes, please submit the updated USC referral indicating what has changed.

Regards,

Endoscopy Service GGC

CLINICAL INFORMATION

History of presenting complaint
Presenting complaint

Description: ongoing weight loss

Comment: Dear Colleague,

I would be grateful for your assessment of a 46-year-old patient who has been experiencing ongoing weight loss and fatigue. Her history has been somewhat complex due to multiple symptoms, making it challenging to pinpoint a clear pattern.

She primarily reports persistent abdominal pain, bloating, and a general sense of exhaustion. She has mentioned intermittent episodes of diarrhea, though the history is unclear, and she denies any blood in her stool. Additionally, she has had recurrent urinary tract infections around the same time, which has made it difficult to determine the exact source of her symptoms.

Further investigations revealed a raised qFIT of 160. Given this, I would be grateful if she could be reviewed and investigated further.

Many thanks,

Reason for referral

Presenting complaint

Description: Pregnant
Date of onset: 25-Jul-2012
Comment: Dear Doctor,

Thank you for seeing Mrs Mathers she is pregnant, she is para 2+2 although one of her children did succumb to sudden infant death syndrome as such she is rather nervous about everything and remains on Fluoxetine from a depressive point of view.

Her edd is 19/3/13 of which she is definite by dates and I would be most grateful if you could book her for delivery at Paisley.

If it is possible for her to have antenatal care at Clarkston this would be hugely advantageous.

Kind regards

Dr JA Tobias

8. Complete and apply pink section of Compatibility Label when transfusion commenced. If unit not transfused, record reason here and sign:

Part 4. Care during Transfusion

Frequency of vital signs (All observations to be recorded on patient's current MEWS / SEWS chart):

Temperature, pulse, blood pressure and respiration rate should be measured and recorded:

- before the start of each unit of blood or blood product.

The patient should be in an observed area during the transfusion as life-threatening reactions may occur. Where appropriate, patients / guardians should be informed of possible symptoms of a transfusion reaction, they should alert staff immediately if they feel unwell. Stop the transfusion and seek medical advice if you suspect a transfusion reaction. Symptoms can include pyrexia, urticaria, hypotension, and respiratory distress.

- at 15 minutes after commencement and hourly thereafter until the completion of each unit.
- further observations during the transfusion are at the discretion of each clinical area and dependent on the patient's condition.
- on the completion of each unit. This is a minimum requirement. Some clinical areas may require more frequent observations particularly in unstable or unconscious patients.

1. Record signature, date and time on the pink section of the compatibility label above.
2. Once transfusion has commenced, fully complete blue section of the compatibility label and return this to the HTL. Under the Blood Safety and Quality Regulations (2005) **THIS IS A LEGAL REQUIREMENT.**

Only staff who have completed transfusion training, available at *www.learnbloodtransfusion.org.uk* can participate in the clinical transfusion process.

TRAIN or REVALIDATE online at *www.learnbloodtransfusion.org.uk*

Additional Comments

Further advice on blood transfusion, including reactions is available on Staffnet at:

www.staffnet.ggc.scot.nhs.uk/Acute/Diagnostics/BloodTransfusion/Pages/BloodTransfusion.aspx

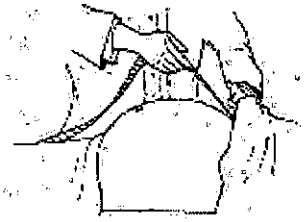
Fundal height (cm)						26						35		37cm					
For growth scan?						NO													
Scan EFW result (g)																			
Signature						SB						RW		MM					

The GROW chart (Gestation Related Optimal Weight) is customised for the characteristics of each pregnancy.

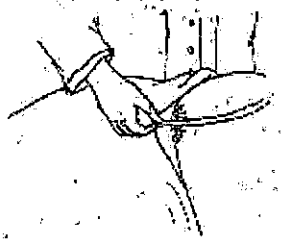
The centile lines provide the reference curves (not absolute values) for the expected growth velocity of fundal height and fetal weight.

Fundal height measurements to monitor growth: Should be done every 2-3 weeks, from 26 or 28 weeks gestation onwards; preferably by same care provider; mother semi-recumbent; bladder empty.

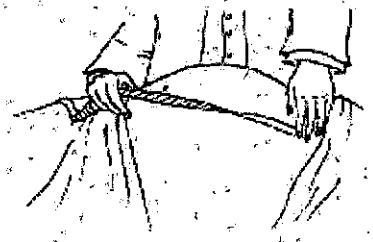
Hold end of non-elastic tape at top of uterine fundus.



Lead the tape down to top of symphysis pubis.



Measure along longitudinal uterine axis and plot on chart.



Referrals for growth scan* should be arranged if:
- the first fundal height measurement plots below 10th centile line on the customised chart
- consecutive measurements suggest NO growth (static or flat curve), or
- SLOW growth (curve not following slope of any curve on the chart); or
- EXCESSIVE growth (curve steeper than any curve on the chart) **.

* Ultrasound biometry for estimated fetal weight (EFW) and amniotic fluid assessment (plus Doppler flow if scan suggests growth problems).
** A first measurement above the 90th centile line does NOT need referral for scan, unless there are other concerns - e.g. polyhydramnios.

If result of ultrasound assessment is: **Normal >> revert to serial fundal height measurement.**
Abnormal >> refer for urgent obstetric review.

For GROW training & accreditation, please contact grow@pi.nhs.uk

12/3/13		Written In Retrospect due to rapid delivery
	1700	Reg into room to assess. Call buzzer had been pulled due to small trickle and blood clots passed. FH 122bpm. Early decelerations evident on CTG — ODNALOSEN
	1705	VE by Reg. 8cms dilated, ARM performed. Clear liquor draining —
	1709	FSE connected. —
	1710	VE Fully Dilated. —
	1712	FSE not working properly. FH 62bpm. Transducer changed back to external. —
	1714	Vertex delivered —
	1715	SVD of live male. Cried at birth —
	1718	Syntocinin 10IU administered IM by Reg. after delayed cord clamping —
	1722	Placenta and membranes delivered by CCT. Fresh trickle post delivery of placenta. Call buzzer pulled. Uterus well contracted at present —
	1725	S/R McManus into room, further trickle of blood evident, fundus was relaxed, but now firm —
	1730	Inspection of perineum 2° Tear evident, not actively bleeding, discussed with SR McManus, plan not to suture, Ann happy with this —
	1735	Postnatal observations as charted Fundus well contracted, lochia minimal —
	1745	Baby passed meconium. Baby examination carried out. Vitamin K administered. Baby given AF —

Maternal Weight (Kg) 80.6 kg
Sample Date: 06/09/2012
NT Date: 06/09/2012 **NT Gestation:** 12 Weeks 0 Day

Laboratory number: 307123
Sample taken by: C SUTHERLAND
Gestation at sample: 12 Weeks 0 Days

Standard (2)

Results:	Test name	Conc.	Unit	MoM (Corrected for maternal weight and smoking status if given)
Maternal Serum	FβhCG	12.0	IU/l	0.33
Nuchal Translucency	NT	1.9	mm	1.36
Maternal Serum	PAPP-A	1174	mIU/l	0.90

Combined chance of Down's syndrome at term: <1 in 20000

Comment:
The nuchal translucency measurements and FbhCG and PAPP-A results, together with maternal age (see above) give a chance of Down's syndrome which is LOWER than the cut-off of 1 in 150. No further action is indicated

Remarks:

Date: 07/09/2012 **Signature:** Clarkson

Interpretation of results is only valid if date of sample/NT, Date of Birth, maternal weight, smoking status and other relevant information are correct.

Getting it right for every child (GIRFEC)

Giving you, your baby and your family the best possible start in life is a priority for all the services who are working closely together using the Getting It Right for Every Child (GIRFEC) programme. GIRFEC is used to assess and understand how best to meet your needs and your baby's needs. The practice model below shows some of the things that are important to help you and your baby grow and develop. Your Midwife, Health Visitor/ Public Health Nurse will explain how this works and how they will work with you to make sure that both you and your baby receive the help and support you require.

The principles of GIRFEC include

- The use of the wellbeing indicators – Safe, Healthy, Achieving, Nurtured, Active, Respected, Responsible and Included – to determine appropriate assessment using the My World Triangle.
- The My World Triangle assessment considers the strengths and pressures for the woman and family around the three domains – How I grow and develop, What I need from people who look after me and My wider world
- The use of the 5 GIRFEC questions
- Early assessment, early support, early intervention, multi-agency approach are key to implementing GIRFEC.
- Consider the woman's and family's strengths and pressures.

Maternity team staff should ask themselves

- What is getting in the way of this woman or baby's well-being?
- Do I have all the information I need to help this woman or baby?
- What can I do now to help this woman or baby?
- What can my service do to help this woman or baby?
- What help if any may be needed from others?

After considering all of the principles described above, it is important that any assessment includes the impact that factors may have on the child and family, and what the desired outcomes are. Therefore the plan for the child and family must include action to be taken and when a review is required. The GIRFEC approach is summarised in the National Practice Model below

The National Practice Model

Your combined pregnancy and postnatal record

This is your pregnancy/postnatal record. It contains important information that will be used to help you and your maternity care team plan care for you and your baby. You will usually be asked to carry your record during your pregnancy, as this will help communication between you and your maternity care team:

Some women may prefer not to carry their combined pregnancy/postnatal record. If you do not want to carry your record, please tell your midwife. Your midwife will arrange to hold your record for you, or for it to be kept at the maternity unit or your GP practice.

Please keep your record safe, confidential and protect it from damage. If you lose your record, please contact your midwife or maternity unit as soon as possible.

Please remember to take this record with you to all health appointments during your pregnancy. For example, whenever you see your midwife, GP, obstetrician, physiotherapist or when you go for an ultrasound scan. Nearer the time when your baby is due, you may want to carry your record with you when you go out and about.

Please feel free to write in your record where you see this symbol:

Your Record remains the property of your NHS Board. At the end of your maternity care it will be returned to the NHS Board where it will be stored safely. If you would like a copy of your completed record, please speak to your midwife or contact the data controller of the NHS Board responsible for your care. (There may be a small charge for this.)

Details about how your personal information is used by staff within NHSScotland can be found in the leaflet 'Confidentiality – it's your right'. This is available from your midwife, GP practice or on-line at http://www.hris.org.uk Follow the links on confidentiality, consent and having your say.

Local information

Your midwife or doctor will write details of local services below, e.g. antenatal clinic times, breastfeeding support groups and antenatal education sessions.

Supervisors of midwives are experienced practising midwives who have undertaken additional education and training to support, guide and supervise midwives. Supervisors of midwives develop and maintain safe practice to ensure protection of you, your baby and family. For more information on the role of the supervisor see www.nmc-org.uk. To contact a supervisor of midwives at your hospital speak to any midwife.

Please note that supervised students may be learning alongside the maternity staff who care for you. If you have any concerns or preferences about this, please speak to your midwife.

Plan of care for your pregnancy

This chart is used to record a plan of care for your pregnancy. Your midwife or doctor will tick the boxes to show when an appointment is due, where it will take place, and whether a blood test or ultrasound scan is planned. Details of each appointment can be written below.
If this is your first baby you will usually have 10 appointments, if you have had a baby before you will usually have 7 appointments. The first appointment may be sometime between 8 and 12 weeks.

When is your baby due? - Your "Estimated Date of Delivery" or EDD

This information is used to work out when your baby is due. This is called your estimated date of delivery (EDD). It is helpful to think of your EDD as a 'rough guide'. Most babies are born during the fortnight before, or the fortnight after your EDD.

Date of the first day of bleeding of your last menstrual period (LMP)? 12/6/12

How sure are you of this date? ☑ sure ☐ fairly sure ☐ not sure

Average number of days between the first day of each period (monthly cycle) —

Have you had any vaginal bleeding since your last menstrual period? ☑ No ☐ Yes

Had you been using any contraception? ☐ No ☑ Yes

Type IUCD Date stopped 15/12

History taken by N WATSON

Date of Booking Appointment 23/8/12.

Agreed EDD 20/3/13

Use this EDD in all communication

Your body mass index (BMI) 29.6
(weight [kg]/height [m]²)

Weight at booking ~~85~~ 80.6kg Height 165 m

- For list of countries and areas with TB rates of >40 per 100,000 see www.hpa.org.uk and www.hps.scot.nhs.uk/tb-countries

CJD or vCJD

Have you ever been notified that you are at increased risk of CJD or vCJD for public health purposes? No ☐ Yes ☐

Other health-related questions to be discussed with maternity team staff

	No	Yes	Details of information given		
Have you been taking folic acid?		✓	☐ Pre-conception ☑ Before 12 weeks ☐ After 12 weeks	Dose of folic acid	(400mcg) 5mg
Vitamin D (10 mcg/day),			Healthy Start vitamins No ☐ Yes ☐	Other vitamins/supplements No ☐ Yes ☑ PRENATAL.	
What do you know about healthy eating during pregnacy?		✓	Do you have any special dietary needs?	NO.	
Dietetic referral made					

See Ready Steady Baby for foods you can eat and foods to avoid: www.readysteadybaby.org.uk.
Vitamin D is needed to keep bones and teeth healthy. You should take supplements containing 10mcg of vitamin D every day throughout pregnancy and whilst breastfeeding. This is particularly important if you have dark skin or cover your skin.

What do you know about the benefits of physical activity in pregnancy		✓	Advice given Further information is available from www.takelifeon.co.uk
Do you go to the dentist regularly?		✓	

NHS Dental care is free throughout pregnancy and for 1 year following birth. It is recommended you attend the dentist regularly as gum disease is more common in pregnancy and may require treatment.
If you have troublesome vomiting in early pregnancy please wait 30 minutes after vomiting before brushing your teeth, this will cut down on tooth erosion.

Are there any health and safety issues related to your work?	✓		Advice given www.hse.gov.uk
What do you know about drinking alcohol in pregnancy?	✓		
How many units of alcohol did you drink each day before you were pregnant? Number 8-10	How many units of alcohol a day are you drinking now? Number 0 How many units of alcohol do you drink in an average week? Number 0 If drinking where are you drinking, at home, in clubs/pubs		

The Chief Medical Officer for Scotland's current guidance is to avoid alcohol completely if pregnant or trying to conceive.
One unit of alcohol = half a pint of 3.5% beer or lager or one 25ml measure of spirits. One small (125ml) glass of average strength (12% wine) contains 1.5 units.
If unsure of units - ask type and amount of alcohol drunk e.g. wine, spirits, beers, alcopops
Consider delivering brief intervention. Refer to Alcohol brief interventions antenatal professional pack

What do you know about smoking in pregnancy?

Have you smoked in the 12 months prior to pregnancy?		✓	CO level 7 Date 23.8.12.
Do you or anyone in the household currently smoke?	✓		We encourage you to keep your baby smoke free before and after birth
Are you interested in getting help to stop?		✓	Current smokers: cigarettes smoked per day Number
Referral made to smoking cessation service		✓	Consider delivering brief intervention
Have you used any street drugs, gas or glue in the last year?	✓		Substances used
If yes, are you currently using any street drugs, gas or glue?			
Have you ever injected drugs?			
Does your current partner use any street drugs, gas or glue or inject drugs?	✓

Consent for blood and other tests offered in pregnancy (Blood Group, Full Blood Count & Infectious Diseases)

I have received the information leaflet *'Your Guide to Screening Tests During Pregnancy'* and have had an opportunity to discuss the tests I am being offered with a health professional. I understand the reasons for the tests and the consequences of the results. I also understand the significance of not having these tests performed. I am aware that my decision whether or not to have these tests will not affect the quality of care delivered by health care professionals during my pregnancy.

☑ I wish	☐ I do not wish to be tested for Blood Group antibody screen	
☑ I wish	☐ I do not wish to be tested for Full Blood Count	
☑ I wish	☐ I do not wish to be tested for Rubella status	
☑ I wish	☐ I do not wish to be tested for Syphilis	
☑ I wish	☐ I do not wish to be tested for Hepatitis B	
☑ I wish	☐ I do not wish to be tested for HIV	
☑ I wish	☐ I do not wish to be tested for Haemoglobinopathies	Partner requires testing Yes ☐ No ☐
☐ I wish	☐ I do not wish to be tested for blood glucose levels	
☐ I wish	☐ I do not wish to be tested for	
☐ I wish	☐ I do not wish to be tested for

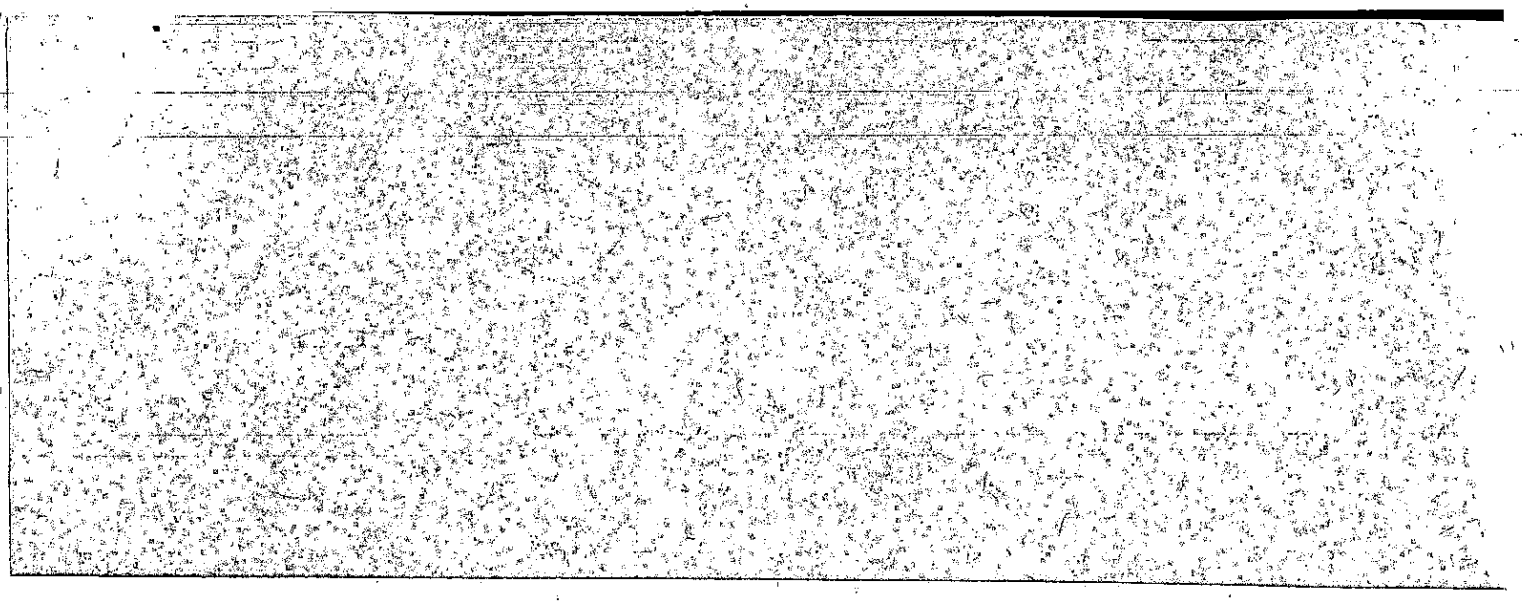
Version



Screening tests in pregnancy

During your pregnancy you will be offered several tests to check on your baby's health. These include ultrasound scans and may include blood tests to screen for risk of fetal abnormalities including Down's Syndrome and Spina Bifida.

Your local maternity team will explain what ultrasound scans will be offered to you and you will be asked to complete the appropriate consent for these tests.

The ultrasound scans you are likely to be offered by your local maternity services are (tick as appropriate):

- ☑ Dating scan
- ☑ Nuchal translucency scan 11-13 weeks
- ☑ Fetal anomaly scan
- ☐ Detailed scan at ..... weeks
- ☑ Growth scan as required
- ☐ Placental site scan as required
- ☐ Other

Consent for screening tests offered in pregnancy (Down's Syndrome)

☑ I wish ☐ I do not wish to be screened for the risk of Down's Syndrome

Signature: Ann Mathers Date 23/8/12

Witness: N Watson N WATSON (Health professional)

(Please sign and print name)

Designation: S.M Date 23/8/12

For more information on the national screening programmes see www.nsd.scot.nhs.uk

Tests during pregnancy

During your pregnancy you will be offered several tests to check on your health and your baby's health. Your midwife will give you information leaflets on many of these tests. Maternity care staff will discuss all the tests with you. When you are sure that you understand about the tests, you will be asked if you want to have them done or not, and your wishes will be followed. For some of the blood tests you will be asked to sign a consent form.

Maternity care staff will tell you how to find out the results of any tests that you have. They will also organise any follow up care that may be needed.

Results should be filed in accordance with your NHS board's policy.

Test	Gestation when test(s) taken	Date taken indicate if declined	Results/Action
Blood Group at booking		23.8.12.	
Antibody screen - 28 weeks			
Full Blood Count - booking		23.8.12

Your preferences for labour and the birth of your baby

Please use the section below to write down your preferences for labour and birth.
Alternatively you may wish to attach your own birth plan here. Plans for labour and birth will be individual. They depend on your wishes, your health, your circumstances and what is available at your maternity unit or in your home. You will probably find it helpful to discuss these issues with your birth partner, your midwife, and/or members of your maternity care team during your pregnancy.

During labour, members of your maternity care team will read this section and discuss it with you so they understand your preferences. However you may need to keep an open mind if complications arise for you or your baby. If this happens, your midwife or doctor will discuss events with you and your birth partner. They will be able to inform you of your options in your particular circumstances.

How do I feel about labour and birth?
What are my expectations?

Who do I want with me during labour and birth?

My environment for labour and birth
Things I might want to consider: privacy, quiet, my own music, food and drink, lighting, comfort aids such as pillows, bean bags, chairs or a mattress.

If everything is straightforward, how do I want my baby's heartbeat to be monitored during labour?
e.g. at intervals with a hand-held 'doppler' or ear-trumpet (Pinard stethoscope).
Do I understand when continuous electronic monitoring of my baby's heartbeat may be advised?

How will I cope with labour/contractions?
Things I might want to try: relaxation and breathing, changing my position, massage, water (shower, bath or water pool), complementary therapies, a T.E.N.S. machine, 'gas and air', injection of a morphine-related drug or an epidural? (Note: an epidural service is not available in all maternity units and at all times).

Vaginal examinations to assess my progress during labour
My feelings about these are:

How would I like to give birth?
My position for birth - kneeling, standing, squatting or sitting upright ?
Discovering the sex of my baby - do I want to find this out for myself?
Would I like my placenta to be delivered with or without an injection? (An injection often helps to reduce bleeding).

After my baby's birth
(Note: skin-to-skin contact with your baby is usually encouraged straight after birth)
Would I like my baby to have Vitamin K?

Other questions or special requirements that I have

If you have given birth before, you may want to think about your experiences. Please write down anything you would like your midwife or other maternity staff to know.

Discussion of preferences for labour and birth/issues arising
(Maternity care staff - please sign and date all entries)

Signature: ..... **Date** ../../..

Preparing for birth - what to pack in your bag

Here are some suggestions for what to take to the maternity unit. Please remember to take your Pregnancy Record, as it is very important. If you are having a home birth, your midwife will discuss other things that you will need to prepare.

For the birth	After the birth	
• comfortable clothes • music • snacks and drinks • toiletries • phone numbers • phone cards or change • camera •	• clothes/nightwear for you • underwear • maternity bra • sanitary towels • breast pads •	• clothes for going home • baby clothes – sleep suits, vests, scratch mitts, hats and shawl • nappies •
		Please note If you are travelling by car your baby will need a properly fitted car seat for all journeys.

Your notes and questions

Please use this page to write down any notes or questions

Your notes and questions (continued)

Please use this page to write down any notes or questions

Your postnatal care

The chart below is used to plan your postnatal care. Your midwife (and sometimes other members of your maternity team) will discuss and arrange your care with you, according to your needs and your baby's needs. Maternity staff will explain the reasons for each appointment or visit, as well as where it will take place, who with and when.

Hand hygiene is particularly important after childbirth. Please wash your hands in warm, soapy water before and after changing your sanitary towel and after every trip to the toilet.

You should be alert to signs of infection after childbirth. You should seek advice from your midwife, general practitioner or maternity hospital if you have any of the following:

- High temperature/feeling feverish/flu-like symptoms
- Sore throat – especially if other members of the family also have sore throats
- Breathlessness
- Abdominal or chest pain
- Diarrhoea and/or vomiting
- Severe headache

Studies have shown that the safest place for your baby to sleep is on their back, in a cot, in your room for the first 6 months. Side-sleeping or prone (tummy) sleeping is not advised (unless there is a medical reason for doing so). This is the most important thing you can do to reduce the risk of cot death. For further information speak to a member of the maternity team, ensure you have a copy of the leaflet "Reduce the Risks of Cot Death" or look online at www.scottishcotdeathtrust.org

Your postnatal appointments

Day	Date	Time*	Reason for visit/appointment	Where & who with

*For some home visits an approximate time or 'morning' or 'afternoon' visit may be given.

Your notes

Please use this space to jot down any notes or questions about your care or your baby's care.

Breastfeeding your baby

Breastfeeding your baby may be a new experience for you, or you may already have skills and confidence. This section contains items for discussion, observation and support as you breastfeed your baby. Your midwife and maternity care team will support you. When you and your midwife feel you are confident with the items, you can then sign them off to mark your progress.

Your copy of 'Off to a Good Start: All you Need to Know about Breastfeeding your Baby' provides sound advice that you and your partner can refer to. Please let your midwife know if you need another copy. Or visit www.healthpromotionagency.org.uk

Formula feeding your baby

As with general baby care, you may already be skilled in making up formula feeds and formula feeding your newborn baby, or it may be a new challenge. Your midwife and maternity care team will support you. The list below can be used to check that you feel confident formula feeding your baby. Please sign off the items when you feel ready.

Feeling confident with your baby

Whether you are a first time parent, or if you have experience of looking after new babies, there may be things that you want to discuss and practice with maternity care staff. The list below can be used as a starting point to ensure that you feel confident meeting your baby's needs. Please sign off the items when you feel ready. Remember there can be lots to learn, and it can be quite normal for this to take a while.

Don't forget that your 'Ready, Steady, Baby!' book contains useful advice and information that you and your partner/supporter can refer to. Or visit www.readysteadybaby.org.uk

	Discussed/demonstration Date/signed (staff)	I feel confident Date/signed (mum/partner)

Please remember that some health advice changes over time. Friends and relatives may be unaware of new guidance about preventing cot death. Please share your information with them to help keep your baby safe.

Your questions or concerns

Being a parent with a new baby can be challenging and exciting, but also tiring and stressful. The following section is for you to write in. Please jot down anything that you or your partner wish to discuss with your midwife/the maternity team caring for you. Here are some suggestions:

How I feel I am coping

My mood and emotions

How I feel I am doing as a parent

Not liking my baby at the moment

Difficulties with my baby's feeding

Managing my tiredness

Questions about my baby

Coping with my baby's crying

My anxieties

Relationships with my family

Thinking about your pregnancy, labour and birth

Pregnancy, labour, birth and the time afterwards are unique experiences. They can have a powerful effect on how you feel and your relationships with your baby, partner, family and your maternity care team.

Your midwife will ask you about your experiences in the early days following the birth. You may have questions that you want to ask or issues to discuss – or you may not. You may find it helpful to think about your experiences of maternity care so far, and discuss events with your partner or the person supporting you. Please use the space below to jot down any questions or issues to discuss.

Please remember that you can talk to any member of your maternity care team (such as your midwife, General Practitioner or obstetrician) about your experiences *at any time after the birth.* Some women wish to do this a few weeks, or even many months after the birth, or if they are thinking about becoming pregnant again.

Dear Dr Tobias

ANN MATHERS DOB 14.10.78 CHI 1410786102
14 MAYBOLE CRESCENT, NEWTON MEARNS

I saw your patient at the antenatal clinic on the 6 September 2012 and details of my findings are in her record card.

I will be happy to share her care with you and have asked her to return to the clinic in 19 weeks.

Special Remarks:

Ann is a 33 year old para 2+2 with an EDD by scan of the 20 March 2013. Her first child was born in 1997 and unfortunately was a cot death at 5 months of age. The baby was also IUGR being on the 2nd centile. Her second child was born in 1999 and was on the 10th centile. Both deliveries were SVD. We will therefore plan growth scans in the ~~first~~ third trimester. Ann is a smoker and she is aware of the significance of smoking in pregnancy and is trying to reduce. She has also been provided with information about smoking cessation. She knows the importance of not smoking in the house.

We are attempting to complete CUB screening today but anomaly scan has been arranged. Her early pregnancy had been complicated by threatened miscarriage but all is satisfactory on scan today. Smears are up-to-date and normal.

Best wishes.

Yours sincerely

Dr Judith Gemmell

CLINICAL INFORMATION

History of presenting complaint

Presenting complaint

Description: Pregnant

Date of onset: 25-Jul-2012

Comment: Dear Doctor,Thank you for seeing Mrs Mathers she is pregnant, she is para 2+2 although one of her children did succumb to sudden infant death syndrome as such she is rather nervous about everything and remains on Fluoxetine from a depressive point of view.Her edd is 19/3/13 of which she is definite by dates and I would be most grateful if you could book her for delivery at Paisley.If it is possible for her to have antenatal care at Clarkston this would be hugely advantageous.Kind regardsDr JA Tobias

INFORMATION REGARDING PATIENTS WHO WISH TO SMOKE

PATIENT NAME ..... Ann Mathers ..... D.O.B. 14/10/78

I have been advised by the nursing staff that NHS Greater Glasgow and Clyde, including this hospital operates a No Smoking Policy. This will be recorded within my nursing notes.

This means that smoking is NOT permitted within this hospital or hospital grounds. There are NO exceptions to this.

I am aware that if I leave the ward and grounds of the hospital to smoke that I will have to accept full responsibility for any adverse outcome.

The Organisation and its clinical staff will only be responsible for my care within the ward or department.

Support to stop smoking will be available to me if I wish to utilise this service.

Part 4. Care during Transfusion

Frequency of vital signs (All observations to be recorded on patient's current MEWS / SEWS chart):

Temperature, pulse, blood pressure and respiration rate should be measured and recorded:

- before the start of each unit of blood or blood product.

The patient should be in an observed area during the transfusion as life-threatening reactions may occur. Where appropriate, patients / guardians should be informed of possible symptoms of a transfusion reaction, they should alert staff immediately if they feel unwell. Stop the transfusion and seek medical advice if you suspect a transfusion reaction. Symptoms can include pyrexia, urticaria, hypotension, and respiratory distress.

- at 15 minutes after commencement and hourly thereafter until the completion of each unit.
- further observations during the transfusion are at the discretion of each clinical area and dependent on the patient's condition.
- on the completion of each unit.This is a minimum requirement. Some clinical areas may require more frequent observations particularly in unstable or unconscious patients.

1. Record signature, date and time on the pink section of the compatibility label above.
2. Once transfusion has commenced, fully complete blue section of the compatibility label and return this to the HTL. Under the Blood Safety and Quality Regulations (2005) **THIS IS A LEGAL REQUIREMENT.**

Only staff who have completed transfusion training, available at *www.learnbloodtransfusion.org.uk* can participate in the clinical transfusion process.

[illegible] available at www.learnbloodtransfusion.org.uk

Part 4. Care during Transfusion

Frequency of vital signs (All observations to be recorded on patient's current MEWS / SEWS chart):

Temperature, pulse, blood pressure and respiration rate should be measured and recorded:

- before the start of each unit of blood or blood product.

The patient should be in an observed area during the transfusion as life-threatening reactions may occur. Where appropriate, patients / guardians should be informed of possible symptoms of a transfusion reaction, they should alert staff immediately if they feel unwell. Stop the transfusion and seek medical advice if you suspect a transfusion reaction. Symptoms can include pyrexia, urticaria, hypotension, and respiratory distress.

- at 15 minutes after commencement and hourly thereafter until the completion of each unit.
- further observations during the transfusion are at the discretion of each clinical area and dependent on the patient's condition.
- on the completion of each unit.This is a minimum requirement. Some clinical areas may require more frequent observations particularly in unstable or unconscious patients.

1. Record signature, date and time on the pink section of the compatibility label above.
2. Once transfusion has commenced, fully complete blue section of the compatibility label and return this to the HTL. Under the Blood Safety and Quality Regulations (2005) **THIS IS A LEGAL REQUIREMENT.**

Only staff who have completed transfusion training, available at *www.learnbloodtransfusion.org.uk* can participate in the clinical transfusion process.

TRAIN or REVALIDATE online at *www.learnbloodtransfusion.org.uk*

Additional Comments

Further advice on blood transfusion, including reactions is available on Staffnet at:

www.staffnet.ggc.scot.nhs.uk/Acute/Diagnostics/BloodTransfusion/Pages/BloodTransfusion.aspx

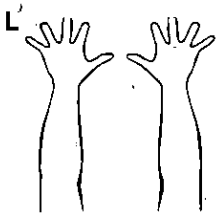
PVC Insertion Information

*Ensure the PVC dressing has **date** and **time** of insertion written on it. This implies that appropriate technique has been used for insertion.*



Date: 12/03/2013 **(See IV Dressing)**

Time: 1615

Reason for Insertion: APH

Flushed on insertion ☑ **(if known)**

Other Site: _____

PVC Maintenance Information

Modified V.I.P (Visual Infusion Phlebitis) Score

IV site appears healthy	0	No Phlebitis	**Observe Cannula**
ONE of the following is evident: - slight pain or redness near site	1	Possible first signs	**Observe Cannula**
TWO of the following are evident: - pain -redness - swelling	2	Early stage of phlebitis	**Re-site Cannula**
ALL of the following are evident: - pain - redness - hardening of the surrounding tissue	3	Phlebitis / Thrombophlebitis **Re-site Cannula & Seek Further Advice**	
As above including: - palpable venous cord	4		
As above including: - pyrexia	5		

Day 1 (24 hours after insertion)

All 5 questions below MUST be answered
The PVC must be monitored at least once per day

1. Continuing clinical indication for PVC?	Yes / No
2. VIP Score?	☐
3. PVC Dressing dry & intact?	Yes / No
4. Was PVC dressing renewed?	Yes / No / NA
5. Was PVC Removed?	Yes / No

Removal Reason: _____

Postnatal Assessment and Management

(to be assessed on Labour Ward)

1410786102
MATHERS F
Ann 14/10/1978
14 Maybole Crescent
Newton Mearns
Glasgow, Lanarkshire
G77 5SY

- Any previous VTE+ ☐
- Anyone requiring antenatal LMWH ☐

→ **High risk**
At least 6 weeks postnatal prophylactic LMWH

- Caesarean section ☐
- Asymptomatic thrombophilia (inherited or acquired) ☐
- BMI > 40 kg/m² * ☐
- Prolonged hospital admission ☐
- MEDICAL COMORBIDITIES, e.g. heart or lung disease, SLE, cancer, inflammatory conditions, nephrotic syndrome, sickle cell disease, intravenous drug user ☐
- appendicectomy ☐

→ **Intermediate risk**
At least 7 days postnatal prophylatic LMWH

Note: if persisting or > 3 risk factors, consider extending thromboprophylaxis with LMWH

- Age > 35 years ☐
- Obesity (BMI > 30kg/m²) * ☐
- Parity ≥ 3 ☐
- Smoker ☑
- Any surgical procedure in the puerperium ☐
- Gross varicose veins ☐
- Current systemic infection ☐
- Immobility, e.g. paraplegia, SPD, long-distance travel ☐
- Pre-eclampsia ☐
- Mid-cavity rotational operative delivery ☐
- Prolonged labour (> 24 hours) ☐
- PPH > 1 litre or blood transfusion ☐

→ 2 or more risk factors

→ < 2 risk factors

Lower risk
Mobilisation and avoidance of dehydration

Antenatal and postnatal prophylactic dose of LMWH - Drug of Choice in GGC is enoxaparin

* Drug calculations based on most recent weight

- Weight < 50 kg = 20 mg enoxaparin **or** 2500 units dalteparin **or** 3500 units tinzaparin daily ☐
- Weight 50–90 kg = 40 mg enoxaparin **or** 5000 units dalteparin **or** 4500 units tinzaparin daily ☐
- Weight 91–130 kg = 60 mg enoxaparin **or** 7500 units dalteparin **or** 7000 units tinzaparin daily ☐
- Weight 131–170 kg = 80 mg enoxaparin **or** 10000 units dalteparin **or** 9000 units tinzaparin daily ☐
- Weight > 170 kg = 0.6 mg/kg/day enoxaparin **or** 75 units/kg/day dalteparin **or** 75 units/kg/day tinzaparin ☐

Key

ART = assisted reproductive therapy, *BMI = body mass index (based on most recent weight), gross varicose veins = symptomatic, above the knee or associated with phlebitis/oedema/skin changes, immobility = ≥ 3 days, LMWH = low-molecular-weight heparin, OHSS = ovarian hyperstimulation syndrome, PPH = postpartum haemorrhage, SLE = systemic lupus erythematosus, SPD = symphysis pubis dysfunction with reduced mobility, thrombophilia = inherited or acquired, long-distance travel = > 4 hours, VTE = venous thromboembolism

Postnatal Assessment of Risk Factors

	Red High	Amber Intermediate	Green Low
Postnatal Assessment	☐	☐	☑

Drug Allergies / Sensitivities None Known ☑ Yes ☐ (provide details below)

Nurse/Midwife Administration by Symptomatic Relief Policy or other Protocol - Authorised Nurses/Midwives Only (Maximum number of doses as per protocol)

Warning: Check the As Required and Regular Prescription sections to ensure that the drug has not already been prescribed by a doctor.

DATE	DRUG	DOSE	ROUTE	TIME (24hr)	NURSE (PRINT & SIGN)	GIVEN BY	TIME GIVEN (24hr)

Notes for Users

FOR PRESCRIBERS:

1. Prescribe drugs generically using the Approved Name (except in circumstances where bioavailability differences between brands of the same drug are so important as to warrant prescribing by brand name e.g. in the case of sustained release lithium or theophylline).

2. All prescription entries must be legible and made so as to be indelible (black ink is recommended).

3. Print & Sign your full name clearly against each prescription entry.

4. Time should be recorded in 24hr format e.g. 0600, 1800.

5. When drugs are discontinued, draw a diagonal line through the prescription box, initial and date the appropriate boxes and record reason.

6. If an existing prescription entry is to be modified, delete the existing prescription and re-write the new instructions as a new prescription entry.

7. The following metric unit abbreviations must be used –

Milligram = mg — Gram = g
Millilitre = ml — Millimoles = mmol
Microgram / Nanogram / Units – **Do not abbreviate, write in full**

Fractions of a milligram should be written in micrograms. The use of decimal points should be avoided, if possible. If decimal points must be used a zero must be written in front of the decimal point (e.g. 0.5ml **NOT** .5ml).

8. The route of administration can be abbreviated using the following -

O	= oral	ID	= intradermal
IM	= intramuscular	SL	= sublingual
SC	= subcutaneous	PR	= per rectum
NG	= nasogastric	PEG	= percutaneous endoscopic gastrostomy
PV	= per vagina	RIG	= radiologically inserted gastrostomy
NJ	= nasojejunostomy	PEJ	= percutaneous endoscopic jejunostomy
TOP	= topical	ETT	= endotracheal
NEB	= nebulised	INHAL	= inhaled
IV	= intravenous		

Please note - Intrathecal **must be written in full.**

FOR NURSES

1. The 'Once only', 'Regular' and 'As required' sections should be checked at each administration round to ensure that inadvertent omission or double dosing are avoided.

2. Insert initials in the relevant date column and time row each time a drug is administered.

3. Check that all drugs prescribed at a certain time have been administered.

4. If a drug is not administered enter the reason code in the appropriate date column and time row and also document the full reason in the patient's notes.

Codes for Non-Administration of Drugs

(3) Patient refused
(4) Drug not available
(5) Nil by mouth/fasting
(6) Patient unavailable
(7) Patient asleep
(8) Time varied on doctor's instructions
(9) Dose withheld on doctor's instructions
(10) Nausea/vomiting
(11) Unable to swallow
(12) No intravenous access
(13) Patient Self-Administration of Medicine
(14) Other - Record in nursing notes
(15) Prescription clarification required

Variant Screening Status

Not Required

	Mother	Father
Known Carrier Sickle Cell		
Known Carrier Thalassaemia		
A. African or African Caribbean (Black)		
1. Caribbean Islands		
2. African		
3. Any other African or African-Caribbean family origins		
B. South Asian (Asian)		
1. Indian or African-Indian		
2. Pakistan		
3. Bangladesh		
C. South East Asian (Asian)		
1. China including Hong Kong, Taiwan, Singapore	#	#
2. Thailand, Indonesia, Burma	#	#
3. Malaysia, Vietnam, Philippines, Cambodia, Laos	#	#
4. Any other Asian family origins (e.g. Caribbean-Asian)		
D. Other Non-European (Other)		
1. North Africa, South America, etc		
2. Middle East (Saudi Arabia, Iran etc)		
3. Any other Non-European family origins		
E. Southern and Other European (White)		
1. Sardinia	#	#
2. Greece, Turkey, Cyprus	#	#
3. Italy, Portugal, Spain		
4. any other Meditteranean country		
5. Albania, Czech Republic, Poland, Romania, Russia etc		
. United Kingdom (White)		
1. England, Scotland, N Ireland, Wales	✓	✓
G*. Northern European (White)		
1. Austria, Belgium, Ireland, France, Germany, Netherlands		
2. Scandinavia, Switzerland etc		
3. Any other European family origins refer to chart (e.g. Australia, N America, S.A.)		
H. Don't Know (incl. pregnancies with donor egg/sperm)		
I. Declined to Answer		

*Hb Variant Screening Requested by F and/or G (i.e. request from low risk group)
Higher risk for alpha zero thalassaemia
